Genetic Consequences Of Dispersal And Social Behaviour In Lions Panthera leo:

Genetic Consequences of Dispersal and Social Behavior in Lions, Panthera leo Goran Spong, 2001 Behavioral and Genetic Consequences of Dispersal in the Spotted Hyena (Crocuta Crocuta) Russell Carl Van Horn, 2003 *Social Strategies of Carnivorous Mammalian Predators* Mridula Srinivasan, Bernd Würsig, 2023-09-18 The book offers a comparative look at the social strategies of five carnivorous social predators four terrestrial and one marine that make them successful hunting units. The focus is on mammalian predators hunting largely mammalian prey. Each chapter with separate authors devoted to a particular species explores the versatile hunting techniques and social dynamics of these top predators as they attempt to survive, defend and reproduce in challenging habitats. Each chapter also delves into how the social fabric and ecology of each species influence their ability to deal with natural and man-made threats and shifting baselines.

Walker's Carnivores of the World Ronald M. Nowak, 2005-01-07 Although they are highly intelligent, ruthless predators, carnivores are increasingly rare. From the dwarf mongoose to the polar bear, carnivores are at once respected and misunderstood, invoking both fear and curiosity in the humans with whom they share their world. Ronald M. Nowak celebrates these fascinating mammals in *Walker's Carnivores of the World*. This comprehensive guide featuring 225 illustrations covers the world's eight terrestrial families of carnivores. Each generic account comprises scientific and common names, number and distribution of species, physical attributes, measurements, hunting and social activity, reproduction, habitat, population dynamics, longevity, and status of threatened species. A thought-provoking overview by David W. Macdonald and Roland W. Kays is packed with results of the latest field and laboratory research on topics ranging from evolutionary history to the adaptive value of fur patterns. Emphasizing the interplay of social life, morphology and predatory behavior, it provides an up-to-date panorama of the world's carnivores.

Corridor Ecology, Second Edition Jodi A. Hilty, Annika T.H. Keeley, William Z. Lidicker Jr., Adina M. Merenlender, 2019-04-23 Migrating wildlife species across the globe face a dire predicament as their traditional migratory routes are cut off by human encroachment. Forced into smaller and smaller patches of habitat, they must compete more aggressively for dwindling food resources and territory. This is more than just an unfortunate side effect of human progress. As key species populations dwindle, ecosystems are losing resilience and face collapse, and along with them the ecosystem services we depend on. Healthy ecosystems need healthy wildlife populations. One possible answer: Wildlife corridors that connect fragmented landscapes. This new and expanded second edition of *Corridor Ecology: Linking Landscapes for Biodiversity Conservation and Climate Adaptation* captures the many advances in the field over the past ten years. It builds on concepts presented in the first edition on the importance and practical details of maintaining and restoring land connectivity. New to this edition is a guest-edited chapter on ecological connectivity in oceans, including a detailed discussion on pelagic marine corridors and how coastal corridors can provide critical connectivity between marine protected areas. Another new chapter considers the effects of climate change on habitat and offers recommendations on designing effective corridors as

landscapes change with shifting climate conditions The book also includes a discussion of corridors in the air for migrating flying species from birds to bats butterflies and even plant propagules a concept so new that a term to describe it has yet to be coined All chapters are thoroughly revised and updated Practitioners as well as serious scholars of landscape ecology and the science of protecting biodiversity will find this new edition of corridor ecology science an indispensable resource Wild Cats of the World Mel Sunquist,Fiona Sunquist,2017-05-15 Did you know that European royalty once used cheetahs to hunt deer or that caracals can capture birds by leaping six and a half feet straight up into the air from a standing start Have you ever wondered whether domestic cats really do land on their feet when they fall or how Canada lynx can stalk their prey in the winter without falling through the deep snow Wild Cats of the World is a treasure trove of answers to questions like these and many others for anyone who s interested in learning more about the world s felids including the ones with whom we share our homes Mel and Fiona Sunquist have spent more than a decade gathering information about cats from every available source many of them quite difficult to find including scientific papers descriptions of hunts archeological findings observations by naturalists and travelers reports from government agencies and newsletters from a wide variety of organizations Weaving information from these sources together with their own experiences observing wild cats around the world the Sunquists have created the most comprehensive reference on felids available Each of their accounts of the 36 species of cat contains a description of the cat including human interactions with it as well as detailed data on its distribution ecology and behavior status in the wild and efforts to conserve it Numerous photographs including more than 40 in full color illustrate these accounts Ranging from the two pound black footed cat to the five hundred pound tiger and from the African serval with its satellite dish ears to the web footed fishing cat of Asia Wild Cats of the World will fascinate and educate felid fans of any stripe or spot **The Mammals of the Southern African Sub-region** J. D. Skinner,Christian T.

Chimimba,2005-11-15 This comprehensive volume covers all mammals that occur naturally on the African mainland south of the Cunene and Zambezi rivers and also in the subregion s coastal waters Extensively revised and updated for the new edition it now includes the latest data from from mammal research in southern Africa along with the radical taxonomic changes across all levels of mammalian classification Containing contributions from specialists on each mammalian order each species description has been reviewed by a range of independent and internationally recognised authorities Along with the latest taxonomic information the distribution maps and illustrations have been updated and redrawn several new colour plates have been added and the whole design has been enhanced to aid access to key information This is the most comprehensive and up to date survey of southern African mammals and forms an essential reference for zoologists evolutionary biologists and anyone wanting an overview of the region s wildlife *Carnivore Conservation* John L. Gittleman,2001-06-28 Carnivores are the focus of intense attention and resources in conservation biology It is often argued that because carnivores are at the top of the food chain if they are protected then other taxa will also be afforded adequate

protection Carnivores are also charismatic and compete with humans for dwindling space and environmental resources In the past 10 years theoretical and empirical studies on carnivores have developed very quickly This volume reviews and summarises the current state of the field describes limitations and opportunities for carnivore conservation and offers a conceptual framework for future research and applied management As such it will be of interest to students and researchers of conservation biology mammalogy animal behaviour ecology and evolution *The Biology and Conservation of Wild Felids* David Macdonald, Andrew Loveridge, 2010-06-03 The editors utilize their 50 years of combined experience in professional engagement with the behaviour and ecology of wild felids to draw together a unique network of the world's most respected and knowledgeable experts For the first time this interdisciplinary research programme is brought together within a single volume Beginning with a complete account of all 36 felid species there follow 8 comprehensive review chapters that span all the topics most relevant to felid conservation science including evolution and systematics felid form and function genetic applications behavioural ecology management of species that come into conflict with people and control of international trade in felid species conservation tools techniques ex situ management and felid diseases 19 detailed case studies then delve deeply into syntheses of the very best species investigations worldwide written by all the leading figures in the field These chapters portray the unique attributes of the wild felids describe their fascinating and conflicting relationship with humans and create an unparalleled platform for future research and conservation measures A final chapter analyses the requirements of and interdisciplinary approaches to practical conservation with cutting edge examples of conservation science and action that go far beyond the cat family *Forthcoming Books* Rose Arny, 2002-02 **Cats of Africa** Luke Hunter, 2006 Cats of Africa behaviour ecology and conservation **PRIDES: LIONS OF MOREMI** CL Pieter W. Kat, 2000-03-17 Illustrated with two hundred color photographs of lions at every stage of their lives this striking volume reveals the worlds of four neighboring prides that roam the diverse habitats swamps seasonal rivers dry floodplains acacia forests and thick woodland of Botswana's Okavango Delta Drawing on continuing field research begun in 1995 Pieter Kat shows how Okavango lions challenge long held assumptions about sociability mating strategies and hunting techniques Pride males will readily mate with females from other prides sometimes even abandoning their original group females often leave their offspring vulnerable to predators and as hunters lions are more prone to mistakes and scavenging than is commonly believed BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved **Terrestrial Mammal Conservation: Global Evidence for the Effects of Interventions for Terrestrial Mammals Excluding Bats and Primates** Nick A. Littlewood, Ricardo Rocha, Rebecca K. Smith, Philip A. Martin, Sarah L. Lockhart, Rebecca F. Schoonover, Elspeth Wilman, Andrew J. Bladon, Katie A. Sainsbury, Stuart Pimm, William J. Sutherland, 2020-11-30 Terrestrial Mammal Conservation provides a thorough summary of the available scientific evidence of what is known or not known about the effectiveness of all of the conservation actions for wild terrestrial mammals across the world excluding bats and primates

which are covered in separate synopses Actions are organized into categories based on the International Union for Conservation of Nature classifications of direct threats and conservation actions Over the course of fifteen chapters the authors consider interventions as wide ranging as creating uncultivated margins around fields prescribed burning setting hunting quotas and removing non native mammals This book is written in an accessible style and is designed to be an invaluable resource for anyone concerned with the practical conservation of terrestrial mammals The authors consulted an international group of terrestrial mammal experts and conservationists to produce this synopsis Funding was provided by the MAVA Foundation Arcadia and National Geographic Big Cats Initiative Terrestrial Mammal Conservation is the seventeenth publication in the Conservation Evidence Series linked to the online resource www.ConservationEvidence.com Conservation Evidence Synopses are designed to promote a more evidence based approach to biodiversity conservation Others in the series include Bat Conservation Primate Conservation Bird Conservation and Forest Conservation and more are in preparation Expert assessment of the evidence summarised within synopses is provided online and within the annual publication What Works in Conservation

Biotechnology and the Conservation of Genetic Diversity H. D. M. Moore, W. V. Holt, Georgina M. Mace, 1992 The conservation of many endangered species will depend on active management plans for both wild animals and those bred in captivity A crucial factor is the maintenance of genetic variation in given populations to ensure that inbreeding effects are kept to a minimum This volume describes the rapid advances that have been made in reproductive biology and molecular genetics explaining the role and practice of reproductive technology in the breeding of rare and endangered animals in captivity Calling on both theory and example the authors highlight three major categories of biotechnology techniques for managing reproduction such as in vitro fertilization techniques for cryopreservation of reproductive material and embryos the frozen zoo and techniques for genetic analysis Both practical and ethical issues in captive breeding are explored here by scientists who are leading workers in the field The work is certain to be a valued resource for zoologists and conservation biologists concerned with issues of diversity and preservation

Proceedings ,2007 **Conserving Africa's Mega-Diversity in the Anthropocene** Joris P. G. M. Cromsigt,Sally Archibald,Norman Owen-Smith,2017-03-02 This book synthesises key insights from a century of ecological research and monitoring efforts in one of Africa s oldest protected areas *The Natural History of Inbreeding and Outbreeding* Nancy Wilmsen Thornhill,1993-08-15 Inbreeding the mating of close kin and outbreeding the mating of distant relatives or unrelated organisms have long been important subjects to evolutionary biologists Inbreeding reduces genetic diversity in a population increasing the likelihood that genetic defects will become widespread and deprive a population of the diversity it may need to cope with its environment Most plants and animals have evolved behavioral and morphological mechanisms to avoid inbreeding However today many endangered species exist only in small very isolated populations where inbreeding is unavoidable so it has become a concern for conservationists In this volume twenty six experts in evolution behavior and genetics examine the causes and consequences of inbreeding The authors ask whether inbreeding is as problematic as biologists have thought under what ecological conditions inbreeding occurs and whether organisms that inbreed have mechanisms to dampen the anticipated problems of reduced genetic variation The studies including theoretical and empirical work on wild and captive populations demonstrate that many plants and animals inbreed to a greater extent than biologists have thought with variable effects on individual fitness Graduate students and researchers in evolutionary biology animal behavior ecology and conservation biology will welcome this wide ranging collection *Mammal Societies* Tim Clutton-Brock,2016-05-31 The book aims to integrate our understanding of mammalian societies into a novel synthesis that is relevant to behavioural ecologists ecologists and anthropologists It adopts a coherent structure that deals initially with the characteristics and strategies of females before covering those of males cooperative societies and hominid societies It reviews our current understanding both of the structure of societies and of the strategies of individuals it combines coverage of relevant areas of theory with coverage of interspecific comparisons intraspecific comparisons and experiments it explores both evolutionary causes of different traits and their ecological consequences and it integrates research on different groups of mammals with research on primates and humans and attempts to put research on human societies into a broader perspective *American Doctoral Dissertations* ,1989
