Groundwater Contamination Chester D. Rail, 2000-05-02 Fully updated and expanded into two volumes the new edition of Groundwater Contamination explains in a comprehensive way the sources for groundwater contamination the regulations governing it and the technologies for abating it This volume discusses aquifer management and strategies for stormwater control and groundwater restoration A number of case histories on site analysis and remediation based on DOE and state documents are included Among the many new features of this edition are a full discussion of risk assessment the preparation of groundwater protection plans and references linking the text to over 2 300 water related Web sites *Groundwater Contamination and Control* Uri Zoller, 1994-07-28 Explains the basic physical hydrological chemical and biochemical processes and mechanisms governing contaminants in the subsurface vadose zone gives case studies representing current techniques and presents research findings on and recommendations for solving groundwater contamination *Groundwater Contamination, Two Volume Set* Chester D. Rail, 2000-05-02 Fully updated and expanded into two volumes the new edition of Groundwater Contamination explains in a comprehensive way the sources for groundwater contamination the regulations governing it and the technologies for abating it Volume 1 covers all major contaminants and explains the hydrology and data used to determine the extent of pollution Volume 2 discusses aquifer management including technologies to control and stabilize multiple influxes into the water table This volume outlines strategies for stormwater control and groundwater restoration and presents numerous case histories of site analysis and remediation based on DOE and state documents Among the many new features of this edition are a full discussion of risk assessment the preparation of groundwater protection plans and references linking the text to over 2 300 water related Web sites **Groundwater Contamination, Volume II** Chester D. Rail, 2000-05-02 Fully updated and expanded into two volumes the new edition of Groundwater Contamination explains in a comprehensive way the sources for groundwater contamination the regulations governing it and the technologies for abating it This volume discusses aquifer management and strategies for stormwater control and groundwater restoration A number o Groundwater Contamination, Volume I Chester D. Rail, 2000-04-14 Fully updated and expanded into two volumes the new edition of Groundwater Contamination explains in a comprehensive way the sources for groundwater contamination the regulations governing it and the technologies for abating it Volume 1 covers all major contaminants and explains the hydrology and data used to determine the extent of pollution **Groundwater Contamination** Chester D. Rail, 1989 **Groundwater Contamination: Use of Models in Decision-Making** G. Jousma, Jacob Bear, Y.Y. Haines, F. Walter, 2012-12-06 The protection of groundwater resources has emerged in recent years as a high priority topic on the agenda of many countries In responding to the growing concern over deteriorating groundwater quality many countries are developing a comprehensive regulatory framework for the management of subsurface water resources with management referring to both quantity and quality aspects Within this framework groundwater models are rapidly coming to playa central

role in the development of protection and rehabilitation strategies These models provide forecasts of the future state of the groundwater aquifer systems and or the unsaturated zone in response to proposed management initiatives For example models will predict the effects of implementing a proposed management scheme on water levels and on the transport and fate of pollutants The models are now used in the formulation of policies and regulations the issuing of permits design of monitoring and data collection systems and the development of enforcement actions The growth in the use of these sophisticated tools has led to many unforeseen problems in groundwater management Linger issues include reliability of codes quality assurance in model development and applications efficient utilization of human and material resources technology transfer and training Some issues have legal ramifications as in cases where the applications of models have been contested in courts

*Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites* National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on Future Options for Management in the Nation's Subsurface Remediation Effort, 2013-02-27 Across the United States thousands of hazardous waste sites are contaminated with chemicals that prevent the underlying groundwater from meeting drinking water standards These include Superfund sites and other facilities that handle and dispose of hazardous waste active and inactive dry cleaners and leaking underground storage tanks many are at federal facilities such as military installations While many sites have been closed over the past 30 years through cleanup programs run by the U S Department of Defense the U S EPA and other state and federal agencies the remaining caseload is much more difficult to address because the nature of the contamination and subsurface conditions make it difficult to achieve drinking water standards in the affected groundwater

*Alternatives for Managing the Nation's Complex Contaminated Groundwater Sites* estimates that at least 126 000 sites across the U S still have contaminated groundwater and their closure is expected to cost at least 110 billion to 127 billion About 10 percent of these sites are considered complex meaning restoration is unlikely to be achieved in the next 50 to 100 years due to technological limitations At sites where contaminant concentrations have plateaued at levels above cleanup goals despite active efforts the report recommends evaluating whether the sites should transition to long term management where risks would be monitored and harmful exposures prevented but at reduced costs

**Risk Assessment for**

**Groundwater Pollution Control** William F. McTernan, Edward Kaplan, 1990-01-01 Prepared by the Groundwater Risk Assessment Task Committee for the Water Pollution Management Committee of the Environmental Engineering Division of ASCE This report discusses the control of contaminated groundwater and the use of risk assessment to mitigate this contamination The report explores such issues as defining the level of contamination determining which substances are contaminants and deciding the level of restoration needed These and other issues are discussed within the framework of risk assessment and risk management Critical components of risk assessment and risk management are described as are their strengths and weaknesses **Protecting the nation's groundwater from contamination.** , *Management Functions for Effective Controls of Groundwater Contamination* Jerry Y.
