## Unit 5: Team Problem Solving Activity - Unit 5 Group 3

3 10

From C158622

### Introduction

A fluent professional in this field can easily recognize concepts across different coding languages. The python pandas library works a lot like SQL, which you are building a proficiency in. For this activity, you will practice your SQL and then research why someone might used python over SQL for a similar task.

### Directions

1. As a group build the code below in SQL:
  1. Create two new tables that are related with a primary and foreign key.
  2. Add data to both tables.
  3. Join the two tables.
  4. Two additional actions of your groups choosing.
2. You can do the task above in python as well. Research why you would chose python over SQL. What advantages does python provide that SQL does not?

Each team is randomly assigned a leader. The leader is responsible for compiling the final post with help from the team (aka, don't leave the leader to do all the work. How you divide the work is up to your team). If a leader is failing to perform their duties, please work amongst yourself to appoint a new leader.

### Due Dates
