## **Ground Subsidence:**

Ground Subsidence Tony Waltham, 1989      **Land Subsidence in the United States** Devin L. Galloway, David Richard Jones, S. E. Ingebritsen, 1999 Land subsidence LS is a gradual settling or sudden sinking of the Earth's surface owing to subsurface movement of earth materials More than 80% of the identified LS in the nation is due to our exploitation of underground water UW This report illustrates the 3 basic mechanisms by which human influence on UW causes land subsidence compaction of aquifer systems dewatering of organic soils and mass wasting through dissolution and collapse of susceptible earth materials Also examines the role that water management groups play in mitigating subsidence damages Color and B W photos maps and drawings      **Mitigating Losses from Land Subsidence in the United States** Panel on Land Subsidence, 1991-01-01      **Land Subsidence, in the San Joaquin Valley, California, as of 1972** Joseph Fairfield Poland, B. E. Lofgren, R. L. Ireland, R. G. Pugh, 1975 A history of land subsidence caused by water level decline in the San Joaquin Valley from the 1920 s to 1972      **Investigation of land subsidence and earth fissures in Cedar Valley, Iron County, Utah** Paul Inkenbrandt, Willian Lund, Mike Lowe, Tyler Knudsen, Steve Bowman, 2014-03-12 This 116 page report presents the results of an investigation by the Utah Geological Survey of land subsidence and earth fissures in Cedar Valley Iron County Utah Basin fill sediments of the Cedar Valley Aquifer contain a high percentage of fine grained material susceptible to compaction upon dewatering Groundwater discharge in excess of recharge groundwater mining has lowered the potentiometric surface in Cedar Valley as much as 114 feet since 1939 Groundwater mining has caused permanent compaction of fine grained sediments of the Cedar Valley aquifer which has caused the land surface to subside and a minimum of 8 3 miles of earth fissures to form Recently acquired interferometric synthetic aperture radar imagery shows that land subsidence has affected approximately 100 mi in Cedar Valley but a lack of accurate historical benchmark elevation data over much of the valley prevents its detailed quantification Continued groundwater mining and resultant subsidence will likely cause existing fissures to lengthen and new fissures to form which may eventually impact developed areas in Cedar Valley This report also includes possible aquifer management options to help mitigate subsidence and fissure formation and recommended guidelines for conducting subsidence related hazard investigations prior to development      **Land Subsidence** International Symposium on Land Subsidence, Tokyo, 1969, 1969      *Sediment Transport Research - Further Recent Advances* Andrew J. Manning, 2024-08-21 The effective governance and administration of many aquatic and terrestrial environments requires a detailed understanding of sediment transport and its behavioral dynamics This has both environmental and economic implications especially where there is any anthropogenic involvement Sedimentary processes such as erosion scour deposition and consolidation can fluctuate depending on whether their compositional matrix is purely cohesive noncohesive or a combination of both types With many contributing factors the prediction of sedimentary movement is often made using numerical modeling tools as they can estimate the various spatial and temporal fluxes However due to

the complex behavior of natural sediments scientists and other specialists continue to conduct research into the many aspects that influence sediment transport Sediment Transport Research Further Recent Advances is a book that draws on the most recent world class scientific research on sediment transport topics including computational fluid dynamics numerical modeling particle properties and characteristics beach morphology soil erosion flocculation processes sand nourishment geomorphology water quality aspects sedimentary related legislation and many more The research was carried out by researchers who specialize in sediment transport and related processes **Man-induced Land Subsidence** Thomas L.
