## Genetics And Alcoholism:

The Genetics of Alcoholism Henri Begleiter, Benjamin Kissin, 1995 This volume provides an in depth look at the genetic influences that contribute to the development of alcoholism Part I Epidemiologic Studies contains five chapters that examine the various approaches employed in the study of the genetics of alcoholism It provides a historical perspective and details all the essentials of this subject Part II Selective Breeding Studies highlights the results of research involving the selective breeding of rodents This type of research has produced homogenous strains exhibiting specific behavioral responses considered significant in the development and maintenance of alcohol dependence The studies presented in Part III Phenotypic Studies investigate and analyze phenotypic markers that serve as correlates to the genotypic determinants of alcoholism Through its broad scope this volume provides for the first time a panoramic view of the knowledge available on the hereditary influences of alcoholism Genetics and Biology of Alcoholism C. Robert Cloninger, Henri Begleiter, 1990 These proceedings from the conference of Fall 1989 evaluate the obstacles and challenges of searching for the specific genes influencing risk of alcoholism Coverage includes genetic and environmental risk factors neurobiological markers of risk animal models and candidate genes for alcoholism a **Biological Research on Addiction** Howard J. Crabbe Jr., R.A. Harris, 2013-11-11 HISTORICAL BACKGROUND The use of genetic animal models in neuroscience and biomedical research is showing dramatic growth The earliest application of these models to research on drug mechanisms was in the area of alcohol research Mardones 1951 reported successful selective breeding of rats preferring and not preferring to drink alcohol under various conditions of dietary deficiency suggesting genetic control of alcohol drinking McClearn and Rodgers 1959 1961 described differences among inbred mouse strains in preference for 10% ethanol solutions versus tap water Active exploration of this phenomenon continued until the early 1970s eventually spawning the entire range of alcohol genetic research reviewed in Chapters 2 and 3 of this volume Notably oral alcohol self administration has served as the basis for the development of several rat lines bred for preference or aversion and these lines are very actively being investigated The pioneering research of Dr McClearn and others was very wide ranging in its conceptual scope and at least touched on all issues currently under intense investigation The basic approach was to identify high and low preferers among inbred strains of mice and to search for preference correlates in other traits One major thrust of early research was to attempt to explain strain differences in preference as a function of underlying differences in patterns of caloric utilization Reviews of these studies concluded that nutritional factors could not completely explain preference differences Rodgers 1966 McClearn 1968 *Alcoholism and Women, Genetics, and Fetal Development* William J.
