*Growth in Mathematics, Green*, 1978 Designed as a non graded program but corresponds to book three in a traditional program     Professional Development of Mathematics Teachers Berinderjeet Kaur, Oh Nam Kwon, Yew Hoong Leong, 2016-11-14 This book offers a counterpart to the extensive corpus of literature available on the same topic from a Western perspective It showcases innovative approaches to professional development of mathematics teachers in Asian countries and reports on both empirical and expository studies of teachers professional development in these countries It provides scholars from non English speaking and under represented Asian countries the opportunity to engage in discourse with other scholars in the field and is the first book to present substantial contributions from scholars in Asia on the professional development of mathematics teachers in their respective countries It includes perspectives that shed valuable light on how the approaches pursued in Asian countries resemble or differ from those in the West     Hidden Dimensions in the Professional Development of Mathematics Teachers: In-Service Education for and With Teachers B. Roesken, 2011-07-23 Professional development is often determined by black and white thinking Either issues are considered as being good or bad or statements like teachers should or teachers must are transported However it is easily forgotten from which perspective the judgment is taken surely it is not the teacher s one Profoundly respecting and cherishing the teachers and their needs allows for arriving at a vision of professional development that is for and with teachers instead being simply about them This book presents the field of mathematics teacher professional development both from a theoretical and an empirical perspective In particular the initiative Mathematics Done Differently that has been run in Germany is presented in whose context the data of the empirical study was gathered The empirical findings led to postulating a model describing teachers individual growth pathways and to providing implications for constructing practices that are based on what teachers really need     **The Learning and Development of Mathematics Teacher Educators** Merrilyn Goos, Kim Beswick, 2021-04-07 Research in mathematics teacher education as a distinctive field of inquiry has grown substantially over the past 10 15 years Within this field there is emerging interest in how mathematics teacher educators MTEs themselves learn and develop Until recently there were few published studies on this topic and the processes by which mathematics teacher educators learn and the forms of knowledge they require for effective practice had not been systematically investigated However researchers in mathematics education are now beginning to investigate the development of MTE expertise and associated issues This volume draws on the latest research and thinking in this area is therefore timely to stimulate future development and directions It will survey the emerging field of inquiry in mathematics education combining the work of established scholars with perspectives of newcomers to the field with the aim of influencing development of the field invite cross cultural comparisons in becoming a mathematics teacher educator by highlighting issues in the development of MTEs in different countries and examine the roles of both mathematics educators and mathematicians in preparing future teachers of

mathematics The primary audience will be university based mathematics teacher educators and MTE researchers and postgraduate research students who are seeking academic careers as MTEs Additional interest may come from teacher educators in disciplines other than mathematics and education policy makers responsible for accreditation and quality control of initial teacher education programs

extension their students to chart their own course and author their own equitable and joyful mathematical and professional stories

**Teachers' Professional Development and the Elementary Mathematics Classroom** Sophia

Cohen, 2004-07-13 This book illustrates the experiences of elementary school teachers across one year's time as they participated in a teacher development seminar focused on mathematics and as a result changed their beliefs, their knowledge, and their practices. It explores these experiences as a means of understanding the learning that takes a teacher from a more traditional teaching practice to one that is focused on the ideas and understandings that students and teachers have of the subject matter. The work emerges from and reports on a unique data set from a two-year study of teacher learning that was funded by the Spencer and MacArthur foundations. The teachers whose work is at the center of this study were participants in the Developing Mathematical Ideas seminar (DMI), a mathematics teacher development seminar for elementary school teachers. This seminar is one example of intensive domain-specific professional development. In this seminar, teachers study elementary mathematics content to deepen their own understanding of it; they study the development among children of the ideas central to elementary mathematics and they experience a teaching and learning environment consistent with the pedagogy envisioned by the National Council for Teachers of Mathematics Principles and Standards for School Mathematics. The seminar is a nationally available teacher development curriculum; thus, interested educators can gain access to the resources necessary to offer similar seminars in their own communities. **Teachers' Professional Development and the Elementary Mathematics Classroom: Bringing Understandings to Light** will be widely interesting to a broad audience, including mathematics teacher educators, teacher education researchers, policymakers, and classroom teachers. It will serve well as a text in a range of graduate courses dealing with teacher cognition, knowledge for teaching mathematics, methods, psychology of learning, and pedagogical theory.
