Language of Instruction and Cognitive Development Anja Langer, 2013 Malawi's recent education statistics show that a high percentage of pupils do not achieve their study goals and subsequently drop out of school This study examines the underlying reasons yet the main focus rests on the language of instruction Learners in three different language areas in Malawi participated in a picture based test to find out whether the development of problem oriented logical thinking is influenced by the instruction in the mother tongue in early primary school Answers are offered with the help of tests and observations during the tests as well as interviews with teachers parents and decision makers Series Beitrage zur Afrikanistik Contributions to African Vol 21

Cognitive Development in Psychology Prof. Dr. Bilal Semih Bozdemir, The philosophical foundations of cognitive development can be traced back to ancient Greece where figures like Plato and Aristotle pondered the nature of knowledge and learning Plato proposed that knowledge is inherently linked to the world of forms suggesting that understanding is an innate quality discovered through recollection In contrast Aristotle emphasized empirical observation and inductive reasoning positing that knowledge is acquired through experience Such dichotomies set the stage for subsequent theories of cognitive development where the juxtaposition of innate traits versus experiential learning remained a dominant discourse During the Enlightenment intellectual shifts further complicated understanding of cognition John Locke's tabula rasa concept suggested that the mind begins as a blank slate thus emphasizing environmental influences on learning In stark contrast Ren Descartes rationalism introduced the idea that certain truths are inherent and accessible through reason alone These contrasting perspectives on the origin of knowledge significantly influenced later developmental theorists shaping their research questions and methodological approaches The 19th century marked a critical shift toward empirical investigation of cognitive development The advent of psychology as a formal discipline expanded the exploration of human cognition Pioneers such as Ernst Weber and Gustav Fechner examined the relationship between physical stimuli and perception enriching the understanding of how cognitive processes operate Additionally the work of Wilhelm Wundt laid the groundwork for experimental psychology highlighting the importance of controlled environments in the study of cognition By the late 19th century the scientific community began to focus on developmental psychology recognizing the importance of understanding cognitive processes
