Coordinating our use of the earth's natural resources is not easy. Resource users are many, their goals diverse and their impacts on the environment often uncertain. How we use those resources depends on the signals and incentives we receive from either the market or our governments. These systems encourage certain uses of natural resources but they are not perfect. We harm the environment not out of malice but because we do not know the consequences of our actions or the incentives for harm are too great to ignore. **Economics and the Environment** argues that by lowering the cost and improving the quality of the necessary signals and incentives we can better reconcile our diverse interests in the environment. It introduces an economic way of thinking about environmental issues without assuming a background in economics: how the economy and the environment interact, how resource use is coordinated in ideal market and planned economies, the barriers to ideal signalling and incentives in real markets and real government planning, the economist's tools for dealing with natural resource issues, the uncertainty and complexity of environmental issues, climate change, water rights, air pollution and overharvesting of common resources. This second edition of **Economics and the Environment** is fully updated and includes new material on sustainability, valuation of environmental changes, the prospects for international cooperation under the Kyoto Protocol and the problems of defining and enforcing measures to protect biodiversity. It offers students in both economics and environmental studies programs a coherent framework for understanding our major environmental problems. Ian Wills succeeds in providing a fresh perspective, a very interesting and informative textbook. **Economic Record**. **Green Business** Nevin Cohen, 2011-06-28.
