Grounding Cognition The Role Of Perception And Action In Memory Language And Thinking:

Grounding Cognition Diane Pecher, Rolf A. Zwaan, 2005-01-10 One of the key questions in cognitive psychology is how people represent knowledge about concepts such as football or love. Some researchers have proposed that concepts are represented in human memory by the sensorimotor systems that underlie interaction with the outside world. These theories represent developments in cognitive science to view cognition no longer in terms of abstract information processing but in terms of perception and action. In other words, cognition is grounded in embodied experiences. Studies show that sensory perception and motor actions support understanding of words and object concepts. Moreover, even understanding of abstract and emotion concepts can be shown to rely on more concrete embodied experiences. Finally, language itself can be shown to be grounded in sensorimotor processes. This book brings together theoretical arguments and empirical evidence from several key researchers in this field to support this framework. Embodied and grounded cognition Anna Borghi, Diane Pecher, 2012-01-01 In the last 10-15 years, the embodied and grounded cognition approach has become widespread in all fields related to cognitive science, such as cognitive and social psychology, neuroscience, philosophy, anthropology, computational modelling, and robotics. According to this approach, our cognitive activity is grounded in sensory-motor processes and situated in specific contexts and situations. Therefore, in this view, concepts consist of the reactivation of the same neural pattern that is present when we perceive and/or interact with the objects they refer to. In the same way, understanding language would imply forming a mental simulation of what is linguistically described. This simulation would entail the recruitment of the same neurons that are activated when actually acting or perceiving the situation, action, emotion, object, or entity described by language. In the last years, a lot of evidence has been collected in favour of EC and GC view. The aim of this Research Topic is twofold. First, it intends to give an idea of the field of embodied and grounded cognition in its broadness. We therefore intend to invite scientists of different disciplines: anthropology, philosophy, linguistics, cognitive and social psychology, neuroscience, computer science, to submit their proposals. The second aim of this Research Topic is to focus on some challenges that, in our opinion, embodied and grounded theories of cognition need to face. First, we believe that one important challenge for EC and GC views is to account for the way the so-called abstract concepts and abstract words are represented. Evidence on the representation of concrete concepts and words is compelling, whereas evidence on abstract concepts representation is still too scarce and limited to restricted domains. We therefore welcome proposals dealing with this complex issue. Second, we think that embodied and grounded theories of cognition would need to formulate more precise hypotheses and that, in general, within the field, a larger theoretical effort should be made. It is striking that even if a lot of work in the field of computational modelling and robotics starts from an embodied approach, experimental and modelling work on embodied cognition remain somehow separate. We therefore invite researchers to submit papers proposing models which might help to explain phenomena as well as to constrain and specify in more detail the predictions and the claims.

advanced within the framework of EC and GC theories **The Handbook of Language Emergence** Brian MacWhinney, William O'Grady, 2018-05-01 This authoritative handbook explores the latest integrated theory for understanding human language offering the most inclusive text yet published on the rapidly evolving emergentist paradigm Brings together an international team of contributors including the most prominent advocates of linguistic emergentism Focuses on the ways in which the learning processing and structure of language emerge from a competing set of cognitive communicative and biological constraints Examines forces on widely divergent timescales from instantaneous neurolinguistic processing to historical changes and language evolution Addresses key theoretical empirical and methodological issues making this handbook the most rigorous examination of emergentist linguistic theory ever Stevens' Handbook of Experimental Psychology and Cognitive Neuroscience, Language and Thought , 2018-02-01 III Language discourse and dialogue reading creativity speech production concepts and categorization culture and cognition reasoning sentence processing bilingualism speech perception spatial cognition word processing semantic memory moral reasoning **A Theory of the Microdynamics of Occurrent Thought** Herbert S. Demmin, 2015-08-13 A Theory of the Microdynamics of Occurrent Thought T2 is based on a reflective analysis of occurrent thoughts OTs in the spirit of phenomenological philosophy and proposes that such thoughts consist of a specific combination of ten or fewer micro phases possessing phenomenal contents that are so brief that most of us are unaware of their existence The theory specifies the movements of an operating I or central executive in as and among these phases in the service of processing their contents by fleetingly becoming them followed by one of several transitions of attention that bring about different degrees of their objectification The relatively fixed sequences of the phases of OTs along with an operating I s immersion in and face up or face down surfacing from their phenomenal contents form a structure that carries and drives on line cognition supporting the view that they play a causal role in human information processing Two categories two forms and fifteen different types of OTs are defined based on the transitions of an operating I therein This book includes detailed illustrations of the different types of OTs *The Psychology of Learning and Motivation* , 2011-04-01 The Psychology of Learning and Motivation series publishes empirical and theoretical contributions in cognitive and experimental psychology ranging from classical and instrumental conditioning to complex learning and problem solving Each chapter thoughtfully integrates the writings of leading contributors who present and discuss significant bodies of research relevant to their discipline Volume 51 includes chapters on such varied topics as emotion and memory interference electrophysiology mathematical cognition and reader participation in narrative Volume 54 of the highly regarded Psychology of Learning and Motivation series An essential reference for researchers and academics in cognitive science Relevant to both applied concerns and basic research *Foundations of Musical Grammar* Lawrence M. Zbikowski, 2017-08-24 Foundations of Musical Grammar makes a unique contribution to music theory by building on recent research in cognitive science and theoretical perspectives adopted from

cognitive linguistics to present an account of the foundations of musical grammar In presenting this account it engages with music and the emotions gesture and social dance *Language Learning and Teaching in a Multilingual World* Marie-Françoise Narcy-Combes, Jean-Paul Narcy-Combes, Julie McAllister, Malory Leclère, Grégory Miras, 2019-03-06 The majority of people around the world live in multilingual societies and so it follows that plurilingualism should be considered normal This book proposes a flexible and adaptive framework for designing and implementing language learning environments and tasks which will be useful for practitioners working in classrooms where many languages are already spoken The authors begin by presenting a state of the art review of current research on language learning language teaching and multilingual language acquisition This is followed by a qualitative review of 37 multilingual research projects which are treated as case studies to inform the practical guidance that constitutes the remainder of the book The information and practical framework contained within this book will be of interest to researchers teachers and teacher educators

Or do they reflect fundamental differences in thought In this sea of differences are there any semantic universals Which categories might be given by the genes which by culture and which by language And what might the cross linguistic similarities and differences contribute to our understanding of conceptual and linguistic development The kinds of mapping principles structures and processes that link language and non linguistic knowledge must accommodate not just one language but the rich diversity that has been uncovered The integration of knowledge and methodologies necessary for real progress in answering these questions has happened only recently as experimental approaches have been applied to the cross linguistic study of word meaning In *Words and the Mind* Barbara Malt and Phillip Wolff present evidence from the leading researchers who are carrying out this empirical work on topics as diverse as spatial relations events emotion terms motion events objects body part terms causation color categories and relational categories By bringing them together Malt and Wolff highlight some of the most exciting cross linguistic and cross cultural work on the language thought interface from a broad array of fields including linguistics anthropology cognitive and developmental psychology and cognitive neuropsychology Their results provide some answers to these questions and new perspectives on the issues surrounding them

Mental States Andrea C. Schalley, Drew Khlentzos, 2007-12-13 Collecting the work of linguists psychologists neuroscientists archaeologists artificial intelligence researchers and philosophers this volume presents a richly varied picture of the nature and function of mental states Starting from questions about the cognitive capacities of the early hominin *Homo floresiensis* the essays proceed to the role mental representations play in guiding the behaviour of simple organisms and robots thence to the question of which features of its environment the human brain represents and the extent to which complex cognitive skills such as language acquisition and comprehension are impaired when the brain lacks certain important neural structures Other papers explore topics ranging from nativism to the presumed constancy of categorization across signed and spoken languages from the formal representation of metaphor actions and vague language to philosophical questions about conceptual schemes and colours Anyone interested in mental states will find much to reward them in this fine volume

Action and Language Integration in Cognitive Systems Angelo Cangelosi, 2012-07-12 Recent theoretical and experimental research on action and language processing in humans and animals clearly demonstrates the strict interaction and co dependence between language and action This has been demonstrated in neuroscientific investigations e g Cappa Pulvermuller 2003 Rizzolatti Pecher Massera et al 2008 All these studies have important implication both for the understanding of the action basis of cognition in natural and artificial cognitive systems as well as for the design of cognitive and communicative capabilities in robots Cangelosi et al 2005 The journal *Frontiers in Neurorobotics* is seeking submissions of new articles in the topic of action and language integration both in natural cognitive systems e g humans and animals and in artificial cognitive agents robots and simulated agents Manuscripts can regard new theoretical and computational investigations as well as new neuroscientific and psychological investigations Review articles in this topic are also welcome

Theory and Data in Cognitive Linguistics Nikolas Gisborne, Willem B. Hollmann, 2014-09-24 Cognitive linguistics has an honourable tradition of paying respect to naturally occurring language data and there have been fruitful interactions between corpus data and aspects of linguistic structure and meaning More recently dialect data and sociolinguistic data collection methods theoretical concepts have started to generate interest There has also been an increase in several kinds of experimental work However not all linguistic data is simply naturally occurring or derived from experiments with statistically robust samples of speakers Other traditions especially the generative tradition have fruitfully used introspection and questions about the grammaticality of different strings to uncover patterns which might otherwise have gone unnoticed The divide between generative and cognitive approaches to language is intimately connected to the kinds of data drawn on and the way in which generalisations are derived from these data The papers in this volume explore these issues through the lens of synchronic linguistic analysis the study of language change typological investigation and experimental study Originally published in *Studies in Language* Vol 36 3 2012

The Cognitive Perspective on the Polysemy of the English Spatial Preposition Over Maria Brenda, 2014-09-18 This volume investigates the English spatial preposition over and prepositions in general frequently regarded as function words with little semantic content and shows that they encode rich and diverse information both grammatical and semantic An important research endeavor which the present study undertakes is an examination of whether the meaning of the preposition over is in fact complex enough for the preposition to be treated as a lexical unit rather than merely a functional one In order to achieve that goal the gathered linguistic material is analyzed first and foremost in terms of its semantic content that is the geometric relations between the trajector and landmark and the functional consequences of such relations The research into the morphology of prepositions reveals a considerable area of overlap between prepositions and adverbs adverbial particles and prefixes as well as nouns verbs and adjectives The discussion of the syntax of prepositions is illustrated with labeled tree diagrams of selected sentences to show how the preposition over and the prepositional phrases it heads are embedded in larger structures of the English sentence An important finding of the present study is the confirmation that the spatial preposition over encodes a broad range of geometrical and functional relations as well as rich grammatical information This book will be of interest to students and researchers interested in semantic and conceptual aspects of prepositions meaning construction human cognition and management of space

Musical Sense-Making Mark Reybrouck, 2020-11-29 *Musical Sense Making Enaction Experience and Computation* broadens the scope of musical sense making from a disembodied cognitivist approach to an experiential approach Revolving around the definition of music as a temporal and sounding art it argues for an interactional and experiential approach that brings together the richness of sensory experience and principles of cognitive economy Starting from the major distinction between in time and outside of time processing of the sounds this volume provides a conceptual and operational framework for dealing with sounds in a real time listening situation relying heavily on the theoretical

groundings of ecology cybernetics and systems theory and stressing the role of epistemic interactions with the sounds These interactions are considered from different perspectives bringing together insights from previous theoretical groundings and more recent empirical research The author s findings are framed within the context of the broader field of enactive and embodied cognition recent action and perception studies and the emerging field of neurophenomenology and dynamical systems theory This volume will particularly appeal to scholars and researchers interested in the intersection between music philosophy and or psychology

Cognitive Linguistics - Key Topics Ewa Dąbrowska,Dagmar Divjak,2019-07-08 The key topics discussed in this book illustrate the breadth of cognitive linguistic research and include semantic typology space fictive motion argument structure constructions and prototype effects in grammar New themes such as individual differences emergence and default non salient interpretations also receive coverage

Toward Robotic Socially Believable Behaving Systems - Volume I Anna Esposito,Lakhmi C. Jain,2016-03-21 This volume is a collection of research studies on the modeling of emotions in complex autonomous systems Several experts in the field are reporting their efforts and reviewing the literature in order to shed lights on how the processes of coding and decoding emotional states took place in humans which are the physiological physical and psychological variables involved invent new mathematical models and algorithms to describe them and motivate these investigations in the light of observable societal changes and needs such as the aging population and the cost of health care services The consequences are the implementation of emotionally and socially believable machines acting as helpers into domestic spheres where emotions drive behaviors and actions The contents of the book are highly multidisciplinary since the modeling of emotions in robotic socially believable systems requires a holistic perspective on topics coming from different research domains such as computer science engineering sociology psychology linguistic and information communication The book is of interest both to experts and students since last research works on a so complex multidisciplinary topic are described in a neat and didactical scientific language

Contacts and Contrasts in Cultures and Languages Barbara Lewandowska-Tomaszczyk,2019-02-18 This volume provides descriptions and interpretations of social and cognitive phenomena as well as processes that emerge at the interface of languages and cultures in the context of contrastive and contact linguistics and media discourse Different contexts are explored with rich empirical findings and authentic exemplifying materials The book includes fifteen papers divided into three parts Part 1 addresses conceptual reflection on languages and cultures in contact and contrast while Part 2 focuses on contact linguistics and borrowing Part 3 discusses cultural and linguistic aspects of media discourses

The Agile Mind Wilma Koutstaal,2012 In this book Wilma Koutstaal covers all aspects of agile thought and how it emerges from and

interacts with memory perception emotion executive control motivation and action as well as how it is related to creativity mediated by learning and environmental input enhanced by plasticity and destroyed by rigidity The Agile Mind brings together much theory and work in cognitive neuroscience and cognitive psychology so will be a valuable resource for researchers in those fields
