Group Technology Production Engineering Series:

Group Technology Inyong Ham, Katsundo Hitomi, Teruhiko Yoshida, 2012-12-06 Mass production and mass consumption so far considered virtues in a free economic society have changed. Various problems have occurred including economic stagnation, energy crisis, shortage of material resources, proliferation of pollution, lack of skilled labor, rapid changes of product design, technical innovation, and others. Moreover, individual manufacturing firms must take steps to adopt multi-product small lot sized batch type production as a type of production in order to adapt themselves to a market movement characterized by a diversified and specialty oriented society and a short product life cycle. The number of manufacturing firms worldwide that use a type of multi-product small lot sized production is expected to increase. This is so even in the United States which has been said to be a country of mass production. Multi-product small lot sized production has been considered to be a milestone to flow type mass production which has been thought to be the most effective production system. Intensive efforts have been made to investigate mass production systems from both theoretical and practical viewpoints. Few studies have been made for multi-product small lot sized production batch type manufacturing. Considering the present business circumstances faced with various difficulties, it is strongly required to establish some theories useful for making practically effective and flexible multi-product small lot sized production systems. Several effective approaches to the batch type manufacturing systems have been developed. Group technology (GT) is one such method that has steadily obtained great interest from progressive manufacturing firms all over the world.

The book is divided into two parts: the first includes papers related to intelligent systems in production engineering, while the second is dedicated to special sessions focusing on: 1. Computer Aided methods in Production Engineering, 2. Mining 4.0 and Intelligent Mining, 3. Transportation, 4. Modelling and Simulation of Production Processes, 5. Multi-Faceted Modelling of Networks and Processes, 6. Product Design and Product Manufacturing in Industry 4.0. This book is an excellent source of information for scientists in the field of manufacturing engineering and for top managers.

Rajamani,2012-12-06 Batch manufacturing is a dominant manufacturing activity in the world generating a great deal of industrial output In the coming years we are going to witness an era of mass customization of products The major problems in batch manufacturing are a high level of product variety and small manufacturing lot sizes The product variations present design engineers with the problem of designing many different parts The decisions made in the design stage significantly affect manufacturing cost quality and delivery lead times The impacts of these product variations in manufacturing are high investment in equipment high tooling costs complex scheduling and loading lengthy setup time and costs excessive scrap and high quality control costs However to compete in a global market it is essential to improve the productivity in small batch manufacturing industries For this purpose some innovative methods are needed to reduce product cost lead time and enhance product quality to help increase market share and profitability What is also needed is a higher level of integration of the design and manufacturing activities in a company Group technology provides such a link between design and manufacturing The adoption of group technology concepts which allow for small batch production to gain economic advantages similar to mass production while retaining the flexibility of job shop methods will help address some of the problems **Annual Historical Review** Rock Island Arsenal (Ill.),1980 *Group Technology and Cellular Manufacturing*

Nallan C. Suresh,John M. Kay,2012-12-06 Group Technology and Cellular Manufacturing GT CM have been widely researched areas in the past 15 years and much progress has been made in all branches of GT CM Resulting from this research activity has been a proliferation of techniques for part machine grouping engineering data bases expert system based design methods for identifying part families new analytical and simulation tools for evaluating performance of cells new types of cell incorporating robotics and flexible automation team based approaches for organizing the work force and much more however the field lacks a careful compilation of this research and its outcomes The editors of this book have commissioned leading researchers and implementers to prepare specific treatments of topics for their special areas of expertise in this broad based philosophy of manufacturing The editors have sought to be global both in coverage of topic matters and contributors Group Technology and Cellular Manufacturing addresses the needs and interests of three groups of individuals in the manufacturing field academic researchers industry practitioners and students 1 The book provides an up to date perspective incorporating the advances made in GT CM during the past 15 years As a natural extension to this research it synthesizes the latest industry practices and outcomes to guide research to greater real world relevance 2 The book makes clear the foundations of GT CM from the core elements of new developments which are aimed at reducing developmental and

Surprisingly the reason for them being replaced is the same research of the routine was misleading regardless of its ingenuity In the fourth case CAD does not support CAPP Computer Aided Process Planning and thus Numerical Control could no longer support developments of a system such as a flexible and automated factory However they incorporate many features in a specific resource instead within a manufacturing system CAD technology and machining centers remain remarkable as a specific unique manufacturing resource This work proposes ways to revive these innovations for the future Innovation is a driver for the development of new products and production methods It should be an integral part of a system and not pursued for its own sake This volume shows explains and remedies this by treating these interesting examples
