*Econometric Business Cycle Research* Jan Jacobs, 2012-12-06 Econometric Business Cycle Research deals with econometric business cycle research EBCR a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle theories EBCR combines economic theory and measurement in the study of business cycles i.e. ups and downs in overall economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly detailed assessment of the methods and is not overturned in the empirical illustrations The main conclusion does not imply the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling business cycles on an observation per observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable

Research Jan Tinbergen, 2013-10 This is a new release of the original 1940 edition **Econometric Business Cycle**

**Research** J. P. A. M. Jacobs, 1998 **The Business Cycle: Theories and Evidence** M.T. Belongia, Michelle R.

Garfinkel, 2012-12-06 These proceedings from a conference held at the Federal Reserve Bank of St Louis on October 17 18

1991 attempted to layout what we currently know about aggregate economic fluctuations Identifying what we know inevitably reveals what we do not know about such fluctuations as well From the vantage point of where the conference s participants view our current understanding to be these proceedings can be seen as suggesting an agenda for further research The conference was divided into five sections It began with the formulation of an empirical definition of the business cycle and a recitation of the stylized facts that must be explained by any theory that purports to capture the business cycle s essence After outlining the historical development and key features of the current theories of business cycles the conference evaluated these theories on the basis of their ability to explain the facts Included in this evaluation was a discussion of whether and how the competing theories could be distinguished empirically The conference then examined the implications for policy of what is known and not known about business cycles A panel discussion closed the conference highlighting important unresolved theoretical and empirical issues that should be taken up in future business cycle research What Is a Business Cycle Before gaining a genuine understanding of business cycles economists must agree and be clear about what they mean when they refer to the cycle **Advances in Business Cycle Research** Pierre-Yves

Henin, 2012-12-06 Models derived from the Real Business Cycle perspective have recently taken a major place in business cycle research The papers in this present volume bring three contributions to this research programme A critical evaluation of the canonical RBC models new elements of empirical relevance based on comparative calibration and testing and new specifications at the frontier of business cycle research coping with non walrasian features contracts and nominal rigidities unemployment and growth **The Business Cycle in the Post-War World** A D Knox, 2017-01-10 **The History of**

**Econometric Ideas** Mary S. Morgan, 1990 This book illustrates how economists first learnt to harness statistical methods to measure and test the laws of economics **Into Survey Data in Business Cycle and Monetary Policy Analysis** Jan-Egbert

Sturm, Timo Wollmershäuser, 2006-03-30 A pilot flying to a distant city needs to check his position right path and weather conditions and must constantly keep his plane under control to land safely

The Ifo survey data provide advance information on changing economic weather conditions and help keep the economy under control. To be sure by their very nature they only provide short term information. But like a plane the economy will not be able to reach its long term goals if it strays off course in the short term. The Ifo survey data provide the most comprehensive and accurate to date database in Europe on the state of the business cycle and the Ifo climate indicator sometimes simply called The Ifo is the most frequently cited indicator of its kind in Europe. Both the European stock market and the euro react to our indicator. Ifo's methodology for determining the business climate indicator has been exported to more than fifty countries, most recently to Turkey and China. The Ifo people were proud to have been asked to help set up polling systems in these countries. It is said that the Chinese government relies more on their Ifo indicator than on their official accounting statistics.

**A History of Econometrics** Duo Qin, 2013-07-25 Reformation of Econometrics is a sequel to *The Formation of Econometrics: A Historical Perspective* 1993 OUP which traces the formation of econometric theory during the period 1930-1960. This book provides an account of the advances in the field of econometrics since the 1970s. Based on original research it focuses on the reformists' movement and schools of thought and practices that attempted a paradigm shift in econometrics in the 1970s and 1980s. It describes the formation and consolidation of the Cowles Commission (CC) paradigm and traces and analyses the three major methodological attempts to resolve problems involved in model choice and specification of the CC paradigm. These attempts have reoriented the focus of econometric research from internal questions (how to optimally estimate a priori given structural parameters) to external questions (how to choose design and specify models). It also examines various modelling issues and problems through two case studies: modelling the Phillips curve and business cycles. The third part of the book delves into the development of three key aspects of model specification in detail: structural parameters, error terms, and model selection and design procedures. The final chapter uses citation analyses to study the impact of the CC paradigm over the span of three and half decades (1970-2005). The citation statistics show that the impact has remained extensive and relatively strong in spite of certain weakening signs. It implies that the reformative attempts have fallen short of causing a paradigm shift.

**Crises and Cycles in Economic Dictionaries and Encyclopaedias** Daniele Besomi, 2013-03-01 This book aims at investigating from the perspective of the major economic dictionaries the notions of economic crisis and cycle. The project consists in giving an extensive summary of a number of significant entries on this subject with an introductory essay to each entry placing them in the dictionary to which they belong in their context, giving some details on the author of the dictionary entry and assessing the entry's and its author's contribution. The broad picture including the history of these encyclopedic tools will be examined in the introductory essays.
