This compact and reader-friendly book introduces students to materials and studies that are gaining importance in the study of fossils. It covers all the important branches of palaeontology and provides up-to-date and detailed analysis of the principles of palaeontology, systematics, palaeogeology, evolution, invertebrate and vertebrate palaeontology, palaeobotany and micropalaeontology. The text takes a holistic approach to the subject with concrete examples. Primarily intended for undergraduate and postgraduate students of Geology or Earth Sciences, the book will also prove useful for Zoology and Botany undergraduates. Geologists, particularly those assigned with jobs on palaeontology, micropalaeontology, palaeobotany, will benefit from the text. Finally, students and research scientists intending to work with Indian problems concerning palaeontology should find the book beneficial. **KEY FEATURES** Provides up-to-date data, concepts and Indian examples of fossils. Furnishes important data for laboratory work and Indian stratigraphy. Gives pertinent information on Fossil Lagerstätten in a tabulated form.

Paleoecology David J. Bottjer, 2016-04-18. **PALEOECOLOGY** PALEOECOLOGY Past, Present and Future. Paleoecology is a discipline that uses evidence from fossils to provide an understanding of ancient environments and the ecological history of life through geological time. This text covers the fundamental approaches that have provided the foundation for present paleoecological understanding and outlines new research areas in paleoecology for managing future environmental and ecological change. Topics include the use of actualism in paleoecology, development of paleoecological models for paleoenvironmental reconstruction, taphonomy and exceptional fossil preservation, evolutionary paleoecology and ecological change through time, and conservation paleoecology. Data from studies of invertebrates, vertebrates, plants, and microfossils, with added emphasis on bioturbation and microbial sedimentary structures, are discussed. Examples from marine and terrestrial environments are covered with a particular focus on periods of great ecological change, such as the Precambrian-Cambrian transition and intervals of mass extinction. **Readership:** This book is designed for advanced undergraduates and beginning graduate students in the earth and biological sciences, as well as researchers and applied scientists in a range of related disciplines.

The Bassingbourn Fossil Diggings Bernard O'Connor, *Fossil Digging in the Mordens* Bernard O'Connor, 2011-10-29. In the 1840s an unusual industry started in Cambridgeshire: open cast mining of a fossil deposit, thought by some to be dinosaur droppings. It was used as the raw material in the manufacture of superphosphate, the world's first chemical fertiliser. This book investigates the social, economic and environmental impact of the diggings in Guilden and Steeple Morden. **Coton Fossil Diggings** Bernard O'Connor, 2011. *Principles of Sedimentary Basin Analysis* Andrew Miall, 2013-04-17. This book is intended as a practical handbook for those engaged in the task of analyzing the paleogeographic evolution of ancient sedimentary basins. The science of stratigraphy and sedimentology is central to such

endeavors but although several excellent textbooks on sedimentology have appeared in recent years little has been written about modern stratigraphic methods Sedimentology textbooks tend to take a theoretical approach building from physical and chemical theory and studies of modern environments It is commonly difficult to apply this information to practical problems in ancient rocks and very little guidance is given on methods of observation mapping and interpretation In this book theory is downplayed and the emphasis is on what a geologist can actually see in outcrops well records and cores and what can be obtained using geophysical techniques A new approach is taken to stratigraphy which attempts to explain the genesis of lithostratigraphic units and to de-emphasize the importance of formal description and naming There are also sections explaining principles of facies analysis basin mapping methods depositional systems and the study of basin thermal history so important to the genesis of fuels and minerals Lastly an attempt is made to tie everything together by considering basins in the context of plate tectonics and eustatic sea level changes

Fossils Richard A. Fortey, 2009 Discusses the formation of fossils describes how they are used by scientists to reconstruct the history of the earth and offers guidance on starting a fossil collection
