## **Economics Of Automatic Testing:**

Economics of Electronic Design, Manufacture and Test M. Abadir, T. Ambler, 2013-06-29 The general understanding of design is that it should lead to a manufacturable product Neither the design nor the process of manufacturing is perfect As a result the product will be faulty will require testing and fixing Where does economics enter this scenario Consider the cost of testing and fixing the product If a manufactured product is grossly faulty or too many of the products are faulty the cost of testing and fixing will be high Suppose we do not like that We then ask what is the cause of the faulty product There must be something wrong in the manufacturing process We trace this cause and fix it Suppose we fix all possible causes and have no defective products We would have eliminated the need for testing Unfortunately things are not so perfect There is a cost involved with finding and eliminating the causes of faults We thus have two costs the cost of testing and fixing we will call it cost 1 and the cost of finding and eliminating causes of faults call it cost 2 Both costs in some way are included in the overall cost of the product If we try to eliminate cost 1 cost 2 goes up and vice versa An economic system of production will minimize the overall cost of the product Economics of Electronic Design Manufacture and Test is a collection of research contributions derived from the Second Workshop on Economics of Design Manufacture and Test written for inclusion in this book

**The Economics of Automatic Testing** Brendan Davis, 1994 This work is based upon the concept that the optimum strategy for electronics testing can only be established after a detailed economic analysis of the alternatives The first seven chapters deal with issues that have to be considered when making decisions about testing including the key roles of quality and time to market in today's industrial companies Chapter eight describes the analytical approaches that can be used to make these decisions while the remaining four chapters deal with the post decision activities such as the evaluation of commercial testers the financial justification and the presentation to senior management of the proposals
