Specifics concerning creation are officially relegated into the realm of things indifferent to salvation or the life of the church. Various perspectives serve as popular alternatives to the six day creation within circles that still concern themselves with the question of biblical inerrancy.

*Petrified Forest National Park* George M. Lubick, 1996-04

Yellowstone Yosemite the Grand Canyon a few American national parks enjoy amusement park status eclipsing many other beautiful and significant parks due to their heavy political support and spectacular sights. Visitors to Petrified Forest National Park in northeastern Arizona can escape from the litter snack bars and crowds of the recreational parks to a 200 million year old ecosystem locked in stone. Enhanced by the unrivaled colorful beauty of the adjacent Painted Desert Petrified Forest National Park has captivated visitors since the area was discovered by early explorers. The history of the huge fossilized forest parallels that of Arizona. It was discovered and looted by adventurers and largely ignored by the government until President Theodore Roosevelt made it a national monument in 1906. The forest's location along Route 66 brought a large number of visitors during the time it enjoyed only monument status but lack of funding for protection allowed much damage and theft of fossilized wood. Petrified Forest National Park A Wilderness Bound in Time speeds the reader on an ancient ecological journey from the time of dinosaurs to the discovery of their Triassic fossils and on through a century of political maneuvering to create a place for the forest in American history. George Lubick describes how a dedicated few understood the environmental importance as well as the unique beauty of the park's Triassic Chinle Formation and the Painted Desert. Nearly a million people visit the Triassic annually this environmental history of the ancient forest is important for those who know the park as well as those interested in natural America. Petrified Forest National Park is one of the few complete histories of any national park a well told balanced treatment of the environmental political and historical factors that shape America's natural history.

**The Last Lost World** Lydia Pyne, Stephen J. Pyne, 2012-06-14

An enlightening investigation of the Pleistocene's dual character as a geologic time and as a cultural idea. The Pleistocene is the epoch of geologic time closest to our own. It's a time of ice ages global migrations and mass extinctions of woolly rhinos mammoths giant ground sloths and not least early species of Homo. It's the world that created ours. But outside that environmental story there exists a parallel narrative that describes how our ideas about the Pleistocene have emerged. This story explains the place of the Pleistocene in shaping intellectual culture and the role of a rapidly evolving culture in creating the idea of the Pleistocene and in establishing its dimensions. This second story addresses how the epoch its Earth shaping events and its creatures both those that survived and those that disappeared helped kindle new sciences and a new origins story as the sciences split from the humanities as a way of looking at the past. Ultimately it is the story of how the dominant creature to emerge from the frost and fire world of the Pleistocene came to understand its place in the scheme of things. A remarkable synthesis of science and history. The Last Lost World describes the

world that made our modern one      The Eocene-Oligocene Transition Donald R. Prothero, 1994 After a decade of new findings and interpretation based on innovative techniques during the 1980s archaeologists were pretty sure that 38 million years ago the earth still basked in a subtropical greenhouse that had lasted since the age of dinosaurs but 5 million years later there were glaciers in the Antarctic signalling the beginning of the icehouse state that we know now Here is a summary of the present understanding of the climatic and biological changes for nonspecialists who have some familiarity with the terms and concepts of archaeology Paper edition 08091 3 24 Annotation copyright by Book News Inc Portland OR

Studying Human Origins Raymond Corbey, Wil Roebroeks, 2001 This history of human origin studies covers a wide range of disciplines This important new study analyses a number of key episodes from palaeolithic archaeology palaeoanthropology primatology and evolutionary theory in terms of various ideas on how one should go about such reconstructions and what if any the uses of such historiographical exercises can be for current research in these disciplines Their carefully argued point is that studying the history of palaeoanthropological thinking about the past can enhance the quality of current research on human origins The main issues in the present volume are the uses of disciplinary history in terms of present day research concerns the relative weight of cultural and other external contexts and continuity and change in theoretical perspectives The book's overall approach is an epistemological one It does not in other words primarily address anthropological data as such but our ways of handling such data in terms of our most fundamental but usually quite implicit theoretical presuppositions      *Earth Science* Christina Reed, 2010-06-23 Contains a history of earth sciences providing definitions and explanations of related topics plus brief biographies of scientists of the twentieth century      Dating and Earthquakes Janet M.
