Groundwater Flow And Contaminant Transport In Carbonate Aquifers:

Groundwater Flow and Contaminant Transport in Carbonate Aquifers Ira D. Sasowsky, Carol M. Wicks, 2000-01-01
Carbonate aquifers are an important source of water throughout the world. They are complicated systems and not always easy to interpret. Caves and channels form in the rock leading to complex flow pathways and unpredictable contaminant behaviour. This volume covers the range of techniques used to analyse groundwater flow and contaminant transport in carbonate aquifers. The book opens with a review of thoughts and methods and continues by discussing the use of tracers, hydrograph and hydrochemograph evaluation, estimation of aquifer properties from outcrop studies, numerical simulation, analogue simulation and 3 D visualization of conduits. Other papers address the critical evaluation of matrix fracture and conduit components of flow and storage. An understanding of these approaches is important to engineers or hydrogeologists working in carbonate aquifers. *Karst Groundwater Contamination and Public Health* William B. White, Janet S. Herman, Ellen K. Herman, Marian Rutigliano, 2017-09-06
This book sheds new light on contaminant transport in karst aquifers and the public health implications of contaminated karst groundwater. The papers included were presented at a conference held in early 2016 in San Juan, Puerto Rico and range from lengthy reviews on contaminant transport mechanisms to short articles summarizing research findings. The conference addressed a variety of topics such as contamination sources, the hydrogeology of contaminant transport, the storage and release of contaminants and the health impacts as well as the epidemiology of contaminated water supplies drawn from karst aquifers and gathered perspectives from experts in different disciplines including hydrogeologists and public health specialists. Although there is a wealth of literature on specific instances of karst groundwater contamination, this book offers an integrated conceptual framework for the public health impacts of karst groundwater, making it a valuable resource for a broad interdisciplinary readership. **Hydrogeology and Groundwater Modeling** Neven Kresic, 2006-10-26
Coupling the basics of hydrogeology with analytical and numerical modeling methods, *Hydrogeology and Groundwater Modeling*, Second Edition, provides detailed coverage of both theory and practice. Written by a leading hydrogeologist who has consulted for industry and environmental agencies and taught at major universities around the world, this unique **Methods in Karst Hydrogeology** Nico Goldscheider, David Drew, 2014-04-21
Filling a gap in the karst literature, this book describes methods most appropriate for use in karst terrains. These include methods that are basic to all hydrogeological studies such as hydraulic investigations, hydrochemistry, geophysics, isotope chemistry and modelling, with the emphasis placed on their application to karst systems. The various chapters of this book are written by experts in all the different methods. Most of the chapters are multi-authored and the authors include hydrogeologists who are experienced in evaluating a variety of karst environments and who together provide a balanced view of all the karst methods. *Geotechnical and Environmental Applications of Karst Geology and Hydrology* B.F. Beck, J.G. Herring, 2001-01-01
This text covers topics such as sinkhole formation and regional studies of sinkholes and karst. Issues

addressed are taken from the 8th multidisciplinary conference on this subject and chart the characteristics of sinkholes and karst as well as their environmental repercussions

The Handbook of Groundwater Engineering Jacques W. Delleur, 2006-11-16 A complete treatment of the theory and practice of groundwater engineering The Handbook of Groundwater Engineering Second Edition provides a current and detailed review of how to model the flow of water and the transport of contaminants both in the unsaturated and saturated zones covers the production of groundwater and the remediation of contaminated groundwater

Enhanced Characterization and Representation of Flow Through Karst Aquifers Scott L. Painter, Alexander Sun, Ronald T. Green, 2006 This research report summarizes and details the first year of work on a multi year karst modeling project organized to develop enhanced groundwater modeling capabilities that can be used to effectively manage karst aquifers Discussed are the three key considerations for modeling karst systems were identified representation of conduits in flow models representation of flow dynamics in conduits and representation of partially filled conduits and the numerical experiments used to identify the limitations and advantages of the three general representations of conduits within groundwater models A new dual conductivity MODFLOW 2000 package DCM was developed for testing the dual conductivity approach A turbulence model was added the software was validated using simple benchmark problems and code documentation was completed Simultaneous demonstrations showed that the modeling tool can be successfully applied in complex applications
