Die GML Spezifikation gibt durch abstrakte Elemente und Typen den Modellierungsrahmen vor. In diesem ist bereits eine große Auswahl direkt verwendbarer Geometrie und Topologieelemente enthalten. Das konkrete Austauschformat ergibt sich erst durch Definition anwendungsspezifischer Typen und Elemente. Die GML Spezifikation zeichnet sich durch eine hohe Flexibilität als auch eine hohe Komplexität bei der Beschreibung aus.      Geographic Information, 2009      **Geographic Information** Standards Australia (Organization), 2008      **Geographic Information** South African Bureau of Standards, 2018      **Geographic Information. The Geography Mark Up Language GML was developed as the standard language and is emerging as the foundation for Internet GIS. Geography Mark Up Language Foundation for the Geo Web provides a broad coverage of the use of GML in different application areas along with the technical means for building these applications. Starting from the basic concepts this book works through all the important topics in both GML 2.0 and GML 3.0 with illustrations and worked examples to demonstrate its use. Organized into two sections Volume I introduces readers to the new world of GML and explains how it can be used across a broad range of GIS projects. It deals with the basic concepts of XML and GML and enables readers to make decisions on the utility of GML in their projects and software acquisitions. Volume II is intended for the technical reader and answers questions on the meaning and structure of GML schema components, the development of GML application schemas and the use of GML in connection with web services, legacy GIS and relational databases. Contains worked examples. Covers all aspects of GML 3.0 from geometry and topology to units of measure, default styling and coverages. Explains the Geo Web and its impact on vertical applications.
