Yellowstone's Destabilized Ecosystem Frederic H. Wagner, 2006-05-25 Wagner one of our most distinguished wildlife biologists is a strong critic of ecological practices in the national parks This book provides an assessment of the ecological history of Yellowstone's northern range since before the park existed showing the impact of US Park Service policies on the health of the areas they oversee He demonstrates that elk had been historically rare throughout the region and that overgrazing by elk has seriously degraded the landscape and altered the structure of the area This is a major contribution to reconstructing the ecology of this region over the course of the past 500 years It is also a critique of US Park Service management policies and their stewardship of the nation's most cherished natural areas Wagner's book will generate substantial attention and debate both in the scientific and policy management communities **Selected Acquisitions of the Library** Indiana University, Bloomington.
