Regulating Genetically Modified Crops in View of Environmental Risks Ancui Liu, 2022-05-25 This book analyzes international and Chinese regulatory approaches addressing environmental risks that may be caused by GM crops and examines how China implements its international obligations in its policies and laws Using the legal doctrinal method the book discusses the precautionary principle and the public involvement principle as well as several legal measures at the international law level and in Chinese law It observes that legal principles and measures as provided for in China's GMO legal framework have generally implemented the international obligations regarding the prevention of environmental risks that may be caused by the cultivation of GM crops and related activities However the book argues that Chinese law lacks an explicit codification of the precautionary principle and the same is true with regard to public participation the regulatory

framework lacks specific obligations It concludes that future research should focus on the application and enforcement of the relevant Chinese legislation and that it is also important to investigate how the environmental risks that may be caused by new techniques such as genome editing techniques could be prevented given the experience gained by regulating the cultivation of GM crops and related activities Biotechnology and Agricultural Development Rob Tripp,2009-06-02 The controversy over genetically modified GM crops in industrialized countries is paralleled by a loud debate over their potential role in developing countries with supporters claiming that GM crops are the best hope for reducing rural poverty and hunger and opponents predicting that they can only bring corporate control of peasant agriculture and environmental disaster This book offers an examination of the performance of the new technology in the broader context of the agricultural institutions that govern its generation *Market Development for Genetically Modified Foods* V. Santaniello,Robert E. Evenson,David Zilberman,2002-03-06 The investment climate for firms producing genetically modified GM agricultural products has recently experienced considerable change with the occurrence of remarkably high rate of farmer acceptance but considerable consumer resistance The present system that involves firms developing biotech products farmers producing the products food and related agribusiness industrial firms and consumers of food is very volatile This however will soon be affected by changes in regulatory trade and food safety regimes This book addresses these key issues and is based on papers presented at the fourth meeting of The International Consortium on Agricultural Biotechnology Research ICABR on Economics of Agricultural Biotechnology held at Ravello Italy in August 2000 Organized in four parts this volume focuses on Consumer reactions to GM food informationRegulatory issuesFarmer acceptance of biotech productsChanges in industrial organization in life science and food sectors Genetically Modified Plants Roger Hull,Graham Head,George T.
