Econometrics And Structural Change:

Econometrics of Structural Change Walter Krämer, 2012-12-06 Econometric models are made up of assumptions which never exactly match reality. Among the most contested ones is the requirement that the coefficients of an econometric model remain stable over time. Recent years have therefore seen numerous attempts to test for it or to model possible structural change when it can no longer be ignored. This collection of papers from Empirical Economics mirrors part of this development. The point of departure of most studies in this volume is the standard linear regression model $Y_t = \alpha + \beta_1 x_t + \beta_2 f_{1t} + \beta_3 f_{2t} + \dots + \beta_k f_{kt} + u_t$, where notation is obvious and where the index t emphasises the fact that structural change is mostly discussed and encountered in a time series context. It is much less of a problem for cross section data although many tests apply there as well. The null hypothesis of most tests for structural change is that $f_{1t} = f_{10}$ for all t ; i.e., that the same regression applies to all time periods in the sample and that the disturbances u_t are well behaved. The well known Chow test for instance assumes that there is a single structural shift at a known point in time; i.e., that $f_{1t} = f_{10}$ for $t < T_0$ and $f_{1t} = f_{11}$ for $t \geq T_0$.

Econometrics and Structural Change Lyle D. Broemeling, 1986-10-29 **Economic Structural Change** Peter Hackl, Anders H. Westlund, 2013-06-29 Structural change is a fundamental concept in economic model building. Statistics and econometrics provide the tools for identification of change for estimating the onset of a change for assessing its extent and relevance. Statistics and econometrics also have developed models that are suitable for picturing the data generating process in the presence of structural change by assimilating the changes or due to the robustness to its presence. Important subjects in this context are forecasting methods. The need for such methods became obvious when as a consequence of the oil price shock the results of empirical analyses suddenly seemed to be much less reliable than before. Nowadays economists agree that models with fixed structure that picture reality over longer periods are illusions. An example for less dramatic causes than the oil price shock with similarly profound effects is economic growth and its impacts on the economic system. Indeed economic growth was a motivating concept for this volume. In 1983 the International Institute for Applied Systems Analysis (IIASA) in Laxenburg Austria initiated an ambitious project on Economic Growth and Structural Change.

econometric procedures and or propose others Specific topics include identification in nonlinear models inference with weak instruments tests for nonstationary in time series and panel data generalized empirical likelihood estimation and the bootstrap

The Econometrics of Macroeconomic Modelling Gunnar Bårdsen, Øyvind Eitrheim, Eilev S. Jansen, 2005 This work describes how the discipline has adapted to changing demands by adopting new insights from economic theory and by taking advantage of the methodological and conceptual advances within time series econometrics

Causal Inference in Econometrics Van-Nam Huynh, Vladik Kreinovich, Songsak Sriboonchitta, 2015-12-28 This book is devoted to the analysis of causal inference which is one of the most difficult tasks in data analysis when two phenomena are observed to be related it is often difficult to decide whether one of them causally influences the other one or whether these two phenomena have a common cause This analysis is the main focus of this volume To get a good understanding of the causal inference it is important to have models of economic phenomena which are as accurate as possible Because of this need this volume also contains papers that use non traditional economic models such as fuzzy models and models obtained by using neural networks and data mining techniques It also contains papers that apply different econometric models to analyze real life economic dependencies
