Economics And The Global Environment:

Economics and the Global Environment Charles S. Pearson, 2000-10-09 Path breaking comprehensive analysis of how economic and environmental systems mesh in the international context **Economics and the Global Environment**

Charles S. Pearson, 2000-10-09 Economics and the Global Environment is a path breaking comprehensive analysis of how economic and environmental systems mesh in the international context The book investigates if and how environmental resources such as global climate genetic diversity and transboundary pollution can be managed in an international system of sovereign states without a Global Environment Protection Agency It also considers traditional international economics theory and policy and explores how they can be expanded to accommodate environmental values Until recently trade theory and trade policy neglected pollution and environmental degradation This situation has changed dramatically and the controversial and corrosive issues of trade and the environment are here given careful analysis These topics are enriched by a concise presentation of the principles of environmental economics and a thoughtful treatment of sustainable development The book will appeal to students and practitioners of trade and development as well as the environmental community *The Economics of the Global Environment* Graciela Chichilnisky, Armon Rezai, 2017-05-18 This is the first book combining

research on the Global Environment Catastrophic Risks and Economic Theory and Policy Modern economic theory originated in the middle of the twentieth century when industrial expansion coupled with population growth led to a voracious use of natural resources and global environmental concerns It is uncontested that for the first time in recorded history humans dominate the planet changing the planet's atmosphere its bodies of water and the complex web of species that makes life on earth This radical change in circumstances led to rethinking of the foundations of human organization and in particular the industrial economy and the economic theory behind it This book brings together new approaches on multiple levels environmental sustainability requires rethinking in terms of economic theory and policy as well as the considerations of catastrophic risk and extremal events Leading experts address questions of economic governance risk management policy decision making and distribution across time and space **Paths to a Green World The Political Economy of the Global Environment** Jennifer Clapp And Peter Dauvergne, 2008 **Paths to a Green World, second edition** Jennifer Clapp, Peter Dauvergne, 2011-03-11 A new edition of a book that takes a comprehensive look at the ways economic processes affect global environmental outcomes This comprehensive and accessible book fills the need for a political economy view of global environmental politics focusing on the ways international economic processes affect environmental outcomes It examines the main actors and forces shaping global environmental management particularly in the developing world Moving beyond the usual emphasis on international agreements and institutions it strives to capture not only academic theoretical debates but also views on politics economics and the environment within the halls of global conferences on the streets during antiglobalization protests and in the boardrooms of international agencies nongovernmental organizations and industry

associations The book maps out an original typology of four contrasting worldviews of environmental change those of market liberals institutionalists bioenvironmentalists and social greens and uses them as a framework to examine the links between the global political economy and ecological change This typology provides a common language for students instructors and scholars to discuss the issues across the classical social science divisions The second edition of this popular text has been thoroughly revised and updated to reflect recent events including the food crisis of 2007 2008 the financial meltdown of 2008 and the Copenhagen Climate Conference of 2009 Topics covered include the environmental implications of globalization wealth poverty and consumption global trade transnational corporations and multilateral and private finance

Paths to a Green World Jennifer Clapp, Peter Dauvergne, 2005 Examines the debates over the causes and consequences of environmental change from economic political ecological and social perspectives

Economics and the Challenge of Global Warming Charles S. Pearson, 2011-09-19 Economics and the Challenge of Global Warming is a balanced rigorous and comprehensive analysis of the role of economics in confronting global warming the central environmental issue of the twenty first century It avoids a technical exposition in order to reach a wide audience and is up to date in its theoretical and empirical underpinnings It is addressed to all who have some knowledge of economic concepts and a serious interest in how economics can and cannot help in crafting climate policy The book is organized around three central questions First can benefit cost analysis guide us in setting warming targets Second what strategies and policies are cost effective Third and most difficult can a global agreement be forged between rich and poor North and South While economic concepts are foremost in the analysis they are placed within an accessible ethical and political matrix The book serves as a primer for the post Kyoto era

The Global Environment of Business Frederick Guy, 2009-03-26 Frederick Guy's The Global Environment of Business offers a multi dimensional analysis of the environment in which international business operates International How do multi national corporations nation states regional trade blocs markets and global institutions interact to shape the international economic system Who wins and who loses when the economy internationalizes Is internationalization leading to a global world or a regional one How will efforts to curtail and adapt to climate change affect international business Technological and historical How has the business environment been shaped by production systems new methods of business organization information and communication technology transport and the process of technological change itself Comparative How do institutional differences affect national specialization and economic performance How do the business systems of Europe differ from that of the United States or those of East Asia from those of Latin America Why do location and face to face contact matter in an age of high speed communication and cheap long distance transportation Why have some countries grown so fast while others remain poor The Global Environment of Business draws on extensive research by economists political scientists sociologists geographers and business historians There is more theory and academic debate here than in most books on the subject but it is presented and explained clearly and illustrated with lots of examples

The

Global Environment, Natural Resources, and Economic Growth Alfred Greiner, Will Semmler, 2008-07-25 Recently the public attention has turned toward the intricate interrelation between economic growth and global warming. This book focuses on this nexus but broadens the framework to study the issue. Growth is seen as global growth which affects the global environment and climate change. Global growth in particular high economic growth rates imply a fast depletion of renewable and non-renewable resources. Thus this book deals with the impact of the environment and the effect of the exhaustive use of natural resources on economic growth and welfare of market economies as well as the reverse linkage. It is arranged in three parts. Part I of the book discusses the environment and growth. There Greiner and Semmler incorporate the role of environmental pollution into modern endogenous growth models and use recently developed dynamic methods and techniques to derive appropriate abatement activities that policymakers can institute. Part II looks at global climate change using these same growth models. Here too the authors provide direct and transparent policy implications. More specifically the authors favour tax measures such as a carbon tax over emission trading as instruments of mitigation policies. Part III evaluates the use and overuse of renewable and non-renewable resources in the context of a variety of dynamic models. They in particular consider the cases when resources interact as an ecological system and analyze issues of ownership of resources as well as policy measures to avoid the overuse of resources. In addition not only intertemporal resource allocation but also the eminent issues relating to intertemporal inequities as well as policy measures to overcome them are discussed in each part of the book.

Understanding the Global Environment Samir Dasgupta, 2009 Globalization is often discussed in terms of its ecological ramifications. Yet while ecological imbalance is today one of the greatest threats to mankind, globalization is also a reality that is here to stay. The volume therefore seeks to address how globalizing and environmental interests can be reconciled. The essays in this volume state that globalization can work both in favour of and against the environment. The major issues discussed in this topical volume are how globalization can be used to promote environmental reforms, the role of individuals, private organizations and governments in keeping environmental degradation in check and in promoting environmental reform, globalization and ecological inequality, women, the environment and globalization, changing nature of environmental movements, overpopulation and the ecology, the relation between the ecology and the economy and the effects of global climate changes.

Current Problems of the Global Environmental Economy Under the Conditions of Climate Change and the Perspectives of Sustainable Development Elena G. Popkova, Bruno S. Sergi, 2023-01-31

This book presents a systemic view of the global environmental economy under the conditions of climate change from the positions of Sustainable Development Goals. The purpose of the book is to study the current problems of the global environmental economy under the conditions of climate change and to determine the prospects of its sustainable development systemic support for the SDGs. This goal predetermines the logic and structure of the book which is comprised of five parts. Part I presents the authors' novel view of the global environmental economy under the conditions of climate change from the positions of the SDGs. It reflects the contradiction and describes the path of preserving economic growth during the implementation of SDG 13. The COVID 19 pandemic and economic crisis are considered as the result of the reduction of biodiversity under the conditions of climate change from the positions of SDG 3. Responsible innovations, eco-friendly products and green trade are presented as trends of the environmental economy under the conditions of climate change to support SDG 12. Green jobs are analyzed in the environmental economy under the conditions of climate change during the implementation of SDG 8. The significance of social inclusivity and reduction of the inequality of the environmental economy under the conditions of climate change to support SDG 10 is noted. Part II elaborates on the sectoral specifics of the influence of climate change on the environmental economy: energetics, finance, industry, state management and agriculture. Part III presents and discusses the international experience of development of the environmental economy under the conditions of climate change given the specifics of developed and developing countries and based on the case experience of Central Asia, the EAEU and Russia. In Part IV, technological transition, Fourth Industrial Revolution is offered as a perspective response of the global economic policy to climate change. Scenarios of the fight against climate change in the Decade of Action depending on the scale of the technological transition are described: digital economy vs Industry 4.0 and Society 5.0. The perspectives of the technological transition at the level of companies, creation of cyber-physical systems of Industry 4.0, green digital innovations and smart ESG finance and regions, smart region as a socio-economic environment with large adaptability to climate change are described.
