Economics Of Landscape And Wildlife Conservation

Stanislav E. Shmelev

Economics Of Landscape And Wildlife Conservation:

The Economics of Landscape and Wildlife Conservation Stephan Dabbert, 1998 In recent years landscape and wildlife conservation has attracted increased attention from environmentalists and policy makers There have been policies within the European Union aimed at conserving wildlife and landscape in Europe for more than a decade and appraisal of these policies is opportune A workshop was therefore held at the University of Hohenheim in September 1996 to examine critical issues associated with these policies This workshop was one of a series each focusing on a key theme as part of the EU Concerted Action Policy measures to control environmental impacts from agriculture This book presents a selection of revised papers from this workshop The overall perspective is an economic one with several chapters reviewing analytical methods economic valuation of the benefits of agricultural landscapes and the costs and benefits of wildlife conservation These are set in the context of the Common Agricultural Policy and environmental policies in the EU The book represents important reading for agricultural and environmental economists as well as those concerned with ecology and conservation *Landscape*

Economics Colin Price, 2017-10-12 This revised and expanded edition of Colin Price s seminal publication provides a richly comprehensive and up to date coverage of landscape economics a subject which has until now been addressed only in limited aspects Although much of the book s discussion is based upon natural resources and environmental economics the author presents a wide and integrative view drawing from aesthetic psychological social and political perspectives and applying a critical use of economic concepts and challenges to different schools of thought on the landscape This new edition includes new ideas and critiques on environmental valuation more focused critiques of stated preference methods political alternatives to economic valuation and of the rationale of discounting future values and new evaluative techniques particularly price premia for products with a landscape provenance For those interested in the theoretical aspects of aesthetic valuation and for those who seek solutions to practical problems of aesthetic conservation amelioration and enhancement this new edition gives an overview of evaluative techniques of their potential problems and of possible solutions The updates are a major contribution to the growing literature in the field Peak Oil, Economic Growth, and Wildlife

Conservation J. Edward Gates, David L. Trauger, Brian Czech, 2014-11-20 The proposed book focuses on one of the most important issues affecting humankind in this century Peak Oil or the declining availability of abundant cheap energy and its effects on our industrialized economy and wildlife conservation Energy will be one of the defining issues of the 21st Century directly affecting wildlife conservation wherever energy extraction is a primary economic activity and indirectly through deepening economic recessions Since cheap abundant energy has been at the core of our industrial society and has resulted in the technological advancements we enjoy today the peak in world oil extraction would potentially have major impacts on civilization unless we prepare well in advance One potential economic solution covered in the book would be a Steady State Economy with a stable population and per capita consumption particularly in such industrialized countries as the United

States Furthermore the lack of cheap abundant energy directly and indirectly affects conservation efforts by professional societies and federal and state agencies and NGOs concerned with wildlife issues We need to recognize these potential problems and prepare as much as possible for the consequences stemming from them **Landscape Amenities** Isabel Vanslebrouck, Guido Van Huylenbroeck, 2005-09-14 This book maps points of common understanding and cooperation in the interpretation of landscapes These interfaces appear between cultures between natural and human sciences lay people and experts time and space preservation and use ecology and semiosis The book compares how different cultures interpret landscapes examines how cultural values are assessed explores new tools for assessment traces the discussion about landscape authenticity and finally draws perspectives for further research **The Routledge Companion to Landscape Studies** Peter Howard, Ian Thompson, Emma Waterton, Mick Atha, 2018-09-03 This new edition of The Routledge Companion to Landscape Studies contains an updated and expanded selection of original chapters which explore research directions in an array of disciplines sharing a concern for landscape a term which has many uses and meanings It features 33 revised and or updated chapters and 14 entirely new chapters on topics such as the Anthropocene Indigenous landscapes challenging landscape Eurocentrism photography and green infrastructure planning The volume is divided into four parts Experiencing landscape Landscape heritage and culture Landscape society and justice and Design and planning for landscape Collectively the book provides a critical review of the various fields related to the study of landscapes including the future development of conceptual and theoretical approaches as well as current empirical knowledge and understanding It encourages dialogue across disciplinary barriers and between academics and practitioners and reflects upon the implications of research findings for local national and international policy in relation to landscape The Companion provides a comprehensive and up to date guide to current thinking about landscapes and serves as an invaluable point of reference for scholars researchers and graduate students alike The New Dimensions of the European Landscapes R.H.G Jongman, 2005-05-09 The European Landscape is under stress of changing land use and a changing attitude of its users Globalization the disappearance of the iron curtain and the recent EU enlargement to 25 countries have changed the economic and environmental dimensions of Europe Europe is changing its face from a western and eastern part to one European Union and to fast connections between its centres of activity The rural and cultural heritage of Europe has to be adapted to cope with this change However its landscape is worth to be conserved as well because it represents the European history in the same way as castles and churches It even more represents the history of the common people because it has been the tradition of the rural population that made these landscapes It cannot be prevented that Europe is changing and it is good that Europe adapts to the new dimensions of the world We in Europe have to define what we think is important and what must be conserved what can be adapted to be used for new functions and what can be abolished because it has no value These decisions will determine the new dimensions of the European landscapes The Frontis Workshop on the New Dimensions of the European Landscape was

held on 10-12 June 2002 Wageningen University and Research Centre organized this workshop aiming to develop visions on the landscape in Europe its development and design in the future and to strengthen the international network in landscape planning

Models for Planning Wildlife Conservation in Large Landscapes Joshua Millspaugh, Frank R. Thompson, 2011-04-28 A single resource volume of information on the most current and effective techniques of wildlife modeling Models for Planning Wildlife Conservation in Large Landscapes is appropriate for students and researchers alike The unique blend of conceptual methodological and application chapters discusses research applications and concepts of modeling and presents new ideas and strategies for wildlife habitat models used in conservation planning The book makes important contributions to wildlife conservation of animals in several ways 1 it highlights historical and contemporary advancements in the development of wildlife habitat models and their implementation in conservation planning 2 it provides practical advice for the ecologist conducting such studies and 3 it supplies directions for future research including new strategies for successful studies Intended to provide a recipe for successful development of wildlife habitat models and their implementation in conservation planning the book could be used in studying wildlife habitat models conservation planning and management techniques Additionally it may be a supplemental text in courses dealing with quantitative assessment of wildlife populations Additionally the length of the book would be ideal for graduate student seminar course Using wildlife habitat models in conservation planning is of considerable interest to wildlife biologists With ever tightening budgets for wildlife research and planning activities there is a growing need to use computer methods Use of simulation models represents the single best alternative However it is imperative that these techniques be described in a single source Moreover biologists should be made aware of alternative modeling techniques It is also important that practical guidance be provided to biologists along with a demonstration of utility of these procedures Currently there is little guidance in the

wildlife or natural resource planning literature on how best to incorporate wildlife planning activities particularly community based approaches Now is the perfect time for a syntheistic publication that clearly outlines the concepts and available methods and illustrates them Only single resource book of information not only on various wildlife modeling techniques but also with practical guidance on the demonstrated utility of each based on real world conditions Provides concepts methods and applications for wildlife ecologists and others within a GIS context Written by a team of subject area experts
