Physics Robert Shar,2012-12-02 Group Theoretical Methods in Physics Proceedings of the Fifth International Colloquium provides information pertinent to the fundamental aspects of group theoretical methods in physics This book provides a variety of topics including nuclear collective motion complex Riemannian geometry quantum mechanics and relativistic symmetry Organized into six parts encompassing 64 chapters this book begins with an overview of the theories of nuclear quadrupole dynamics This text then examines the conventional approach in the determination of superstructures Other chapters consider the Hamiltonian formalism and how it is applied to the KdV equation and to a slight variant of the KdV equation This book discusses as well the significant differential equations of mathematical physics that are integrable Hamiltonian systems including the equations governing self induced transparency and the motion of particles under an inverse square potential The final chapter deals with the decomposition of the tensor product of two irreducible representations of the symmetric group into a direct sum of irreducible representations This book is a valuable resource for physicists

GROUP THEORETICAL METHODS IN PHYSICS: PROCEEDINGS OF THE ... INTERNATIONAL COLLOQUIUM ON GROUP THEORETICAL METHODS IN PHYSICS .. ,1980 Group Theory Eugene Wigner,2012-12-02 Group Theory And Its Application To The Quantum Mechanics Of Atomic Spectra aims to describe the application of group theoretical methods to problems of quantum mechanics with specific reference to atomic spectra Chapters 1 to 3 discuss the elements of linear vector theory while Chapters 4 to 6 deal more specifically with the rudiments of quantum mechanics itself Chapters 7 to 16 discuss the abstract group theory invariant subgroups and the general theory of representations These chapters are

mathematical although much of the material covered should be familiar from an elementary course in quantum theory Chapters 17 to 23 are specifically concerned with atomic spectra as is Chapter 25 The remaining chapters discuss topics such as the recoupling Racah coefficients the time inversion operation and the classical interpretations of the coefficients The text is recommended for physicists and mathematicians who are interested in the application of group theory to quantum mechanics Those who are only interested in mathematics can choose to focus on the parts more devoted to that particular area of the subject Group Theoretical Methods in Physics A. Janner, T. Janssen, Michael Boon, 1976 Methods for Integration of Nonlinear Dynamical Systems A.N. Leznov, Mikhail V. Saveliev, 1992-04-22 The book reviews a large number of 1 and 2 dimensional equations that describe nonlinear phenomena in various areas of modern theoretical and mathematical physics It is meant above all for physicists who specialize in the field theory and physics of elementary particles and plasma for mathe maticians dealing with nonlinear differential equations differential geometry and algebra and the theory of Lie algebras and groups and their representations and for students and post graduates in these fields We hope that the book will be useful also for experts in hydrodynamics solid state physics nonlinear optics electrophysics biophysics and physics of the Earth The first two chapters of the book present some results from the repre sentation theory of Lie groups and Lie algebras and their counterpart on supermanifolds in a form convenient in what follows They are addressed to those who are interested in integrable systems but have a scanty vocabulary in the language of representation theory The experts may refer to the first two chapters only occasionally As we wanted to give the reader an opportunity not only to come to grips with the problem on the ideological level but also to integrate her or his own concrete nonlinear equations without reference to the literature we had to expose in a self contained way the appropriate parts of the representation theory from a particular point of view
