Grothendieck Spaces In Approximation Theory Memoirs Of The American Mathematical Society:

Grothendieck Spaces in Approximation Theory Jörg Blatter, 1972 The purpose of this work is to study systematically a set of closed vector subspaces Grothendieck subspaces of $C_0(X)$ a locally compact Hausdorff topological space and X a real Banach space analogous to Grothendieck's set of closed vector subspaces of $C_0(T)$ along with two subsets Kakutani Stone and Weierstrass Stone subspaces analogous to the sets of closed vector sublattices and closed subalgebras of $C_0(T)$ and to develop subsequently a theory of best approximation in $C_0(X)$ by closed vector subspaces in these sets Author Grothendieck Spaces in Approximation Theory, 1972 In 1955 Alexander Grothendieck introduced the class of Banach spaces now called Grothendieck spaces These spaces are now known to play a substantial role in the classification theory of Banach spaces The purpose of this work is to study systematically a set of closed vector subspaces Grothendieck subspaces and to develop a theory of best approximation in these sets Memoirs of the American Mathematical Society American Mathematical Society, 1972 Functional Analysis, Holomorphy, and Approximation Theory Guido I. Zapata, 2020-12-22 This book contains papers on complex analysis function spaces harmonic analysis and operators presented at the International seminar on Functional Analysis Holomorphy and Approximation Theory held in 1979 It is addressed to mathematicians and advanced graduate students in mathematics Library of Congress Catalogs Library of Congress, 1976 Theory of Operator Spaces Edward G. Effros, Zhong-Jin Ruan, 2022-03-25 This book provides the main results and ideas in the theories of completely bounded maps operator spaces and operator algebras along with some of their main applications It requires only a basic background in functional analysis to read through the book The descriptions and discussions of the topics are self explained It is appropriate for graduate students new to the subject and the field The book starts with the basic representation theorems for abstract operator spaces and their mappings followed by a discussion of tensor products and the analogue of Grothendieck's approximation property Next the operator space analogues of the nuclear integral and absolutely summing mappings are discussed In what is perhaps the deepest part of the book the authors present the remarkable non classical phenomena that occur when one considers local reflexivity and exactness for operator spaces This is an area of great beauty and depth and it represents one of the triumphs of the subject In the final part of the book the authors consider applications to non commutative harmonic analysis and non self adjoint operator algebra theory Operator space theory provides a synthesis of Banach space theory with the non commuting variables of operator algebra theory and it has led to exciting new approaches in both disciplines This book is an indispensable introduction to the theory of operator spaces Mathematical Reviews, 2004 **Notices of the American Mathematical Society** American Mathematical Society, 1994 Catalog of Copyright Entries. Peloso, Fulvio Ricci, 2014-12-20 The authors consider the Hodge Laplacian Δ on the Heisenberg group H_n endowed with a left invariant and U_n invariant Riemannian metric For $0 \leq k \leq 2n-1$ let Δ_k denote the Hodge Laplacian restricted to k forms In this paper they address three main related questions 1 whether the L^2

Husein, Kay Magaard, 2015-02-06 Motivated by the maximal subgroup problem of the finite classical groups the authors begin the classification of imprimitive irreducible modules of finite quasisimple groups over algebraically closed fields K A module of a group G over K is imprimitive if it is induced from a module of a proper subgroup of G The authors obtain their strongest results when $\text{char } K = 0$ although much of their analysis carries over into positive characteristic If G is a finite quasisimple group of Lie type they prove that an imprimitive irreducible KG module is Harish Chandra induced This being true for $\text{rm char } K$ different from the defining characteristic of G the authors specialize to the case $\text{char } K = 0$ and apply Harish Chandra philosophy to classify irreducible Harish Chandra induced modules in terms of Harish Chandra series as well as in terms of Lusztig series The authors determine the asymptotic proportion of the irreducible imprimitive KG modules when G runs through a series groups of fixed twisted Lie type One of the surprising outcomes of their investigations is the fact that these proportions tend to 1 if the Lie rank of the groups tends to infinity For exceptional groups G of Lie type of small rank and for sporadic groups G the authors determine all irreducible imprimitive KG modules for arbitrary characteristic of K Homological Mirror Symmetry for the Quartic Surface Paul Seidel, 2015-06-26 The author proves Kontsevich's form of the mirror symmetry conjecture for on the symplectic geometry side a quartic surface in \mathbb{C}^3

Irreducible Almost Simple Subgroups of Classical Algebraic Groups Timothy C. Burness, Soumaia Ghandour, Claude Marion, Donna M. Testerman, 2015-06-26 Let G be a simple classical algebraic group over an algebraically closed field of characteristic p with natural module V Let H be a closed subgroup of G and let τ be a nontrivial restricted irreducible tensor indecomposable rational module such that the restriction of τ to H is irreducible In this paper the authors classify the triples of this form where H is a disconnected almost simple positive dimensional closed subgroup of G acting irreducibly on V Moreover by combining this result with earlier work they complete the classification of the irreducible triples where H is a simple algebraic group over p and H is a maximal closed subgroup of positive dimension

establishing a non Abelian version of the Calder n Vaillancourt Theorem In particular the authors give an oscillating kernel formula for WKB star products on symplectic symmetric spaces that fiber over an exponential Lie group
