Spectral Geometry of Partial Differential Operators

Michael Ruzhansky, Makhmud Sadybekov, Durvudkhan Suragan, 2020-02-07 The aim of Spectral Geometry of Partial Differential Operators is to provide a basic and self contained introduction to the ideas underpinning spectral geometric inequalities arising in the theory of partial differential equations Historically one of the first inequalities of the spectral geometry was the minimization problem of the first eigenvalue of the Dirichlet Laplacian Nowadays this type of inequalities of spectral geometry have expanded to many other cases with number of applications in physics and other sciences The main reason why the results are useful beyond the intrinsic interest of geometric extremum problems is that they produce a priori bounds for spectral invariants of partial differential operators on arbitrary domains Features Collects the ideas underpinning the inequalities of the spectral geometry in both self adjoint and non self adjoint operator theory in a way accessible by anyone with a basic level of understanding of linear differential operators Aimed at theoretical as well as applied mathematicians from a wide range of scientific fields including acoustics astronomy MEMS and other physical sciences Provides a step by step guide to the techniques of non self adjoint partial differential operators and for the applications of such methods Provides a self contained coverage of the traditional and modern theories of linear partial differential operators and does not require a previous

background in operator theory
