Environmental Conservation Clement Allan Tisdell, 2005-01-01 Tisdell has produced one of the best books in print about the economics of environmental conservation This volume updates the 1991 edition by discussing more current issues theories developments and analytic frameworks Tisdell masterfully weaves into many chapters insights from ecological economics a somewhat new area of economics that cannot be ignored in informed discussions of environmental conservation Tisdell writes clearly and documents each chapter extremely well He presents a quite balanced view on policy issues discussing pros and cons of different policies Overall an extraordinary book Essential Academic collections upper division undergraduate and up D D Miller Choice I like it alot and would certainly recommend it to students as an excellent entry point into environmental economics It is certainly comprehensive covering international through to local environmental issues developed and developing country experiences across both green and brown topics The book is written in a highly accessible style and embodies a rigorous theoretical base on which is developed a host of practical examples of application This reflects Tisdell s wide ranging experience as one of the senior statesmen of environmental economics Jeff Bennett The Australian National University A second edition of this book is to be warmly welcomed The insights it offers into the sustainable use of ecological resources especially in developing countries are important for those coming to the study of environmental resource or ecological economics for the first time While the treatment of new topics such as globalization and the Environmental Kuznets Curve adds value to the original text the inclusion of much material from the first edition helps remind us that there is a rich and long standing literature on this topic Charles Perrings University of York UK In the second edition of Economics of Environmental Conservation Clem Tisdell applies wisdom experience and carefully developed economic theory to dozens of conservation issues The result is a wide ranging book that skillfully employs ecological economics to analyse conservation issues drawn often from Australia and Asia and relevant in many countries The policy options proposed to the diverse conservation issues reflect a philosophy developed during more than thirty years research The book is a rich source of insight and inspiration for anyone analysing environmental conservation issues Ross Cullen Lincoln University New Zealand Few economists have the breadth of experience and depth of analytical capability to comment with insight on the vast array of issues that now comprise the environmental agenda Clem Tisdell is one of that

small band Here is a welcome expansion of his already successful *Economics of Environmental Conservation* Highly recommended David Pearce University College London UK This fully updated and comprehensively revised edition of a classic text concentrates on the economics of conserving the living environment It begins by covering the ethical foundations and basic economic paradigms essential for understanding and assessing ecological economics General strategies for global environmental conservation policies for government intervention developing countries preserving wildlife and biodiversity open access to and common property in natural resources conservation of natural areas forestry agriculture and the environment tourism sustainable development and demographic change are also all covered This second edition deals with contemporary environmental policy issues that can be expected to be of lasting concern and importance each chapter benefiting from either the addition of substantial sections of new material valuable explanations or updates and revisions in light of developments in theory or world events and conditions Updated techniques of economic analysis are also introduced explained simply and a

Tradeoffs Or Synergies? David R. Lee, Christopher B. Barrett, 2000-11-22 The need to increase food production enhance economic growth and reduce poverty in an environmentally sustainable context is an issue of growing importance This book addresses the linkages and tradeoffs involved in solving such key challenges [Guide to Sustainable Development and Environmental Policy](#) William L Ascher, Natalia Mirovitskaya, 2002-03-29 A compilation of definitions terms and critical commentary on aspects of sustainable development and environmental policy with a strong emphasis on policy tools policy practices and systems of international environmental governance *Biodiversity Economics* Andreas Kontoleon, Unai Pascual, Timothy Swanson, 2007-12-13 Human induced biodiversity loss is greater now than at any time in human history with extinctions occurring at rates hundreds of times higher than background extinction levels The field of biodiversity economics analyses the socio economic causes of and solutions to biodiversity loss by combining the disciplines of economics ecology and biology This field has shown a remarkable degree of transformation over the past four decades and now incorporates the analysis of the entire diversity of biological resources within the living world *Biodiversity Economics* presents a series of papers that show how bio economic analysis can be applied to the examination and evaluation of the problem of various forms of biodiversity loss Containing insightful bio economic research by some of prominent practitioners in the field this volume will be an essential research tool to those working on biodiversity issues in the academic policy and private sectors

The Environment and Development in Africa Moses K. Tesi, 2000-01-01 The premise of *The Environment and Development in Africa* is that current environmental problems in sub Saharan Africa are an outcome of the continent s development activities Whether these activities have generated economic growth and raised living standards or have led to growth without overall increases in living standards or have even contributed to a decline in people s well being developments in that region have produced effects that have degraded Africa s environment in many ways This book presents a comprehensive and systematic analysis of the context of the environmental issues facing sub Saharan African states

Contributors discuss the problems associated with generating the capacity to manage Africa's environmental concerns, assess the impact of economic development efforts on the region's environment, and examine various societal and policy responses to environmental problems and to development problems linked to ecological decay. This is an important book for scholars and policy advisors concerned with African studies and global environmental issues. **The Virtues of Ignorance** Bill

Vitek, Wes Jackson, 2008-05-01 Human dependence on technology has increased exponentially over the past several centuries, and so too has the notion that we can fix environmental problems with scientific applications. *The Virtues of Ignorance: Complexity, Sustainability, and the Limits of Knowledge* proposes an alternative to this hubristic, shortsighted, and dangerous worldview. The contributors argue that uncritical faith in scientific knowledge has created many of the problems now threatening the planet, and that our wholesale reliance on scientific progress is both untenable and myopic. Bill Vitek, Wes Jackson, and a diverse group of thinkers including Wendell Berry, Anna Peterson, and Robert Root-Bernstein offer profound arguments for the advantages of an ignorance-based worldview. Their essays explore this philosophy from numerous perspectives, including its origins, its essence, and how its implementation can preserve vital natural resources for posterity. All conclude that we must simply accept the proposition that our ignorance far exceeds our knowledge, and always will. Rejecting the belief that science and technology are benignly at the service of society, the authors argue that recognizing ignorance might be the only path to reliable knowledge. They also uncover an interesting paradox: knowledge and insight accumulate fastest in the minds of those who hold an ignorance-based worldview. For, by examining the alternatives to a technology-based culture, they expand their imaginations. Demonstrating that knowledge-based worldviews are more dangerous than useful, *The Virtues of Ignorance* looks closely at the relationship between the land and the future generations who will depend on it. The authors argue that we can never improve upon nature, but that we can by putting this new perspective to work in our professional and personal lives, live sustainably on Earth. *Evaluation and Assessment for Conservation* Ian

Spellerberg, 2013-11-11 Most politicians have jumped on the conservation bandwagon, and nobody running for public office these days can afford to take an overtly anti-environment stand. The fascination that children have for nature, the generous donations people make to conservation organizations, the votes cast for Green Parties, the continuing popularity of zoos and wildlife films, and the strong sales of books about the environment all provide evidence to politicians that the general public supports the idea of conservation. Conservation has become a major issue for governments. No longer is it necessary for conservationists to campaign for getting the cause on the agenda; it is already there at least as a talking point. The issue now is how to convert this generalized interest into real action. And among the many priorities competing for attention, how is a government or a private organization to decide what to do first? From a very limited budget, budgets will always be limited. What is the package of activities that is most likely to lead to the results that the public wants? Ian Spellerberg attempts to address these questions, which are at the heart of modern conservation action. It is relatively easy to prescribe

useful activities that will benefit both the environment and the public at large

The World Environment 1972-1992 O. El-Kholy, 2012-12-06 Our planet is under siege Assaults on the atmosphere the greenhouse effect the depletion of the ozone layer and increasing air pollution pose a still unquantified threat to human life The dumping of hazardous wastes and land based sources of pollution present a similar threat to the oceans On land we are destroying a tropical forest the size of Austria every year and more than a hundred species of wild plants and animals are lost forever each day When the General Assembly of the United Nations established UNEP it charged us with reporting on the changing state of the world s environment tracking the underlying causes of change and working with governments to develop responses to those changes Every year since 1974 UNEP has produced a State of the Environment report focusing on one or more emerging environmental issues and always stressing the human factor the impact of environmental quality on people and society Three times since its inception 1982 1987 and 1992 UNEP has undertaken a more wide ranging study The results of the present study are the most disturbing of the three However not all the signs are negative Throughout the 1970s and into the 1980s UNEP was able to report progress in some important areas Environmental monitoring capacity was being rapidly improved in many parts of the world and Ministries of the Environment were being set up in an attempt to deal with environmental threats in a more coherent way

Plant Genetic Conservation Nigel Maxted, B.V. Ford-Lloyd, J.G. Hawkes, 2013-12-01 The recent development of ideas on biodiversity conservation was already being considered almost three quarters of a century ago for crop plants and the wild species related to them by the Russian geneticist N Vavilov He was undoubtedly the first scientist to understand the importance for humankind of conserving for utilization the genetic diversity of our ancient crop plants and their wild relatives from their centres of diversity His collections showed various traits of adaptation to environmental extremes and biotypes of crop diseases and pests which were unknown to most plant breeders in the first quarter of the twentieth century Later in the 1940s 1960s scientists began to realize that the pool of genetic diversity known to Vavilov and his colleagues was beginning to disappear Through the replacement of the old primitive and highly diverse land races by uniform modern varieties created by plant breeders the crop gene pool was being eroded The genetic diversity of wild species was equally being threatened by human activities over exploitation habitat destruction or fragmentation competition resulting from the introduction of alien species or varieties changes and intensification of land use environmental pollution and possible climate change
