Geometric Aspects Of Functional Analysis Israel Seminar:

   Geometric Aspects of Functional Analysis Vitalij D. Milman,2000   **Geometric Aspects of Functional Analysis** Bo'az Klartag,Emanuel Milman,2020-06-20 Continuing the theme of the previous volumes these seminar notes reflect general trends in the study of Geometric Aspects of Functional Analysis understood in a broad sense Two classical topics represented are the Concentration of Measure Phenomenon in the Local Theory of Banach Spaces which has recently had triumphs in Random Matrix Theory and the Central Limit Theorem one of the earliest examples of regularity and order in high dimensions Central to the text is the study of the Poincar and log Sobolev functional inequalities their reverses and other inequalities in which a crucial role is often played by convexity assumptions such as Log Concavity The concept and properties of Entropy form an important subject with Bourgain s slicing problem and its variants drawing much attention Constructions related to Convexity Theory are proposed and revisited as well as inequalities that go beyond the Brunn Minkowski theory One of the major current research directions addressed is the identification of lower dimensional structures with remarkable properties in rather arbitrary high dimensional objects In addition to functional analytic results connections to Computer Science and to Differential Geometry are also discussed   Geometric Aspects of Functional Analysis Vitali D. Milman,Gideon Schechtman,2004   **Geometric Aspects of Functional Analysis** V.D. Milman,G. Schechtman,2007-05-09 This volume of original research papers from the Israeli GAFA seminar during the years 1996 2000 not only reports on more traditional directions of Geometric Functional Analysis but also reflects on some of the recent new trends in Banach Space Theory and related topics These include the tighter connection with convexity and the resulting added emphasis on convex bodies that are not necessarily centrally symmetric and the treatment of bodies which have only very weak convex like structure Another topic represented here is the use of new probabilistic tools in particular transportation of measure methods and new inequalities emerging from Poincar like inequalities   **Geometric Aspects of Functional Analysis** Bo'az Klartag,Emanuel Milman,2020-07-08 Continuing the theme of the previous volumes these seminar notes reflect general trends in the study of Geometric Aspects of Functional Analysis understood in a broad sense Two classical topics represented are the Concentration of Measure Phenomenon in the Local Theory of Banach Spaces which has recently had triumphs in Random Matrix Theory and the Central Limit Theorem one of the earliest examples of regularity and order in high dimensions Central to the text is the study of the Poincar and log Sobolev functional inequalities their reverses and other inequalities in which a crucial role is often played by convexity assumptions such as Log Concavity The concept and properties of Entropy form an important subject with Bourgain s slicing problem and its variants drawing much attention Constructions related to Convexity Theory are proposed and revisited as well as inequalities that go beyond the Brunn Minkowski theory One of the major current research directions addressed is the identification of lower dimensional structures with remarkable properties in rather arbitrary high dimensional objects In addition to functional analytic results

connections to Computer Science and to Differential Geometry are also discussed   Geometric Aspects of Functional Analysis Vitali D. Milman,Gideon Schechtman,2004   **Geometric Aspects of Functional Analysis** Bo'az Klartag,Emanuel Milman,2014-10-08 As in the previous Seminar Notes the current volume reflects general trends in the study of Geometric Aspects of Functional Analysis Most of the papers deal with different aspects of Asymptotic Geometric Analysis understood in a broad sense many continue the study of geometric and volumetric properties of convex bodies and log concave measures in high dimensions and in particular the mean norm mean width metric entropy spectral gap thin shell and slicing parameters with applications to Dvoretzky and Central Limit type results The study of spectral properties of various systems matrices operators and potentials is another central theme in this volume As expected probabilistic tools play a significant role and probabilistic questions regarding Gaussian noise stability the Gaussian Free Field and First Passage Percolation are also addressed The historical connection to the field of Classical Convexity is also well represented with new properties and applications of mixed volumes The interplay between the real convex and complex pluri subharmonic settings continues to manifest itself in several additional articles All contributions are original research papers and were subject to the usual refereeing standards   **Geometric Aspects of Functional Analysis** Joram Lindenstrauss,Vitali Milman,2012-12-06 This is the sixth published volume of the Israel Seminar on Geometric Aspects of Functional Analysis The previous volumes are 1983 84 published privately by Tel Aviv University 1985 86 Springer Lecture Notes Vol 1267 1986 87 Springer Lecture Notes Vol 1317 1987 88 Springer Lecture Notes Vol 1376 1989 90 Springer Lecture Notes Vol 1469 As in the previous vC lumes the central subject of this volume is Banach space theory in its various aspects In view of the spectacular development in infinite dimensional Banach space theory in recent years like the solution of the hyperplane problem the unconditional basic sequence problem and the distortion problem in Hilbert space it is quite natural that the present volume contains substantially more contributions in this direction than the previous volumes This volume also contains many important contributions in the traditional directions of this seminar such as probabilistic methods in functional analysis non linear theory harmonic analysis and especially the local theory of Banach spaces and its connection to classical convexity theory in IRn The papers in this volume are original research papers and include an invited survey by Alexander Olevskii of Kolmogorov s work on Fourier analysis which was presented at a special meeting on the occasion of the 90th birthday of A N Kol mogorov We are very grateful to Mrs M Hercberg for her generous help in many directions which made the publication of this volume possible Joram Lindenstrauss Vitali Milman 1992 1994 Operator Theory Advances and Applications Vol

Geometric Aspects of Functional Analysis Joram Lindenstrauss,Vitali D. Milman,2006-11-14 This is the third published volume of the proceedings of the Israel Seminar on Geometric Aspects of Functional Analysis The large majority of the papers in this volume are original research papers There was last year a strong emphasis on classical finite dimensional convexity theory and its connection with Banach space theory In recent years it has become evident that the notions and

results of the local theory of Banach spaces are useful in solving classical questions in convexity theory The present volume contributes to clarifying this point In addition this volume contains basic contributions to ergodic theory invariant subspace theory and qualitative differential geometry **Geometric Aspects of Functional Analysis** Vitali D. Milman,Gideon Schechtman,2007-04-27 This collection of original papers related to the Israeli GAFA seminar on Geometric Aspects of Functional Analysis during the years 2004 2005 reflects the general trends of the theory and are a source of inspiration for research Most of the papers deal with different aspects of the Asymptotic Geometric Analysis ranging from classical topics in the geometry of convex bodies to the study of sections or projections of convex bodies **Geometric Aspects of Functional Analysis** ISRAEL SEMINAR ON GEOMETRICAL ASPECTS OF, Geometric Aspects of Functional Analysis Bo'az Klartag,Shahar Mendelson,Vitali D. Milman,2012-07-25 This collection of original papers related to the Israeli GAFA seminar on Geometric Aspects of Functional Analysis from the years 2006 to 2011 continues the long tradition of the previous volumes which reflect the general trends of Asymptotic Geometric Analysis understood in a broad sense and are a source of inspiration for new research Most of the papers deal with various aspects of the theory including classical topics in the geometry of convex bodies inequalities involving volumes of such bodies or more generally logarithmically concave measures valuation theory probabilistic and isoperimetric problems in the combinatorial setting volume distribution on high dimensional spaces and characterization of classical constructions in Geometry and Analysis like the Legendre and Fourier transforms derivation and others All the papers here are original research papers **Geometric Aspects of Functional Analysis** ,2003 *Geometric Aspects of Functional Analysis* ,1989 *Geometric Aspects of Functional Analysis* Bo'az Klartag,Emanuel Milman,2017-04-17 As in the previous Seminar Notes the current volume reflects general trends in the study of Geometric Aspects of Functional Analysis understood in a broad sense A classical theme in the Local Theory of Banach Spaces which is well represented in this volume is the identification of lower dimensional structures in high dimensional objects More recent applications of high dimensionality are manifested by contributions in Random Matrix Theory Concentration of Measure and Empirical Processes Naturally the Gaussian measure plays a central role in many of these topics and is also studied in this volume in particular the recent breakthrough proof of the Gaussian Correlation Conjecture is revisited The interplay of the theory with Harmonic and Spectral Analysis is also well apparent in several contributions The classical relation to both the primal and dual Brunn Minkowski theories is also well represented and related algebraic structures pertaining to valuations and valent functions are discussed All contributions are original research papers and were subject to the usual refereeing standards Geometric Aspects of Functional Analysis ,1988 **Geometric Aspects of Functional Analysis** Joram Lindenstrauss,Vitali D. Milman,2006-11-14 The scope of the Israel seminar in geometric aspects of functional analysis during the academic year 89 90 was particularly wide covering topics as diverse as Dynamical systems Quantum chaos Convex sets in Rn Harmonic analysis and Banach space theory The large

majority of the papers are original research papers **Geometric Aspects of Functional Analysis** Joram Lindenstrauss,Vitali D. Milman,2006-11-14 **Geometric Aspects of Functional Analysis** Bo'az Klartag,Emanuel Milman,2020 Continuing the theme of the previous volume these seminar notes reflect general trends in the study of Geometric Aspects of Functional Analysis understood in a broad sense Two classical topics represented are the Concentration of Measure Phenomenon in the Local Theory of Banach Spaces which has recently had triumphs in Random Matrix Theory and the Central Limit Theorem one of the earliest examples of regularity and order in high dimension Central to the text is the study of the Poincar and log Sobolev functional inequalities their reverses and other inequalities in which a crucial role is often played by convexity assumptions such as Log Concavity The concept and properties of Entropy form an important subject with Bourgain s slicing problem and its variants drawing much attention Constructions related to Convexity Theory are proposed and revisited as well as inequalities that go beyond the Brunn Minkowski theory One of the major current research directions addressed is the identification of lower dimensional structures with remarkable properties in rather arbitrary high dimensional objects In addition to functional analytic results connections to Computer Science and to Differential Geometry are also discussed **Geometric Aspects of Functional Analysis** Ronen Eldan,Bo'az Klartag,Alexander Litvak,Emanuel Milman,2023-09-29 This book reflects general trends in the study of geometric aspects of functional analysis understood in a broad sense A classical theme in the local theory of Banach spaces is the study of probability measures in high dimension and the concentration of measure phenomenon Here this phenomenon is approached from different angles including through analysis on the Hamming cube and via quantitative estimates in the Central Limit Theorem under thin shell and related assumptions Classical convexity theory plays a central role in this volume as well as the study of geometric inequalities These inequalities which are somewhat in spirit of the Brunn Minkowski inequality in turn shed light on convexity and on the geometry of Euclidean space Probability measures with convexity or curvature properties such as log concave distributions occupy an equally central role and arise in the study of Gaussian measures and non trivial properties of the heat flow in Euclidean spaces Also discussed are interactions of this circle of ideas with linear programming and sampling algorithms including the solution of a question in online learning algorithms using a classical convexity construction from the 19th century
