Group Filters And Image Processing:

Group Filters and Image Processing Myoung An, Richard Tolimieri, 2004 **Computational Noncommutative Algebra and Applications** Jim Byrnes, Gerald Osterheimer, 2006-01-28

The fusion of algebra analysis and geometry and their application to real world problems have been dominant themes underlying mathematics for over a century. Geometric algebras introduced and classified by Clifford in the late 19th century have played a prominent role in this effort as seen in the mathematical work of Cartan, Brauer, Weyl, Chevalley, Atiyah and Bott and in applications to physics in the work of Pauli, Dirac and others. One of the most important applications of geometric algebras to geometry is to the representation of groups of Euclidean and Minkowski rotations. This aspect and its direct relation to robotics and vision will be discussed in several chapters of this multi-authored textbook which resulted from the ASI meeting. Moreover, group theory beginning with the work of Burnside, Frobenius and Schur has been influenced by even more general problems. As a result, general group actions have provided the setting for powerful methods within group theory and for the use of groups in applications to physics, chemistry, molecular biology and signal processing. These aspects too will be covered in detail. With the rapidly growing importance of and ever expanding conceptual and computational demands on signal and image processing in remote sensing, computer vision, medical image processing and biological signal processing and on neural and quantum computing, geometric algebras and computational group harmonic analysis, the topics of the book have emerged as key tools. The list of authors includes many of the world's leading experts in the development of new algebraic modeling and signal representation methodologies, novel Fourier-based and geometric transforms and computational algorithms required for realizing the potential of these new application fields. The intention of this textbook is to share their profound wisdom with the many future stars of pure and computational noncommutative algebra. A key feature of both the meeting and the book will be their presentation of problems and applications that will shape the twenty-first century computational technology base.

The Architecture of Open Source Applications, Volume II Amy Brown, Greg Wilson, 2012. Architects look at thousands of buildings during their training and study critiques of those buildings written by masters. In contrast, most software developers only ever get to know a handful of large programs well—usually programs they wrote themselves and never study the great programs of history. As a result, they repeat one another's mistakes rather than building on one another's successes. This second volume of *The Architecture of Open Source Applications* aims to change that. In it, the authors of twenty-four open source applications explain how their software is structured and why. What are each program's major components? How do they interact? And what did their builders learn during their development? In answering these questions, the contributors to this book provide unique insights into how they think.

Digital Filtering in One and Two Dimensions M. Ahmadi,M. Azimi-Sadjadi,R. Gorgui-Naguib,R. King,A. Kwabwe,2013-06-29 This book has been conceived to extend the generally published work on one and two dimensional digital filters in order to include some of the more recently developed ideas It is intended to supplement and build on the classical books which cover the fundamental concepts of the topic As a consequence of this the basic theory is stated in a compact manner and is not developed thoroughly as this would result in considerable duplication of existing books The main theme of the book has been to provide a comprehensive background to the methods available for the realization of both recursive and nonrecursive digital filters and to give an insight into some of the more recent implementation procedures The book is planned to cover one and two dimensional systems in parallel showing the techniques which are applicable in both areas and also the limitations and constraints necessary when a one dimensional technique is extended to systems of higher dimensionality The theme of the book commences with several chapters on the design of filter transfer functions to meet given specifications This is followed by a discussion of methods of implementing these in a practical system and the limitations imposed as a result of noise and finite word length Finally a discussion of some applications is included
