Ecology And Conservation Of Southeast Asian Marine And Freshwater Environments Including Wetlands:

Ecology and Conservation of Southeast Asian Marine and Freshwater Environments including Wetlands A.

Sasekumar, Nissim Marshall, D.J. Macintosh, 2012-12-06 A major concern among ecologists in and outside the ASEAN region is the degradation of the environment and the overexploitation of freshwater and marine resources. There is as yet no indication that freshwater and marine resources are being managed on a sustainable basis and loss of wetlands, whether freshwater swamps or mangrove swamps, is a major problem in the ASEAN region. Reclamation of mangrove swamps for aquaculture and agriculture seems to be a continuous activity here and the status of marine parks should also be examined in the light of recent resort development activities on small islands. This volume contains numerous recommendations for the promotion of ecological studies and regional cooperation in marine freshwater ecology and conservation with special emphasis on the common water masses like the Strait of Malacca, Gulf of Thailand and the South China Sea. **Integrated**

Protected Area Management Michael Walkey, Ian R. Swingland, Shaun Russell, 2012-12-06 Protected areas have become an increasingly important tool both in the conservation of biodiversity and in revenue generation through sustainable use. This is the only sure way to guarantee the protection necessary for many species habitats and ecosystems in the future. Integrated Protected Area Management features contributions that consider the design, management and sustainable use of these regions. Three principal aspects are considered: the theory and practice of designation; community based conservation; and the concept of sustainability identifying priorities for management. The emphasis throughout is on the importance of an interdisciplinary approach to planning and the active involvement of all stakeholders in decision making processes as a means of ensuring long term sustainability. *Coastal Ecosystem Processes* Daniel M. Alongi, 2020-11-25 Coastal Ecosystem

Processes written by the renowned marine scientist Daniel Alongi describes how pelagic and benthic food webs from beaches and tidal flats to the continental edge process energy and matter. This volume focuses on recent advances and new developments on how food webs are closely intertwined with the geology, chemistry and physics of coastal seas. Dr Alongi presents a process functional approach as a way of understanding how the energetics of coastal ecosystems rely not only on exchanges within and between food chains but how such functions are influenced by terrigenous and atmospheric processes. There is a need for documentation and an awareness of just how necessary yet delicate is the interplay of biological and physical forces between coastal ocean, land and the atmosphere. Marine scientists today need to make informed management decisions about sustainable development and conservation of these fragile ecosystems. *Coastal Ecosystem Processes* provides present and future marine scientists the latest coastal ecosystem information to make the right decisions concerning the ecology of our oceans. *Tropical Freshwater Wetlands* H. Roggeri, 2013-03-09 Wetlands could be described as land and

water at the same time and as such are very specific on the brink of ecosystems. Their often rich variety of resources makes them highly valuable to the peoples who live with them. With a few exceptions like the Everglades in the or

regularly stay in them However access to them United States the last remaining large wetlands are to be found in developing countries Perhaps this can be difficult and those unaware of their services be explained by insufficient financial resources frequently associate wetlands with such nuisances and calamities as mosquitos disease floods impen lower popUlation density or a different concept of etrable wastelands etc As a result these areas are development and well being Whatever the reasons often perceived as obstacles to human development many tropical wetlands still exist and support the and well being subsistence of many communities But for how much History reflects these two views Wetlands may longer have been the cradle of great civilizations like the During the last few decades tropical wetlands Maya Inca Aztec Nilotic and Mesopotamian have also been destroyed or considerably altered Dams and embankments now prevent water from civilizations but elsewhere their destruction allowed other societies to develop For example the Nether spreading into the floodplains of several rivers like lands literally emerged from the waters thanks to the Senegal Volta and Nile *Fisheries Review* ,1994

Perspectives on Integrated Coastal Zone Management Wim Salomons,Kerry Turner,Luiz D. de Lacerda,S. Ramachandran,2012-12-06 All coastal areas are facing a growing range of stresses and shocks the scale of which now poses threats to the resilience of both human and environmental coastal systems Responsible agencies are seeking better ways of managing the causes and consequences of the environmental change process in coastal zones This volume discusses the basic principles underpinning a more integrated approach to coastal management and highlights the obstacles that may be met in practice in both developed and developing countries Successful strategies will have to encompass all the elements of management from planning and design through financing and implementation as highlighted in this book

Environmental Impacts of Aquaculture Kenneth D. Black,2001 The continued expansion of aquaculture in a wide range of environments and of a growing number of species has lead to increasing demands on aquatic resources These demands vary with the culture species the culture method and the environmental and ecological setting While there are many examples of efforts to mitigate detrimental environmental effects the environment remains the ultimate constraint on the future sustainable development of this maturing industry The relationships between the activities of aquaculture and the environment are therefore of economic importance as well as of scientific interest and for these reasons a large international research community has developed over the past decade In this volume the resultant research is synthesised and critically reviewed providing a source of reference to the most important recent developments at research and professional level The authors are internationally recognised authorities who have made significant contributions to their respective research areas The first part of the volume is organised in terms of the major culture types This is followed by chapters of general relevance to aquaculture The volume is designed to complement *Biology of Farmed Fish* eds K D Black A D Pickering also published in this series It is directed at fish biologists shellfish biologists and environmental scientists working in the academic governmental and industrial sectors *Mangroves: Ecology, Biodiversity and Management* Rajesh P. Rastogi,Mahendra

Phulwaria,Dharmendra K. Gupta,2021-10-01 Mangroves are one of the most productive and biologically important blue carbon ecosystems across the coastal intertidal zone of earth In the current scenario of serious environmental changes like global warming climate change extreme natural disasters mangrove forests play a vital role in mitigating greenhouse gas emissions and maintaining ecosystem balance Mangroves are unique ecosystems with rich biological diversity of different taxonomic groups exhibiting great ecological and commercial importance The book consolidates existing and emerging information on ecology of mangroves with a special reference to their biodiversity and management It emphasizes on the role of mangroves in providing various ecological services The book is a comprehensive compilation covering all aspects of mangrove ecology It is useful for students and researchers in ecology plants sciences and environmental sciences *Marine Mammal Welfare* Andy Butterworth,2017-06-19 Marine mammals attract human interest sometimes this interest is benign or positive whale watching conservation programmes for whales seals otters and efforts to clear beaches of marine debris are seen as proactive steps to support these animals However there are many forces operating to affect adversely the lives of whales seals manatees otters and polar bears and this book explores how the welfare of marine mammals has been affected and how they have adapted moved responded and sometimes suffered as a result of the changing marine and human world around them Marine mammal welfare addresses the welfare effects of marine debris of human traffic in the oceans of noise of hunting of whale watching and tourism and of some of the less obvious impacts on marine mammals on their social structures on their behaviours and migration and also of the effects on captivity for animals kept in zoos and aquaria There is much to think and talk about how marine mammals respond in a world dramatically influenced by man how are their social structures affected and how is their welfare impacted *Marine Decapod Crustacea* Gary C.B. Poore,Shane T. Ahyong,2023-01-23 Decapod crustaceans shrimps crabs prawns and their allies are highly visible and important members of marine environments They are among the most charismatic of marine animals inhabiting beaches rocky shores and the deep sea hiding under stones burrowing in the sediment and nestling in among algae and many other microhabitats However most are difficult to identify by the specialist and amateur naturalist alike Marine Decapod Crustacea explains the anatomical features necessary for differentiating taxa and includes diagnoses and identification keys to all 189 families and 2121 genera of marine Decapoda Many decapods have vivid colours which are showcased in a selection of spectacular photographs of many representative species This volume provides an entry to the literature for taxonomists naturalists consultants ecologists teachers and students wanting to identify local faunas and understand this diverse group **Tropical Estuarine Fishes** Stephen J. M. Blaber,2008-04-30 Research on the large array of tropical estuarine fishes has increased markedly in recent years and hence scientific knowledge about most aspects of these important fishes biology and ecology is now catching up with that of their temperate equivalents This landmark book draws together a vast wealth of information on tropical estuarine fishes and provides a vital reference point for all aspects of their study The book s comprehensive contents include

thorough coverage of the types and distribution of these fishes their diversity and the environmental conditions and communities in which they live Full details of their biology and ecology are an integral part of this book as are details of these fishes dependence on estuaries man s interaction with the estuarine fish community and the conservation of estuarine species and the often threatened habitats upon which they depend The author Stephen Blaber has a vast wealth of experience in the subject areas covered by this book and has produced a stimulating and extremely valuable volume that will be of huge importance for all those concerned with these fishes He is based at CSIRO Marine Research Cleveland Queensland Australia Readership should include fish biologists fisheries scientists aquatic scientists including those concerned with brackish marine and freshwater environments ecologists environmental scientists and population biologists Students studying for qualifications in fish biology and fisheries particularly where there is a tropical element to their course will find this book of great value as a reference Copies of the book should be available on the shelves of all libraries in research establishments and universities where biological sciences fish biology fisheries science or aquatic sciences are studied and taught

Marine Natural Products Research in South-East Asia Lik Tong Tan,Novriyandi Hanif,2025-09-30 This unprecedented volume offers a comprehensive review of marine natural products research across Southeast Asia a region teeming with untapped marine biodiversity It provides an extensive survey of the chemistry and biology of specialized metabolites derived from marine organisms such as sponges tunicates soft corals and marine microbes Highlighting both the scientific advances and critical gaps the book identifies strategic areas for future research and drug discovery initiatives With its regional focus and collaborative insights this edited collection serves as a vital resource for researchers policymakers and industry stakeholders engaged in marine biotechnology and sustainable pharmaceutical development in one of the world s most biodiverse marine ecosystems

Maritime Clusters and the Ocean Economy Peter B. Myles,2017-09-07 Over the last decade the concept of clustering has become a central idea for analyzing the competitiveness of nations industries and firms This book shows how the cluster concept can be usefully applied to the study of maritime activities Such activities including shipping shipbuilding and port and maritime services are clearly geographically concentrated in a number of maritime clusters However as the author shows these are having to compete with other uses of the coasts and oceans including capture fisheries marine aquaculture offshore energy and tourism Sound governance and planning is therefore required to manage the competing claims for ocean space The book shows how competing industries and other stakeholders can cooperate and benefit from an integrated approach to the development of maritime clusters The contribution of approaches such as integrated coastal zone management and innovations such as ocean business councils as well as coordinated networks of maritime clusters are reviewed Case studies are included from around the world including detailed examples of the development of the Nelson Mandela Bay Maritime Cluster in South Africa and from Poland in the Baltic Sea

Oceanography and Marine Biology R.N. Hughes,D. J. Hughes,I.

P. Smith,A.C. Dale,2016-11-25 Ever increasing interest in oceanography and marine biology and their relevance to global environmental issues create a demand for authoritative reviews summarizing the results of recent research Oceanography and Marine Biology An Annual Review has catered to this demand since its founding by the late Harold Barnes more than 50 years ago Its objectives are to consider annually the basic areas of marine research returning to them when appropriate in future volumes to deal with subjects of special and topical importance and to add new subjects as they arise The favourable reception and complimentary reviews accorded to all the volumes shows that the series is fulfilling a very real need Volume 54 follows closely the objectives and style of the earlier volumes continuing to regard the marine sciences with all their various aspects as a unity Physical chemical and biological aspects of marine science are dealt with by experts actively engaged in these fields The series is an essential reference text for researchers and students in all fields of marine science and related subjects and it finds a place in libraries of universities marine laboratories research institutes and government departments It is consistently among the highest ranking series in terms of impact factor in the marine biology category of the citation indices compiled by the Institute for Scientific Information Web of Science Biodiversity Hotspot of the Western Ghats and Sri Lanka T.
