Geometry Of Curves And Surfaces With Maple:

Geometry of Curves and Surfaces with MAPLE Vladimir Rovenski, 2013-12-01 This concise text on geometry with computer modeling presents some elementary methods for analytical modeling and visualization of curves and surfaces. The author systematically examines such powerful tools as 2 D and 3 D animation of geometric images, transformations, shadows, and colors, and then further studies more complex problems in differential geometry. Well illustrated with more than 350 figures reproducible using Maple programs, in the book the work is devoted to three main areas: curves, surfaces, and polyhedra. Pedagogical benefits can be found in the large number of Maple programs, some of which are analogous to C programs including those for splines and fractals. To avoid tedious typing, readers will be able to download many of the programs from the Birkhauser web site. Aimed at a broad audience of students, instructors of mathematics, computer scientists, and engineers who have knowledge of analytical geometry, i.e. method of coordinates, this text will be an excellent classroom resource or self study reference. With over 100 stimulating exercises, problems, and solutions, it *Geometry of Curves and Surfaces with Maple* will integrate traditional differential and non Euclidean geometries with more current computer algebra systems in a practical and user friendly format.

Modeling of Curves and Surfaces with MATLAB® Vladimir Rovenski, 2010-06-10 This text on geometry is devoted to various central geometrical topics including graphs of functions, transformations, non Euclidean geometries, curves and surfaces, as well as their applications in a variety of disciplines. This book presents elementary methods for analytical modeling and demonstrates the potential for symbolic computational tools to support the development of analytical solutions. The author systematically examines several powerful tools of MATLAB including 2D and 3D animation of geometric images with shadows and colors, and transformations using matrices. With over 150 stimulating exercises and problems, this text integrates traditional differential and non Euclidean geometries with more current computer systems in a practical and user friendly format. This text is an excellent classroom resource or self study reference for undergraduate students in a variety of disciplines.

Differential Geometry of Curves and Surfaces Thomas F. Banchoff, Stephen Lovett, 2022-08-05 Through two previous editions, the third edition of this popular and intriguing text takes both an analytical/theoretical approach and a visual/intuitive approach to the local and global properties of curves and surfaces. Requiring only multivariable calculus and linear algebra, it develops students' geometric intuition through interactive graphics applets. Applets are presented in Maple workbook format which readers can access using the free Maple Player. The book explains the reasons for various definitions, while the interactive applets offer motivation for definitions, allowing students to explore examples further and give a visual explanation of complicated theorems. The ability to change parametric curves and parametrized surfaces in an applet lets students probe the concepts far beyond what static text permits. Investigative project ideas promote student research. At users' request, this third edition offers a broader list of exercises. More elementary exercises are added, and some challenging problems are moved later in the exercise

sets to assure more graduated progress The authors also add hints to motivate students grappling with the more difficult exercises This student friendly and readable approach offers additional examples well placed to assist student comprehension In the presentation of the Gauss Bonnet Theorem the authors provide more intuition and stepping stones to help students grasp phenomena behind it Also the concept of a homeomorphism is new to students even though it is a key theoretical component of the definition of a regular surface Providing more examples show students how to prove certain functions are homeomorphisms

Differential Geometry and Its Applications John Oprea, 2007-09-06 This book studies the differential geometry of surfaces and its relevance to engineering and the sciences

An Introduction to Modern Mathematical Computing Jonathan M. Borwein, Matthew P. Skerritt, 2011-07-15 Thirty years ago mathematical as opposed to applied numerical computation was difficult to perform and so relatively little used Three threads changed that the emergence of the personal computer the discovery of fiber optics and the consequent development of the modern internet and the building of the Three M s Maple Mathematica and Matlab We intend to persuade that Maple and other like tools are worth knowing assuming only that one wishes to be a mathematician a mathematics educator a computer scientist an engineer or scientist or anyone else who wishes needs to use mathematics better We also hope to explain how to become an experimental mathematician while learning to be better at proving things To accomplish this our material is divided into three main chapters followed by a postscript These cover elementary number theory calculus of one and several variables introductory linear algebra and visualization and interactive geometric computation

Twentieth Anniversary Volume: Discrete & Computational Geometry Jacob E. Goodman, János Pach, Richard Pollack, 2009-03-02 While we were busy putting together the present collection of articles celebrating the twentieth birthday of our journal Discrete the complexity hardness of a variety of geometric algorithms depends on McMullen's upper bound theorem on convex polytopes or on the maximum number of halving lines determined by $2n$ points in the plane that is the number of different ways a set of points can be cut by a straight line into two parts of the same size proximity questions stemming from several application areas turn out to be intimately related to Erdős's classical questions on the distribution of distances determined by n points in the plane or in space On the other hand the algorithmic point of view has fertilized several fields of convexity and of discrete geometry which had lain fallow for some years and has opened new research directions

bases triangulations of point sets and the mutual relationship This diversity is accompanied by the abundance of available software systems which often handle only special mathematical aspects Therefore the volume s other focus is on solutions towards the integration of mathematical software systems This includes low level and XML based high level communication channels as well as general framework for modular systems Subject Guide to Books in Print ,1997
