President's Commission for the Study of Ethical Problems in Medicine and Biomedical and Behavioral Research, 1982 **Engineering Genesis** Donald Bruce, Ann Bruce, 2014-01-27 Few issues have aroused so much public attention and controversy as recent developments in biotechnology How can we make sound judgements of the cloning of Dolly the sheep genetically altered foodstuffs or the prospect of transplanting pigs hearts into humans Are we playing God with nature What is driving these developments and how can they be made more accountable to the public Engineering Genesis provides a uniquely informed balanced and varied insight into these and many other key issues from a working group of distinguished experts in genetics agriculture animal welfare ethics theology sociology and risk brought together by the Society Religion and Technology Project of the Church of Scotland A number of case studies present all the main innovations animal cloning pharmaceutical production from animals cross species transplants and genetically modified foods From these the authors develop a careful analysis of the ethical and social implications offering contrasting perspectives and insightful arguments which above all will enable readers to form their own judgements on these vital questions Food and Agricultural Biotechnology in Ethical Perspective Paul B. Thompson, 2020-11-09 This 3rd edition of Food and Agricultural Biotechnology in Ethical Perspective updates Thompson's analysis to reflect the next generation of biotechnology including synthetic biology gene editing and gene drives The first two editions of this book published as Food Biotechnology in Ethical Perspective in 1997 and 2007 were the first comprehensive philosophical studies of genetic engineering applied to food systems The book is structured with chapter length treatments of risk in four categories food safety to animals to the environment and socio economic risks These chapters are preceded by two chapters providing orientation to the uses of gene technology in food and agriculture and to the goals methods and background assumptions of technological ethics There is also a chapter covering all four types of risk as applied to the first US technology recombinant bovine somatotropin The last four chapters take up 1 intellectual property debates 2 religious metaphysical and intrinsic objections to biotechnology 3 issues in risk and trust and 4 a review of ethical issues in synthetic biology gene editing and gene drives the three key technologies that have emerged since the book was last revised Source Book in Bioethics Albert R. Jonsen, Robert M. Veatch, LeRoy Walters, 1999-09-07 Government agencies and commissions courts and legislatures have during the past several decades produced reports rendered decisions and passed laws that have both defined the fundamental issues in the field of bioethics and established ways of managing them in our society Providing a history of these key bioethical decisions this Source Book in Bioethics is the first and only comprehensive collection of the critical public documents in biomedical ethics including many hard to find or out of print materials Covering the period from 1947 to 1995 this volume brings together core legislative documents court briefs and reports by professional organizations public bodies and governments around the world Sections on human experimentation

care of the terminally ill genetics human reproduction and emerging areas in bioethics include such pivotal works as The Nuremberg Code The Tuskegee Report and In the Matter of Baby M as well less readily available documents as The Declaration of Inuyama the Council for International Organizations of Medical Sciences statement on genetic engineering and The Warnock Committee Report on reproductive technologies from the United Kingdom Three eminent scholars in the field provide brief introductions to each document explaining the significance of these classic sources This historical volume will be a standard text for courses in bioethics health policy and death and dying and a primary reference for anyone interested in this increasingly relevant field Principles of Biotechnology and Genetic Engineering Dr. A.J.
