technologies to next generation rules and regulatory processes linked to challenges originating in a wide variety of new technological processes and applications Can lessons learned from past and current regulatory oversights of agricultural biotechnology and other high technology sectors help us address new and emerging regulatory challenges in the agri food genetics sector The expert contributors in this volume discuss the experiences of a wide range of North American European and Asian countries with high technology regulation to address four key questions related to the past and future development of agri food genomics regulation across the globe how unique is agri food biotechnology regulation and how can it be evaluated using the existing tools of regulatory analysis developed in examinations of other sectors is a government to governance model of regulatory regime development found in many other sectors relevant in this rapidly evolving sphere of activity is a stages model of regulatory regime development accurate And if so at which stage are we currently positioned in the regulation of agri food genomics products and technologies what drives movement between stages in different countries and sectors In assessing such drivers what are the key links between sectoral meso developments and more general macro and micro developments such as international relations and administrative behaviour By updating extending and challenging earlier empirical and theoretical social science perspectives on agricultural bio technological regulation this volume helps to inform future policy formulation It will be of interest to practitioners and students of biotechnology agriculture and science and technology policy and regulatory processes more generally

Medical Ethics, Prediction, and Prognosis Mariacarla

Gadebusch Bondio, Francesco Sporing, John-Stewart Gordon, 2017-04-21 Recent scientific developments in particular advances in pharmacogenetics and molecular genetics have given rise to numerous predictive procedures for detecting predispositions to diseases in patients This knowledge however does not necessarily promise benign results for either patients or health care professionals The aim of this volume is to analyse issues related to prediction and prognosis as a burgeoning field of medicine which is revolutionizing the way we understand and approach diagnosis and treatment Combining epistemic and ethical reflection with medical expertise on contemporary practice and research an interdisciplinary group of international experts critically examine anticipatory medicine from various perspectives including history of medicine bioethics theories of science and health economics The highly complex issues involved in medical prediction call for a far reaching debate on the value and scope of foreknowledge For example which responsibilities and burdens arise when still healthy people learn of their predisposition to diseases How should health care insurance reflect risky life styles Is the increasing medicalization of life connected with prevention ethically sustainable and financially possible in the developing world These and other related issues are the subject of this timely and important book which not only serves as an introduction to the area but also proposes many feasible solutions to the problems outlined
