Economics And The Environment A Signalling And Incentives Approach:

Economics and the Environment Ian Wills, 2020-09-13 Coordinating our use of the earth's natural resources is not easy. Resource users are many, their goals diverse and their impacts on the environment often uncertain. How we use those resources depends on the signals and incentives we receive from either the market or our governments. These systems encourage certain uses of natural resources but they are not perfect. We harm the environment not out of malice but because we do not know the consequences of our actions or the incentives for harm are too great to ignore. Economics and the Environment argues that by lowering the cost and improving the quality of the necessary signals and incentives we can better reconcile our diverse interests in the environment. It introduces an economic way of thinking about environmental issues without assuming a background in economics: how the economy and the environment interact, how resource use is coordinated in ideal market and planned economies, the barriers to ideal signalling and incentives in real markets and real government planning, the economist's tools for dealing with natural resource issues, the uncertainty and complexity of environmental issues, climate change, water rights, air pollution and overharvesting of common resources. This second edition of Economics and the Environment is fully updated and includes new material on sustainability, valuation of environmental changes, the prospects for international cooperation under the Kyoto Protocol and the problems of defining and enforcing measures to protect biodiversity. It offers students in both economics and environmental studies programs a coherent framework for understanding our major environmental problems. Ian Wills succeeds in providing a fresh perspective, a very interesting and informative textbook. **Economic Record**

The Politics of

Globalisation and Polarisation Maurice Mullard, 2004-01-01 This book deals with the nature of contemporary globalisation. Maurice Mullard aims to show that globalisation is not an inescapable unstoppable process somehow beyond human control, rather that it represents and is being shaped by a series of deliberate policy choices and policy decisions. The emphasis of this fascinating work is on how these policy choices are creating new forms of economic inequalities and also political elites that distort the democratic process.

Cost-Benefit Analysis and Distributional Preferences Helen Scarborough, Jeff

Bennett, 2012-01-01 Helen Scarborough and Jeff Bennett have produced a work that is genuinely path breaking. As is often the case with path breaking work, the idea is simple enough: if people can respond to choice experiments in ways that tell us a lot about what they value and how much they value it, why would they not be able to respond to choice experiments where the options offered have different distributional consequences? Such simple ideas evade implementation not because they are so hard to think up but because it is so easy to dismiss them as unthinkable. All credit goes to Scarborough and Bennett for busting through this particular unthinkable barrier. The authors may be surprised by the magnitude and the nature of the impact this work eventually enjoys. From the foreword by Alan Randall, The University of Sydney, Australia and The Ohio State

University US This pathbreaking study illustrates and enhances the potential of costbenefit analysis as a tool for decision making Advancing the incorporation of equity preferences in policy analysis the authors demonstrate the application of choice modelling to the estimation of distributional weights suitable for inclusion in a costbenefit analytical framework A platform for discussion of the challenges and opportunities of this approach is presented in the form of a detailed case study designed to estimate community preferences for different intergenerational distributions While the case study is focused on natural resource management and environmental policy the conceptual and methodological advances illustrated by the authors are relevant and applicable to a wider array of policy deliberations This book will prove a challenging and thought provoking read for academics students and policymakers with an interest in environmental issues and or public sector economics

The Cambridge Handbook of Social Sciences in Australia Ian McAllister, Steve Dowrick, Riaz Hassan, 2003-08-07 First published in 2003 The Cambridge Handbook of Social Sciences in Australia is a high quality reference on significant research in Australian social sciences The book is divided into three main sections covering the central areas of the social sciences economics political science and sociology Each section examines the significant research in the field placing it within the context of broader debates about the nature of the social sciences and the ways in which institutional changes have shaped how they are defined taught and researched

The Choice Modelling Approach to Environmental Valuation Jeff Bennett, Russell Blamey, 2001-01-01 a very useful single source for those interested in environmental evaluation using choice models David A Hensher Australian Journal of Environmental Management this book can serve as a firm basis to start understanding what CM is about Jes s Barreiro Hurl European Review of Agricultural Economics Choice Modelling is a technique that has recently emerged as a means of estimating the demand for environmental goods and the benefits and costs associated with them The aims of the book are fourfold to introduce the technique in the environmental context to demonstrate its use in a range of case studies to provide insights into some methodological issues to explore the prospects for the technique
