Landscape Ecology in Theory and Practice Monica G. Turner, Robert H. Gardner, 2015-10-29 This work provides an in-depth analysis of the origins of landscape ecology and its close alignment with the understanding of scale, the causes of landscape pattern, and the interactions of spatial pattern with a variety of ecological processes. The text covers the quantitative approaches that are applied widely in landscape studies, with emphasis on their appropriate use and interpretation. The field of landscape ecology has grown rapidly during this period; its concepts and methods have matured, and the published literature has increased exponentially. Landscape research has enhanced understanding of the causes and consequences of spatial heterogeneity and how these vary with scale, and they have influenced the management of natural and human-dominated landscapes. Landscape ecology is now considered mainstream, and the approaches are widely used in many branches of ecology and are applied not only in terrestrial settings but also in aquatic and marine systems. In response to these rapid developments, an updated

edition of Landscape Ecology in Theory and Practice provides a synthetic overview of landscape ecology including its development the methods and techniques that are employed the major questions addressed and the insights that have been gained

Principles of Terrestrial Ecosystem Ecology F Stuart Chapin III, Pamela A. Matson, Peter Vitousek, 2011-09-02

Ecosystem ecology regards living organisms including people and the elements of their environment as components of a single integrated system The comprehensive coverage in this textbook examines the central processes at work in terrestrial ecosystems including their freshwater components It traces the flow of energy water carbon and nutrients from their abiotic origins to their cycles through plants animals and decomposer organisms As well as detailing the processes themselves the book goes further to integrate them at various scales of magnitude those of the ecosystem the wider landscape and the globe It synthesizes recent advances in ecology with established and emerging ecosystem theory to offer a wide ranging survey of ecosystem patterns and processes in our terrestrial environment Featuring review questions at the end of each chapter suggestions for further reading and a glossary of ecological terms Principles of Terrestrial Ecosystem Ecology is a vitally relevant text suitable for study in all courses in ecosystem ecology Resource managers and researchers in many fields will welcome its thorough presentation of ecosystem essentials

Headway in Spatial Data Handling Anne Ruas, Christopher Gold, 2008-08-09 Geographic information is a key element for our modern society Put simply it is information whose spatial and often temporal location is fundamental to its value and this distinguishes it from many other types of data and analysis For sustainable development climate change or more simply resource sharing and economic development this information helps to facilitate human activities and to foresee the impact of these activities in space as well as inversely the impact of space on our lives The International Symposium on Spatial Data Handling SDH is a primary research forum where questions related to spatial and temporal modelling and analysis data integration visual representation or semantics are raised The first symposium commenced in 1984 in Zurich and has since been organised every two years under the umbrella of the International Geographical Union Commission on Geographical Information Science <http://www.igugis.org> Over the last 28 years the Symposium has been held in 1 Zurich 1984 2 Seattle 1986 3 Sydney 1988 4 Zurich 1990 5 Charleston 1992 6 Edinburgh 1994 7 Delft 1996 8 Vancouver 1998 9 Beijing 2000 10 Ottawa 2002 11 Leicester 2004 12 Vienna 2006 This book is the proceedings of the 13 International Symposium on Spatial Data Handling

Landscape Function and Disturbance in Arctic Tundra James F. Reynolds, John D. Tenhunen, 2013-04-17 Following the discovery of large petroleum reserves in northern Alaska the US Department of Energy implemented an integrated field and modeling study to help define potential impacts of energy related disturbances on tundra ecosystems This volume presents major findings from this study A broad range of basic and applied research topics are examined ranging from ecosystem physiology and biogeochemistry to landscape models that quantify the impact of road building on tundra hydrology and ecosystem structure It is an important resource for researchers and students interested in arctic ecology as well as for environmental managers concerned with practical issues of disturbances

Plant Microbiome: Stress Response Dilfuza Egamberdieva, Parvaiz Ahmad, 2018-02-06 This book presents state of the art research on the many facets of the plant microbiome including diversity ecology physiology and genomics as well as molecular mechanisms of plant microbe interactions Topics considered

include the importance of microbial secondary metabolites in stimulating plant growth induced systemic resistance tolerance to abiotic stress and biological control of plant pathogens The respective contributions show how microbes help plants to cope with abiotic stresses and represent significant progress toward understanding the complex regulatory networks critical to host microbe interaction and plant adaptation in extreme environments New insights into the mechanisms of microbial actions in inducing plant stress tolerance open new doors for improving the efficacy of microbial strategies and could produce new ways of economically increasing crop yields without harming the environment As such this book offers an essential resource for students and researchers with an interest in plant microbe interaction as well as several possibilities for employing the plant microbiome in the enhancement of crop productivity under future climate change scenarios

Satellite Remote Sensing and the Management of Natural Resources Nathalie Pettorelli, 2019-05-16 The ability to anticipate the impacts of global environmental changes on natural resources is fundamental to designing appropriate and optimised adaptation and mitigation strategies However this requires the scientific community to have access to reliable large scale information on spatio temporal changes in the distribution of abiotic conditions and on the distribution structure composition and functioning of ecosystems Satellite remote sensing can provide access to some of this fundamental data by offering repeatable standardised and verifiable information that is directly relevant to the monitoring and management of our natural capital This book demonstrates how ecological knowledge and satellite based information can be effectively combined to address a wide array of current natural resource management needs By focusing on concrete applied examples in both the marine and terrestrial realms it will help pave the way for developing enhanced levels of collaboration between the ecological and remote sensing communities as well as shaping their future research directions Satellite Remote Sensing and the Management of Natural Resources is primarily aimed at ecologists and remote sensing specialists as well as policy makers and practitioners in the fields of conservation biology biodiversity monitoring and natural resource management

Ecology Research Progress Sebastián I. Muñoz, 2007 The new book presents important recent research on ecology which is the study of the interrelationships between organisms and their environment including the biotic and abiotic components There are at least six kinds of ecology ecosystem physiological behavioural population and community specific topics include Acid Deposition Acid Rain Revisited Biodiversity Biocomplexity Carbon Sequestration in Soils Coral Reefs Ecosystem Services Environmental Justice Fire Ecology Floods Global Climate Change Hypoxia and Invasion

Urban Ecology Pedro Barbose, 2020-11-04 Today 55% of the world's human population lives in urban areas By 2030 up to 90% of the global human population will live in cities and the global population is expected to increase by 68% by 2050 Although land cover categorized as urban is a relatively small fraction of the total surface of the Earth urban areas are major driving forces in global environmental change habitat loss threats to biodiversity and the loss of terrestrial carbon stored in vegetation biomass These and many other factors highlight the need to understand the broad scale impacts of urban

expansion as it effects the ecological interactions between humans wildlife and plant communities The book stresses the importance of understanding ecological forces and ecosystem services in urban areas and the integration of ecological concepts in urban planning and design The creation of urban green spaces is critical to the future of urban areas enhancing human social organization human health and quality of life
