Geography Fact Oceans:

Earth's Oceans Peter Castellano, 2016-07-15 Many people know that about 70 percent of Earth's surface is covered by water. But they may not know that the oceans hold nearly 97 percent of the water on Earth. From the Arctic to the Pacific, these huge bodies of water are important to the health of our planet. Readers learn the different boundaries and characteristics of each of Earth's oceans, complemented by full-color photographs both above and below the surface. The main content and fun fact boxes include both the water cycle and geographic information and emphasize other science and social studies curriculum topics such as conservation.

The Geography of the Ocean Anne-Flore Laloë, 2016-04-14 Despite the fact that the vast majority of the earth's surface is made up of oceans, there has been surprisingly little work by geographers which critically examines the ocean space and our knowledge and perceptions of it. This book employs a broad conceptual and methodological framework to analyse specific events that have contributed to the production of geographical knowledge about the ocean. These include but are not limited to Christopher Columbus' first transatlantic journey, the mapping of nonexistent islands, the establishment of transoceanic trade routes, the discovery of large-scale water movements, the HMS Challenger expedition, the search for the elusive Terra Australis Incognita, the formulation of the theory of continental drift, and the mapping of the seabed. Using a combination of original empirical archival material and cartographic and theoretical sources, this book uniquely brings together fascinating narratives throughout history to produce a representation and mapping of geographical oceanic knowledge. It questions how we know what we know about the oceans and how this knowledge is represented and mapped. The book then uses this representation and mapping as a way to coherently trace the evolution of oceanic spatial awareness. In recent years, particularly in historical geography, discovering and knowing the ocean space has been a completely separate enterprise from discovering and colonising the lands beyond it. There has been such focus on studying colonised lands yet the oceans between them have been neglected. This book gives the geographical ocean a voice to be acknowledged as a space where history, geography, and indeed historical geography took place.

Rivers and Oceans Barbara Taylor, 1993-01-01 Introduces the different forms of water in our world: the water cycle, stages in the life of a river, ocean currents, waves, and tides, lakes, and water pollution.

Ocean Myths and Facts Raina Mooncrest, 2025-03-04 *Ocean Myths and Facts* explores the fascinating intersection of cultural sea lore and scientific oceanography, examining how age-old beliefs about the marine environment compare to verifiable data. The book navigates the murky waters between captivating legends and concrete facts, highlighting the importance of distinguishing between the two for effective ocean conservation and scientific literacy. It is intriguing to note how early understandings of the seas, shaped by limited observational capabilities, led to stories of monstrous creatures and supernatural phenomena shaping our cultural beliefs and relationship with the ocean. The book progresses from introducing core concepts in oceanography and marine biology to delving into specific ocean myths, comparing cultural origins against current scientific knowledge. A key

focus involves debunking myths related to marine life and ocean geography such as exaggerated claims about the size and danger of certain species or the existence of bottomless trenches It uniquely adopts a dual approach systematically deconstructing myths while respecting their cultural significance enriching the scientific analysis and fostering a more holistic understanding By connecting Earth Sciences Geography and Nature studies with history and anthropology Ocean Myths and Facts offers a valuable perspective for students educators and anyone curious about the world's oceans
