Quality of meat and fat in pigs as affected by genetics and nutrition Caspar Wenk, José A. Fernandez, Monique Dupuis, 2023-08-28 Pork is the most widely produced meat in the world To cover the demands of a fast growing population new scientific knowledge in genetics physiology and nutrition is generated which contributes in a general increase of production performance Production systems can be improved by constructing models which help to optimise use of the means of production and intensify production In some regions where production intensity is high concerns about environmental pollution are increasingly becoming a limiting factor Consumers and with them the retailer organisations are voicing serious concerns about the production systems and especially the use of feed additives In the context of the above the question of the quality of pork becomes a relevant issue A general view can only be obtained by taking all factors into consideration The diverse aspects of pork quality were covered in the session on Quality of Meat and Fat as Affected by Genetics and Nutrition at the 50th annual meeting of the EAAP in Zurich This publication presents the review presentations which give an overview from the different perspectives of meat quality and its use in human nutrition genetics physiology animal nutrition meat consumption and human health and consumer concerns In addition 38 short communications provide up to date knowledge on the subject of quality from a European perspective

Pig Genomics and Genetics Katarzyna Ropka

Molik,Katarzyna Piorkowska,2022-09-19 In this Special Issue we present the state of the art in the field of pig genetics and genomics including the identification of gene candidates linked to important pig traits and to nutritional modifications with the aim of collecting the most recent advances The published manuscripts focused on high throughput methodologies such as RNA sequencing ATAC seq MACE seq chip seq and RRBS and covered other fields of pig genetics The pig *Sus scrofa* is the most common large mammal in the world The *Sus* genus includes domestic pig and wild boar Since the draft reference genome sequence of *S. scrofa* was assembled in 2012 the processes of identification of genes related to important phenotypic traits and of search of genetic markers for pig selection have been significantly refined In addition the newest wide range high throughput techniques including microarrays next generation sequencing and the recent PacBio sequencing platform providing ultra long sequencing reads allow identifying gene mutations and gene candidates throughout the whole genome transcriptome or epigenome and estimating quantitative traits important for breeding as well as the genetic backgrounds of inherited diseases
