Weapons of War:
Environmental Impact, 2013-08-15 The Indian Air Force from a humble beginning in 1932 with 4 Wapiti aircraft six Indian officers and 22 hawai sepoys have traversed a long journey of eighty one years and crossed noteworthy milestones to become the fourth largest air force in the world While facing several limitations challenges IAF have met all the national defence requirements and made several strategic contributions With growing economic interests and national aspirations expanding interests well beyond our territorial boundaries and prevailing internal security challenges India s national defence requirements are also increasing The first Gulf War was a monumental turning point in the war time employment of aerospace power Ever since significance of aerospace power in war crisis and peace time has been gaining ascendancy Kosovo and Libya are the two pertinent examples of the allies virtually relying on aerospace power without committing any soldiers on the ground Scrutiny of the emerging global and national trends suggests that employment of the aerospace assets as well as nation s expectation from the IAF will continue to rise Alongside there is an unplanned fall in flying platforms weapon systems and pilot strength of the IAF This study is an attempt to analyse the history of the IAF in war as well as other than war operations to appreciate the emerging trends in geopolitics aerospace technology and doctrine and to identify the likely challenges IAF would be facing in the next two decades and beyond Road map for transformation of the national security framework indigenous aerospace industry and the IAF has also been suggested

Military Weapons and Environment Wing Commander (Dr) Umesh Chandra Jha, 2017-10-15 Armed conflicts have become more complicated with the emphasis shifting towards new weapons such as drones cybercrime and autonomous weapons In July 2017 the UN General Assembly adopted the Treaty on the Prohibition of Nuclear Weapons This treaty prohibits a full range of nuclear weapon related activities such as undertaking to develop test produce manufacture acquire possess or stockpile nuclear weapons or other nuclear explosive devices as well as the use or threat of use of these weapons The ongoing conflicts have shown that the consequences of the use of explosive weapons are not limited to death physical injury and disability but also include long term impacts on mental well being The use of improvised weapons by States and non State actors is an area of concern for the environment Every State must therefore ensure that weapons used by their armed forces are explicitly adjudged under International Humanitarian Law IHL and Human Rights Law While reviewing a new weapon the States must adopt multilateral approaches drawing upon relevant legal health environmental and military expertise This book describes the environmental effects of eight weapons and explosive remnants of war that have caused extensive environmental harm in the recent past It also makes specific recommendations addressed to the international community and the States for protecting the natural environment from the impact of weapons of war This book will contribute towards a better

understanding of the environmental harm caused by military weapons Environmental Law of Armed Conflict Nada Al-Duaij, 2021-10-25 This timely study examines how the environmental impact of modern warfare violates fundamental principles of international environmental and humanitarian laws and why these consideration need to be included in rules of armed conflict If direct attacks on innocent civilians are universally recognized as unacceptable then environmental devastation of their habitat by acts of war must also be recognized as an unacceptable consequence of armed conflict The author presents the case that the international community understand its responsibility to curb environmental consequences of modern weaponry and incorporate environmental concerns into the conventions regulating armed conflict Published under the Transnational Publishers imprint **Armed Conflict and Environmental Damage** Dr. U C Jha, 2014-08-01 Armed conflict and military activities have serious adverse impacts on the environment Modern weaponry troop movements landmines hazardous military waste and the destruction of forests for military use are a few sources of harm to the environment both during armed conflict and peacetime military activities Ecological assaults in combat areas are often kept a secret by the government resulting in even greater humanitarian and environmental harm Environmental degradation is increasingly being recognized as one of the most significant challenges of the 21st century and its effects are being felt worldwide Both domestic and international legislations have been inadequate in mitigating the impact of military activities This book provides details of the environmental destruction wreaked during international and non international armed conflicts and argues that the existing legal regime for the protection of the environment during armed conflict requires substantial modification It puts forward the view that though it is inconceivable to impose an absolute ban on environmental damage during military operations strengthening and clarifying the existing laws protecting the environment in times of conflict and enforcing environment friendly practices among military forces could go a long way in protecting natural assets of our earth *Security and the Environment* Rita Floyd, 2010-05-06 In 1993 the first Clinton administration declared environmental security a national security issue but by the end of the Bush administrations environmental security had vanished from the government s agenda This book uses changing US environmental security policy to propose a revised securitisation theory one that both allows insights into the intentions of key actors and enables moral evaluations in the environmental sector of security Security and the Environment brings together the subject of environmental security and the Copenhagen School s securitisation theory Drawing on original interviews with former key players in United States environmental security Rita Floyd makes a significant and original contribution to environmental security studies and security studies more generally This book will be of interest to international relations scholars and political practitioners concerned with security as well as students of international environmental politics and US policy making Environmental Histories of the Cold War J. R. McNeill, Corinna R. Unger, German Historical Institute (Washington, D.C.), 2010-04-30 Explores the links between the Cold War and the global environment ranging from the environmental impacts of nuclear weapons to

the political repercussions of environmentalism **Routledge Handbook of Environmental Security** Richard A. Matthew, Evgenia Nizkorodov, Crystal Murphy, 2021-12-21 The Routledge Handbook on Environmental Security provides a comprehensive accessible and sophisticated overview of the field of environmental security The volume outlines the defining theories major policy and programming interventions and applied research surrounding the relationship between the natural environment and human and national security Through the use of large scale research and ground level case analyses from across the globe it details how environmental factors affect human security and contribute to the onset and continuation of violent conflict It also examines the effects of violent conflict on the social and natural environment and the importance of environmental factors in conflict resolution and peacebuilding Organized around the conflict cycle the handbook is split into four thematic sections Section I Environmental factors contributing to conflict Section II The environment during conflict Section III The role of the environment in post conflict peacebuilding and Section IV Cross cutting themes and critical perspectives This handbook will be essential reading for students of environmental studies human security global governance development studies and international relations in general *Warfare Ecology* Gary E. Machlis, Thor Hanson, Zdravko Špirić, Jean E. McKendry, 2011-06-06 The purpose of this book is specific and ambitious to outline the distinctive elements scope and usefulness of a new and emerging field of applied ecology named warfare ecology Based on a NATO Advanced Research Workshop held on the island of Vieques Puerto Rico the book provides both a theoretical overview of this new field and case studies that range from mercury contamination during World War I in Slovenia to the ecosystem impacts of the Palestinian occupation and from the bombing of coral reefs of Vieques to biodiversity loss due to violent conflicts in Africa Warfare Ecology also includes reprints of several classical papers that set the stage for the new synthesis described by the authors Written for environmental scientists military and humanitarian relief professionals conservation managers and graduate students in a wide range of fields Warfare Ecology is a major step forward in understanding the relationship between war and ecological systems Arms Control and the Environment Lakshman Guruswamy, Suzette Grillot, 2021-10-01 Arms and the Environment is the first book to systematically address the conceptual gap between international arms control norms and informed awareness of environmental perils It presents searching analyses and solutions from active professionals in a variety of related fields including international peacekeeping and defense procurement as well as representatives of concerned non governmental organizations and distinguished academics in the natural sciences law and political science Published under the Transnational Publishers imprint **The Use of Nuclear Weapons and the Protection of the Environment during International Armed Conflict** Erik V Koppe, 2008-04-25 In 1996 the International Court of Justice delivered an Advisory Opinion on the legality of the use of nuclear weapons in which the Court stated that while the existing international law relating to the protection and safeguarding of the environment does not specifically prohibit the use of nuclear weapons it indicates important environmental factors that are properly to be taken

into account in the context of the implementation of the principles and rules of the law applicable in armed conflict The present work analyses this conclusion focusing on the question whether or not the use of nuclear weapons during international armed conflict would violate existing norms of public international law relating to the protection and safeguarding of the environment Although the use of weaponry during armed conflict is usually related to the protection of individuals the rapidly emerging appreciation of and the worldwide realization of the intrinsic value of the natural environment as an indispensable asset for the continuation of life including human life on this planet both for present and future generations warrants a thorough and extensive examination of the question of the illegality of the employment of nuclear weapons from the point of view of international environmental protection law The book consists of two parts Part I discusses the historical development and the effects of nuclear weapons Part II discusses the protection of the environment during international armed conflict under *ius in bello* *ius ad bellum* and *ius pacis* Only then is it possible to assess the legality of the use of nuclear weapons under this particular set of rules

El-Kholy,2012-12-06 Our planet is under siege Assaults on the atmosphere the greenhouse effect the depletion of the ozone layer and increasing air pollution pose a still unquantified threat to human life The dumping of hazardous wastes and land based sources of pollution present a similar threat to the oceans On land we are destroying a tropical forest the size of Austria every year and more than a hundred species of wild plants and animals are lost forever each day When the General Assembly of the United Nations established UNEP it charged us with reporting on the changing state of the world's environment tracking the underlying causes of change and working with governments to develop responses to those changes Every year since 1974 UNEP has produced a State of the Environment report focusing on one or more emerging environmental issues and always stressing the human factor the impact of environmental quality on people and society Three times since its inception 1982 1987 and 1992 UNEP has undertaken a more wide ranging study The results of the present study are the most disturbing of the three However not all the signs are negative Throughout the 1970s and into the 1980s UNEP was able to report progress in some important areas Environmental monitoring capacity was being rapidly improved in many parts of the world and Ministries of the Environment were being set up in an attempt to deal with environmental threats in a more coherent way **Environmental Consequences of International Conflicts** Aleksander V.
