Understanding Reproduction Giuseppe Fusco,Alessandro Minelli,2023-08-10 Our understanding of reproduction and reproductive processes is often biased towards the behaviour of organisms most familiar to us As such the amazing disparity of the phenomena of reproduction and sex is often overlooked Understanding Reproduction addresses all the main facets of this large chapter of the life sciences including discussions of asexual reproduction parthenogenesis sex determination reproductive effort and much more The book features an abundance of examples from across the tree of life including animals plants fungi protists and bacteria Written in an accessible and easy to digest style overcoming the intimidating diversity of the technical terminology this book will appeal to interested general readers biologists science educators philosophers and medical doctors *Environmental Biotechnology* Lawrence K. Wang,Volodymyr Ivanov,Joo-Hwa Tay,Yung-Tse Hung,2010-04-05 The past 30 years have seen the emergence of a growing desire worldwide that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Since pollution is a direct or indirect consequence of waste production the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken
