Growing Explanations Historical Perspectives On Recent Science:

Growing Explanations M. N. Wise,2003 Growing Explanations M. Norton Wise,2004-11-24 This collection addresses a post WWII shift in the hierarchy of scientific explanations where the highest goal moves from reductionism towards some understanding of how elementary objects get built up or grown up into complex objects whose

Positioning the History of Science Kostas Gavroglu,Jürgen Renn,2007-05-05 The present volume compiled in honor of an outstanding historian of science physicist and exceptional human being Sam Schweber is unique in assembling a broad spectrum of positions on the history of science by some of its leading representatives Readers will find it illuminating to learn how prominent authors judge the current status and the future perspectives of their field Students will find this volume helpful as a guide in a fragmented field that continues to be dominated by idiosyncratic expertise and that still lacks a methodical canon The essays were written in response to our invitation to explicate the views of the authors concerning the state of the history of science today and the issues we felt are related to its future Although not all the scholars invited to write have contributed an essay this volume can nevertheless be considered as a rather comprehensive survey of the present state of the history of science All the papers collected here reflect in one way or another the strong influence Sam Schweber exerted during the past decades in his gentle way on the history of science as well as on the lives of many of its protagonists worldwide All who have had the opportunity of encountering him have benefited from his advice benevolence and friendship Sam Schweber's intellectual taste his passion for knowledge and his erudition are all encompassing It therefore seemed fitting to honor him with a collection of essays of comparable breadth nothing less would suffice Chaos and Fractals

David P. Feldman,2012-08-09 For students with a background in elementary algebra this book provides a vivid introduction to the key phenomena and ideas of chaos and fractals including the butterfly effect strange attractors fractal dimensions Julia Sets and the Mandelbrot Set power laws and cellular automata The book includes over 200 end of chapter exercises *The Philosophical Foundations of Ecological Civilization* Arran Gare,2016-08-05 The global ecological crisis is the greatest challenge humanity has ever had to confront and humanity is failing The triumph of the neo liberal agenda together with a debauched scientism has reduced nature and people to nothing but raw materials instruments and consumers to be efficiently managed in a global market dominated by corporate managers media moguls and technocrats The arts and the humanities have been devalued genuine science has been crippled and the quest for autonomy and democracy undermined The resultant trajectory towards global ecological destruction appears inexorable and neither governments nor environmental movements have significantly altered this or indeed seem able to *The Philosophical Foundations of Ecological Civilization* is a wide ranging and scholarly analysis of this failure This book reframes the dynamics of the debate beyond the discourses of economics politics and techno science Reviving natural philosophy to align science with the humanities it offers the categories required to reform our modes of existence and our institutions so that we augment rather than undermine the

life of the ecosystems of which we are part From this philosophical foundation the author puts forth a manifesto for transforming our culture into one which could provide an effective global environmental movement and provide the foundations for a global ecological civilization

Trading Zones and Interactional Expertise Michael E. Gorman,2010 A proposal for a new framework for fostering collaborations across disciplines addressing both theory and practical applications Cross disciplinary collaboration increasingly characterizes today s science and engineering research The problems and opportunities facing society do not come neatly sorted by discipline Difficulties arise when researchers from disciplines as different as engineering and the humanities work together and find that they speak largely different languages This book explores a new framework for fostering collaborations among existing disciplines and expertise communities The framework unites two ideas to emerge from recent work in STS trading zones in which scientific subcultures each with its own language develop the equivalents of pidgin and creole and interactional expertise in which experts learn to use the language of another research community in ways that are indistinguishable from expert practitioners of that community A trading zone can gradually become a new area of expertise facilitated by interactional expertise and involving negotiations over boundary objects objects represented in different ways by different participants The volume describes applications of the framework to service science business strategy environmental management education and practical ethics One detailed case study focuses on attempts to create trading zones that would help prevent marine bycatch another investigates trading zones formed to market the female condom to women in Africa another describes how humanists embedded in a nanotechnology laboratory gained interactional expertise resulting in improved research results for both humanists and nanoscientists Contributors Brad Allenby Donna T Chen Harry Collins Robert Evans Erik Fisher Peter Galison Michael E Gorman Lynn Isabella Lekelia D Jenkins Mary Ann Leeper Roop L Mahajan Matthew M Mehalik Ann E Mills Bolko von Oetinger Elizabeth Powell Mary V Rorty Jeff Shrager Jim Spohrer Patricia H Werhane

The Topological Imagination Angus Fletcher,2016-04-04 In a bold and boundary defining work Angus

Fletcher clears a space for an intellectual encounter with the shape of human imagining. Joining literature and topology, a branch of mathematics, he maps the ways the imagination's contours are formed by the spherical earth's patterns and cycles and shows how the world we inhabit also inhabits us. The Observation of Human Systems Joshua W. Clegg, 2017-12-02

Contemporary mainstream psychology has moved toward methodological specificity bounded by instrumental experimentalism. However, this institutional reduction of sanctioned methods has not been fully embraced by all social scientists, nor even by all experimental psychologists. The social sciences are rife with examples of practicing empirical scientists disaffected with the reductionism and atomism of traditional experimentalism. The empirical theory and practice of four of these disaffected social scientists—Lev Vygotsky, James Baldwin, James Gibson, and Kurt Lewin—is explored in this volume. Each of the scientists considered here argued for a rigorously empirical method while still maintaining a clear anti-reductionist stance. They justified their disaffection with the dominant psychological paradigms of their respective eras in terms of a fidelity to their phenomena of study, a fidelity they believed would be compromised by radical reductionism and ontological atomism. The authors in this collection explore the theory and practice of these eminent researchers and from it find inspiration for contemporary social science. The primary argument running through these analyses is that the social sciences should take seriously the notion of holistic empirical investigation. This means, among other things, re-establishing the indissoluble ties between theory, method, and procedure and resisting the manualization of research procedures. It also means developing theories of relations and not simply of elemental properties. Such theories would concern particular units, fields, or systems of relations and not be reduced to or interpreted in the terms of other systems. Finally, a holistic social science requires integration of the active agent into theory, method, and procedure—an integration that points toward both participatory and emancipatory methods.

The Constitution of Algorithms Florian Jaton, 2021-04-27 A laboratory study that investigates how algorithms come into existence. Algorithms, often associated with the terms big data, machine learning, or artificial intelligence, underlie the technologies we use every day, and disputes over the consequences, actual or potential, of new algorithms arise regularly. In this book, Florian Jaton offers a new way to study computerized methods, providing an account of where algorithms come from and how they are constituted, investigating the practical activities by which algorithms are progressively assembled rather than what they may suggest or require once they are assembled.

Evidence-Based Policy Nancy Cartwright, Jeremy Hardie, 2012-09-20 Over the last twenty or so years, it has become standard to require policy makers to base their recommendations on evidence. That is now uncontroversial to the point of triviality; of course, policy should be based on the facts. But are the methods that policy makers rely on to gather and analyze evidence the right ones? In *Evidence-Based Policy*, Nancy Cartwright, an eminent scholar, and Jeremy Hardie, who has had a long and successful career in both business and the economy, explain that the dominant methods, which are in use now—broadly speaking, methods that imitate standard practices in medicine like randomized control trials—do not work. They fail.

Cartwright and Hardie contend because they do not enhance our ability to predict if policies will be effective The prevailing methods fall short not just because social science which operates within the domain of real world politics and deals with people differs so much from the natural science milieu of the lab Rather there are principled reasons why the advice for crafting and implementing policy now on offer will lead to bad results Current guides in use tend to rank scientific methods according to the degree of trustworthiness of the evidence they produce That is valuable in certain respects but such approaches offer little advice about how to think about putting such evidence to use Evidence Based Policy focuses on showing policymakers how to effectively use evidence It also explains what types of information are most necessary for making reliable policy and offers lessons on how to organize that information

The Demonstration Society Claude Rosental,2021-10-12 Today as in the past public demonstrations are not only tools to prove persuade and promote but also fundamental forms of social interaction and exchange YouTube demos of makeup products by famous influencers demonstrations of strength during street protests demonstrations of military might in North Korea public demonstrations are omnipresent in social life Yet they are often perceived as isolated events unworthy of systematic examination In The Demonstration Society Claude Rosental explores the underlying dynamics of what he calls a demonstration society He shows how both in today s world and historically public demonstrations constitute not only tools to prove persuade and promote but fundamental forms of interaction and exchange and in some cases attempts to lead the world Rosental compares demos with other forms of public demonstrations drawing out both their peculiarities and common features He analyzes the processes through which demonstrations are conceived and carried out as well as the skills of their producers He also compares contemporary demos with historical demonstrations including theaters of machines in the Renaissance public demonstrations of natural philosophy in the seventeenth century and demonstrations of the magic lantern in the nineteenth century Above and beyond the entertainment they sometimes provide demonstrations are experienced as intense moments that broadly involve alliances material and symbolic goods and more generally the future of individuals and collectives Rosental elucidates the many ways in which we live today as in the past in a society of demonstration

Frontiers in Computational Chemistry: Volume 2 Zaheer Ul-Haq,Jeffrey D. Madura,2015-12-16 Frontiers in Computational Chemistry originally published by Bentham and now distributed by Elsevier presents the latest research findings and methods in the diverse field of computational chemistry focusing on molecular modeling techniques used in drug discovery and the drug development process This includes computer aided molecular design drug discovery and development lead generation lead optimization database management computer and molecular graphics and the development of new computational methods or efficient algorithms for the simulation of chemical phenomena including analyses of biological activity In Volume 2 the authors continue the compendium with nine additional perspectives in the application of computational methods towards drug design This volume covers an array of subjects from modern hardware advances that accelerate new antibacterial peptide

identification electronic structure methods that explain how singlet oxygen damages DNA to QSAR model validation the application of DFT and DFRT methods on understanding the action of nitrogen mustards the design of novel prodrugs using molecular mechanics and molecular orbital methods computational simulations of lipid bilayers high throughput screening methods and more Brings together a wide range of research into a single collection to help researchers keep up with new methods Uniquely focuses on computational chemistry approaches that can accelerate drug design Makes a solid connection between experiment and computation and the novel application of computational methods in the fields of biology chemistry biochemistry physics and biophysics

Becoming Beside Ourselves Brian Rotman, 2008-07-16 Theoretical study of the relationship between technoscience and the human body that examines the ways in which bodies and machines speak not just through language but also through gesture numbers and other non alphabetic systems of expressio *The Philosophy of Chemistry* Jean-Pierre Llored, 2014-09-26 This volume connects chemistry and philosophy in order to face questions raised by chemistry in our present world The idea is first to develop a kind of philosophy of chemistry which is deeply rooted in the exploration of chemical activities We thus work in close contact with chemists technicians engineers researchers and teachers Following this line of reasoning the first part of the book encourages current chemists to describe their workaday practices while insisting on the importance of attending to methodological metrological philosophical and epistemological questions related to their activities It deals with sustainable chemistry chemical metrology nanochemistry and biochemistry among other crucial topics In doing so those chemists invite historians and philosophers to provide ideas for future developments In a nutshell this part is a call for forthcoming collaborations focused on instruments and methods that is on ways of doing chemistry The second part of the book illustrates the multifarious ways to study chemistry and even proposes new approaches to doing so Each approach is interesting and incomplete but the emergent whole is richer than any of its components Analytical work needs socio historical expertise as well as many other approaches in order to keep on investigating chemistry to greater and greater depth This heterogeneity provides a wide set of methodological perspectives not only about current chemical practices but also about the ways to explore them philosophically Each approach is a resource to study chemistry and to reflect upon what doing philosophy of science can mean In the last part of the volume philosophers and chemists propose new concepts or reshape older ones in order to think about chemistry The act of conceptualization itself is queried as well as the relationships between concepts and chemical activities Prefaced by Nobel Laureate in Chemistry Roald Hoffmann and by the President of the International Society for the Philosophy of Chemistry Rom Harr this volume is a plea for the emergence of a collective cleverness and aims to foster inventiveness

Moments of Valuation Ariane Berthoin Antal, Michael Hutter, David Stark, 2015-01-29 The outcome of innovation processes are determined by complex historically grown valuation practices In this book a wide range of innovations are taken into consideration from small inventions like entertainment novelties to large societal changes through new technologies The chapters observe the

particular local or distributed sites in which their episodes of innovation take place and they identify the initial dissonance among those judging a newly proposed alternative The emphasis of the inquiry however is on the practices of valuation that are at work when something succeeds in being new The authors represent a wide variety of sub disciplines and national backgrounds in the social sciences They share an interest in social valuation and a pragmatist approach The differences between their empirical evidence reflect the wide variety of appearances that valuation takes in contemporary society They are anthropologists economic or cultural sociologists organization researchers historians or political scientists A number of chapters deals with aesthetic valuation as in the tasting of a new vintage or in the socio technical process that shaped successful synthesizer sounds Other chapters discuss the judgment processes in organizations like architect offices or consultancy firms and processes of evaluation and valorization in larger fields of practice like accounting or mathematics The studies are both of interest in their various professional fields and contribute to a more general understanding of the social and cultural conditions under which innovations fail and succeed

Androids in the Enlightenment Adelheid Voskuhl, 2013

In this volume Adelheid Voskuhl investigates two automata both depicting piano playing women These automata not only play music but also move their heads eyes and torsos to mimic a sentimental body technique of the 18th century musicians were expected to generate sentiments in themselves while playing then communicate them to the audience through bodily motions

Natural Causes Barbara Ehrenreich, 2018-04-10

From the celebrated author of *Nickel and Dimed* Barbara Ehrenreich explores how we are killing ourselves to live longer not better A razor sharp polemic which offers an entirely new understanding of our bodies ourselves and our place in the universe *Natural Causes* describes how we over prepare and worry way too much about what is inevitable One by one Ehrenreich topples the shibboleths that guide our attempts to live a long healthy life from the importance of preventive medical screenings to the concepts of wellness and mindfulness from dietary fads to fitness culture But *Natural Causes* goes deeper into the fundamental unreliability of our bodies and even our mind bodies to use the fashionable term Starting with the mysterious and seldom acknowledged tendency of our own immune cells to promote deadly cancers Ehrenreich looks into the cellular basis of aging and shows how little control we actually have over it We tend to believe we have agency over our bodies our minds and even over the manner of our deaths But the latest science shows that the microscopic subunits of our bodies make their own decisions and not always in our favor We may buy expensive anti aging products or cosmetic surgery get preventive screenings and eat more kale or throw ourselves into meditation and spirituality But all these things offer only the illusion of control How to live well even joyously while accepting our mortality that is the vitally important philosophical challenge of this book Drawing on varied sources from personal experience and sociological trends to pop culture and current scientific literature *Natural Causes* examines the ways in which we obsess over death our bodies and our health Both funny and caustic Ehrenreich then tackles the seemingly unsolvable problem of how we might better prepare ourselves for the end while still reveling in the lives that remain to us

A Brief History of String Theory Dean Rickles, 2014-02-18 During its forty year lifespan string theory has always had the power to divide being called both a theory of everything and a theory of nothing Critics have even questioned whether it qualifies as a scientific theory at all This book adopts an objective stance standing back from the question of the truth or falsity of string theory and instead focusing on how it came to be and how it came to occupy its present position in physics An unexpectedly rich history is revealed with deep connections to our most well established physical theories Fully self contained and written in a lively fashion the book will appeal to a wide variety of readers from novice to specialist

Pragmatic Inquiry John R. Bowen, Nicolas Dodier, Jan Willem Duyvendak, Anita Hardon, 2020-10-08 This book examines a range of critical concepts that are central to a shift in the social sciences toward pragmatic inquiry reflecting a twenty first century concern with particular problems and themes rather than grand theory Taking a transnational and transdisciplinary approach the collection demonstrates a shared commitment to using analytical concepts for empirical exploration and a general orientation to research that favors an attention to objects techniques and practices The chapters draw from broad based and far reaching social theory in order to analyze new specific challenges from grasping the everyday workings of markets courtrooms and clinics to inscribing the transformations of practice within research disciplines themselves Each contributor takes a key concept and then explores its genealogies and its circulations across scholarly communities as well as its proven payoffs for the social sciences and often critical reflections on its present and future uses This carefully crafted volume will significantly expand and improve the analytical repertoires or toolkits available to social scientists including scholars in sociology or anthropology and those working in science and technology studies public health and related fields
