Representation Theory of Finite Groups and Finite-Dimensional Algebras Michler,Ringel,2012-12-06 From April 1 1984 until March 31 1991 the Deutsche Forschungsgemeinschaft has sponsored the project Representation Theory of Finite Groups and Finite Di mensional Algebras The proposal for this project was submitted by B Huppert Mainz B Fischer Bielefeld G Michler Essen H Pahlings Aachen and C M Ringel Bielefeld in order to strengthen the interaction between the different re search areas in representation theory The Deutsche Forschungsgemeinschaft has given many research positions and fellowships for young algebraists enabling them to do research at their own uni versities or as visitors at well known research institutions in America Australia England and France The whole project benefitted very much from an extensive exchange programme between German and American scientists sponsored by the Deutsche Forschungsgemeinschaft and by the National Science Foundation of the United States This volume presents lectures given in a final conference and reports by members of the project It is divided into two parts The first part contains seven survey articles describing recent advances in different areas of representation theory These articles do not only concentrate on the work done by the German research

groups but also inform on major developments of the subject at all The volume omits those topics already treated in book form In particular it does not contain a survey on K **Representation Theory of Finite Groups** Ronald Solomon,2012-05-02 Thisseries is devoted to the publication of monographs lecture resp seminar notes and other materials arising from programs of the OSU Mathemaical Research Institute This includes proceedings of conferences or workshops held at the Institute and other mathematical writings **Representation Theory, Group Rings, and Coding Theory** M. Isaacs,1989 Dedicated to the memory of the Soviet mathematician S D Berman 1922 1987 this work covers topics including Berman s achievements in coding theory including his pioneering work on abelian codes and his results on the theory of threshold functions *Algorithmic and Experimental Methods in Algebra, Geometry, and Number Theory* Gebhard Böckle,Wolfram Decker,Gunter Malle,2018-03-22 This book presents state of the art research and survey articles that highlight work done within the Priority Program SPP 1489 Algorithmic and Experimental Methods in Algebra Geometry and Number Theory which was established and generously supported by the German Research Foundation DFG from 2010 to 2016 The goal of the program was to substantially advance algorithmic and experimental methods in the aforementioned disciplines to combine the different methods where necessary and to apply them to central questions in theory and practice Of particular concern was the further development of freely available open source computer algebra systems and their interaction in order to create powerful new computational tools that transcend the boundaries of the individual disciplines involved The book covers a broad range of topics addressing the design and theoretical foundations implementation and the successful application of algebraic algorithms in order to solve mathematical research problems It offers a valuable resource for all researchers from graduate students through established experts who are interested in the computational aspects of algebra geometry and or number theory Group Theory Mildred S. Dresselhaus,Gene Dresselhaus,Ado Jorio,2007-12-13 This concise class tested book was refined over the authors 30 years as instructors at MIT and the University Federal of Minas Gerais UFMG in Brazil The approach centers on the conviction that teaching group theory along with applications helps students to learn understand and use it for their own needs Thus the theoretical background is confined to introductory chapters Subsequent chapters develop new theory alongside applications so that students can retain new concepts build on concepts already learned and see interrelations between topics Essential problem sets between chapters aid retention of new material and consolidate material learned in previous chapters **Mathematical Reviews** ,2001 Hopf Algebras and Galois Module Theory Lindsay N. Childs,Cornelius Greither,Kevin P. Keating,Alan Koch,Timothy Kohl,Paul J. Truman,Robert G. Underwood,2021-11-10 Hopf algebras have been shown to play a natural role in studying questions of integral module structure in extensions of local or global fields This book surveys the state of the art in Hopf Galois theory and Hopf Galois module theory and can be viewed as a sequel to the first author s book Taming Wild Extensions Hopf Algebras and Local Galois Module Theory which was published in 2000 The book is divided into two parts Part I is more algebraic and focuses on

Hopf Galois structures on Galois field extensions as well as the connection between this topic and the theory of skew braces Part II is more number theoretical and studies the application of Hopf algebras to questions of integral module structure in extensions of local or global fields Graduate students and researchers with a general background in graduate level algebra algebraic number theory and some familiarity with Hopf algebras will appreciate the overview of the current state of this exciting area and the suggestions for numerous avenues for further research and investigation **Geometric and Topological Aspects of the Representation Theory of Finite Groups** Jon F. Carlson,Srikanth B. Iyengar,Julia Pevtsova,2018-10-04 These proceedings comprise two workshops celebrating the accomplishments of David J Benson on the occasion of his sixtieth birthday The papers presented at the meetings were representative of the many mathematical subjects he has worked on with an emphasis on group prepresentations and cohomology The first workshop was titled Groups Representations and Cohomology and held from June 22 to June 27 2015 at Sabhal M r Ostaig on the Isle of Skye Scotland The second was a combination of a summer school and workshop on the subject of Geometric Methods in the Representation Theory of Finite Groups and took place at the Pacific Institute for the Mathematical Sciences at the University of British Columbia in Vancouver from July 27 to August 5 2016 The contents of the volume include a composite of both summer school material and workshop derived survey articles on geometric and topological aspects of the representation theory of finite groups The mission of the annually sponsored Summer Schools is to train and draw new students and help Ph D students transition to independent research **Bimonoidal Categories, E_n-Monoidal Categories, and Algebraic K-Theory** Donald Yau,2024-10-08 Bimonoidal categories are categorical analogues of rings without additive inverses They have been actively studied in category theory homotopy theory and algebraic K theory since around 1970 There is an abundance of new applications and questions of bimonoidal categories in mathematics and other sciences The three books published by the AMS in the Mathematical Surveys and Monographs series under the general title Bimonoidal Categories E_n Monoidal Categories and Algebraic K Theory Volume I Symmetric Bimonoidal Categories and Monoidal Bicategories this book Volume II Braided Bimonoidal Categories with Applications and Volume III From Categories to Structured Ring Spectra provide a unified treatment of bimonoidal and higher ring like categories their connection with algebraic K theory and homotopy theory and applications to quantum groups and topological quantum computation With ample background material extensive coverage detailed presentation of both well known and new theorems and a list of open questions this work is a user friendly resource for beginners and experts alike Part 1 of this book proves in detail Laplaza s two coherence theorems and May s strictification theorem of symmetric bimonoidal categories as well as their bimonoidal analogues This part includes detailed corrections to several inaccurate statements and proofs found in the literature Part 2 proves Baez s Conjecture on the existence of a bi initial object in a 2 category of symmetric bimonoidal categories The next main theorem states that a matrix construction involving the matrix product and the matrix tensor product sends a

symmetric bimonoidal category with invertible distributivity morphisms to a symmetric monoidal bicategory with no strict structure morphisms in general   **Rings and Things and a Fine Array of Twentieth Century Associative Algebra** Carl Clifton Faith,2004 This book surveys more than 125 years of aspects of associative algebras especially ring and module theory It is the first to probe so extensively such a wealth of historical development Moreover the author brings the reader up to date in particular through his report on the subject in the second half of the twentieth century Included in the book are certain categorical properties from theorems of Frobenius and Stickelberger on the primary decomposition of finite Abelian formulations of the latter by Krull Goldman and others Maschke s theorem on the representation theory of finite groups over a field and the fundamental theorems of Wedderburn on the structure of finite dimensional algebras Goldie and others A special feature of the book is the in depth study of rings with chain condition on annihilator ideals pioneered by Noether Artin and Jacobson and refined and extended by many later mathematicians Two of the author s prior works Algebra Rings Modules and Categories I and II Springer Verlag 1973 are devoted to the development of modern associative algebra and ring and module theory Those bibliography of over 1 600 references and is exhaustively indexed In addition to the mathematical survey the author gives candid and descriptive impressions of the last half of the twentieth century in Part II Snapshots of fellow graduate students at the University of Kentucky and at Purdue Faith discusses his Fulbright Nato Postdoctoral at Heidelberg and at the Institute for Advanced Study IAS at Princeton his year as a visiting scholar at Berkeley and the many acquaintances he met there and in subsequent travels in India Europe and most recently Barcelona Comments on the first edition Researchers in algebra should find it both full references as to the origin and development of the theorem I know of no other work in print which does this as thoroughly and as broadly John O Neill University of Detroit at Mercy Part II Snapshots of Mathematicians of my age and younger will relish reading Snapshots James A Huckaba University of Missouri Columbia
