Readiness Harold F. O'Neil, Jr., Harold F. O'Neil, 2014-03-05 Current economic difficulties and the challenge of competing in the world market have necessitated a rethinking of American approaches to the utilization of people in organizations Management now recognizes a need to have workers take on more responsibility at the points of production of sale and of service rendered if the United States is to compete in rapidly changing world markets This development means that much more is expected of even entry level members of the American workforce Thus even more is expected of our high schools and colleges to provide this type of workforce The need of American management for workers with greater skills and who can take on greater responsibility has spawned many commissions task forces and studies All of them have contributed to the vast evidence documenting the need for a more highly skilled workforce These studies are summarized and synthesized in this book However what remains largely undone is the development of methods to assess the necessary skills that have been identified A major portion of this book deals with assessment issues **Workforce Readiness Competencies and Assessment** explores the state of the art in the specification of competencies skills and their assessment for students entering the world of work from both high school and college Both individual and team competencies are examined via data that has been reported and collected in various settings schools laboratories and industrial facilities The Standardized Coordination Task Assessment (SCTA) Oemig, Christoph, 2023-02-06 Today's modern world often affords individuals to form teams to work together towards shared goals and objectives The need for tools to digitally support collaboration distributed in time and space increased over the past decades significantly with a recent sudden increase due to the Corona pandemic crisis The research goal in the field of computer supported cooperative work CSCW has always been to design systems that facilitate collaboration based on the understanding of groups and social interaction especially on how people coordinate their work In the real world coordination happens in a seemingly seamless and effortless way However the resulting mechanisms translated to digital systems often provide a clumsy and awkward experience as users lack the means for subtle and rich interaction beyond the spoken word After numerous failures revealing system deficits and a large number of ethnographic studies researchers identified awareness to become the support mechanism for effortless coordination in digital systems Yet

instead of addressing the problem using appropriate methods and tools researchers found themselves trapped in circular reformulations of concepts and evaluations of prototypes on the basis of disciplinary preferences ignoring the basic characteristics of the objects of interest Even worse the most basic design tensions stemming from a use inspired perspective have not been resolved indicating a substantial problem with the evaluation of awareness and coordination support Effortless coordination cannot be reached without being measured thus not without an appropriate measurement approach This thesis introduces an appropriate assessment method for the efforts related to awareness and coordination support in cooperative settings the STANDARDIZED COORDINATION TASK ASSESSMENT SCTA Applying a use inspired basic research driven approach it creates and leverages an effort based operationalization of the two constructs derived from literature and especially from a cognitive perspective A highly automated and scalable framework delivers quantitative results to be used for hypotheses validations that allows a benchmark based approximation of effortless coordination At the same time the method opens the door for a lot more use inspired basic research to resolve many of the still open design tensions and challenges
