Geographic Information Systems In Ecology:

Geographic Information Systems in Ecology Carol A Johnston, 1998-02-11 Geographical information systems are one of the most revolutionary and important tools that have become available to ecological researchers in recent years. Many ecologists are unaware, however, of the full power of GIS techniques and are not using them to their full advantage. By providing examples of ecological applications at scales ranging from organisms to landscapes, this new book offers basic information on the variety of analyses available using GIS. Also discussed is the full scope for linkage to related technologies like remote sensing and methods like spatially explicit modelling. Researchers will find this an invaluable guide to applying and getting the most out of GIS techniques. Presumes no previous GIS experience. A practical guide to using GIS in ecological research. Uses numerous and varied experimental examples and data.

GIS for Ecology Richard Wadsworth, Jo Treweek, 1999 A straight forward introduction to the fundamental principles of GIS, this text focuses on data acquisition, handling and analysis. It contains checklists and bullet points and draws on the experiences of ecologists who have learned how to use GIS.

Spatial Uncertainty for Ecology, 2001-06-29 This is one of the first books to take an ecological perspective on uncertainty in spatial data. It applies principles and techniques from geography and other disciplines to ecological research and thus delivers the tools of cartography, cognition, spatial statistics, remote sensing and computer sciences by way of spatial data. After describing the uses of such data in ecological research, the authors discuss how to account for the effects of uncertainty in various methods of analysis.

Landscape Ecology And Geographical Information Systems R Haines-Young, David R. Green, S. H. Cousins, 2003-09-02 The landscape we see and live in is an important part of our everyday lives, be they urban or rural. Environmental concern has grown in recent years as a result of public awareness of the detrimental impact industry, transport and tourism can have on the ecosystem. This book examines the role of the new technologies of geographical information systems and remote sensing as media for the study of landscape as they provide tools of unprecedented power which collect, store, manipulate and analyze data so as to support and assist the decisions which the environmental scientist, ecologist, zoologist and botanist make. Landscape Ecology and Geographical Information Systems is international in scope, provides an overview of operational applications and offers experiences in the form of case studies of applications to vegetation, animals and hydrology. The book is organized into four sections. It provides an overview of the uses of GIS and RSS in landscape ecology, debates conceptual issues such as applications, throw up, considers analytical techniques and technical issues and offers experiences in the form of Case Studies On Plant, Abiotic And Animal Landscape Ecology.
