Walstad, John Charles Soper, 1991 The Developmental Economic Education Program DEEP was launched in 1964 by the Joint Council on Economic Education as an experimental program in three school districts By 1989 there were 1 836 school districts enrolled in DEEP covering some 39 percent of the precollege student population This book tells the story of DEEP an effort to improve the economics

education curriculum by involving teachers administrators universities and businesses in a curriculum change partnership This current look at the DEEP experience is divided into five major parts Part I consists of four chapters that give a rationale for economic education and explain in more detail the features of the DEEP model Part II focuses on the research and evaluation that have been conducted over the 25 year history of DEEP and on related studies of economic understanding among students in secondary and elementary grades The next two parts offer case studies of how DEEP works Part III looks at DEEP operations and issues in four diverse states Part IV shows how the DEEP process works in six different school districts In part V the focus shifts from the present to the future these chapters discuss the future of DEEP in the context of educational reform requirements for new curriculum materials needs of school districts and leadership from the Joint Council on Economic Education DB *Economic Education in the Schools* National Task Force on Economic Education (U.S.),1961

*The Economics of Education* International Economic Association,1966 *The Economics of Education* John Sheehan,2012 This book is a survey of the principal aspects of the economics of education such as the demand for education as consumption and as an investment good education and economic growth education and manpower needs and the finance of education In some cases in recent years economic theory has been applied to educational problems in order to gain an insight into the workings of the educational system The result has been a certain amount of confusion and distrust among teachers and educationists confusion because some theoretical aspects are not easily understood and distrust of the economist s intrusion into educational policy making This book overcomes these problems by making minimal demands on prior knowledge of economics and by emphasizing the limitations of economic analysis applied to policy matters

International Encyclopedia of Economics of Education Martin Carnoy,1995 This work offers an understanding of where the economics of education has been where it is heading and where it needs to go in the future to provide further insights into the human role in production and the production of human skills valued in the labour market **The Economics of Education** International Economic Association,1966 **The economics of education** ,1969 **An International Perspective on Economic Education** William B. Walstad,2012-10-02 Economics is taught in some form in the secondary schools of nations throughout the world The subject is rarely taught in elementary schools and while economics courses are offered in universities the majority of students end their formal education with secondary school Thus the best opportunity for the economic education of the youth of a nation occurs in secondary schools This book examines economic education at this critical level of the educational system The teaching of economics in secondary schools varies across countries These differences occur because of history the structure of education and other national factors At the same time there are common elements in the economic education of many countries especially in content coverage This contrast between the common features and the uniqueness of economic education in secondary schools of major industrial nations exemplifies the international perspective presented in this book The international perspective is developed in the six sections of the volume

The first section discusses why nations should include economics in school curricula and presents a framework for teaching economics that should have global appeal. Dissension and consensus on economic issues among North American and European economists are examined in the second section. The third section surveys the U.S. research literature on precollege economic education and assesses the current state of economics instruction in U.S. schools. The economics curricula and educational practices in seven other nations—the U.K., Canada, Japan, Germany, Austria, Korea, and Australia—are described in the fourth and fifth sections. The fifth section also presents international comparisons of economic understanding based on national testing in six of those nations. The sixth and final section explores the role of economic education in centrally planned economies and its effects on the transition to a market economy using Russia, Bulgaria, and China as case studies.
