How can economics contribute to environmental and social sustainability? The significance of systems theory and the embedded economy

Keith R. Skene*

Biosphere Research Institute, Letham, United Kingdom

Concerns relating to resource extraction, manufacturing, waste in our supply chains, along with increasing consumption and with their consequences for the planet, have, to a greater or lesser extent, begun to impact the ideological approach and the decision-making of governments, business and consumers alike on the material world we continue to create. Parallel concerns circle around social and environmental resilience, recovery and sustainability. This paper seeks to explore what a sustainable economy should look like in order to contribute to a resilient, diverse and thriving planet, while furthering resilient, diverse and thriving communities. It is argued that at the center of any sustainability theory, whether economic, environmental or social, lies the Earth system. The Earth system represents much more than the organisms sharing this planet with ourselves. Rather, it involves the fluxes of radiation, food energy, water, nutrients and heat. More essentially, it determines our niche space [the multidimensional space where tolerances and requirements interact to determine the habitable space within which an organism can practice its way of life]. Given that humans are some of the most vulnerable organisms on the planet in terms of the narrow range of conditions within which they can survive, the dynamic nature of the planet that determines this range of conditions must surely form the prime focus of our attentions. The Earth System, like all complex, far-from-equilibrium systems, is self-organizing, self-assembling, emergent, non-linear and governed by real-time feedback and sub-optimality at each level of its organization. The consequences of these properties for our economic activities and, indeed, for our own species, are discussed. It is further argued that we need an embedded economy. Fundamental to this exploration are the concept of *zusammenhang* (literally, hanging together), as developed by Humboldt, and the concept of the Earth as a super-organism, as developed by Hutton. Natural economics within the Earth system is explored and key properties of this economy are highlighted. The embedded economy functions in a way that facilitates natural and social recovery: resilience and functionality, while in resonance with the key characteristics of the Earth system. Artificial intelligence, utilizing ecological intelligence rather than human intelligence, and the internet of things, are identified as potentially significant tools in the establishment of an embedded economy.

Eliasson,Christopher Green,Charles R. McCann, Jr.,2025-10-01 The contributors to this volume seek further understanding of the microfoundations of economic growth It focuses on three subjects that interested the great Austrian and Harvard economist Joseph A Schumpeter innovation technological change and economic growth The first part of the volume treats institutions markets and entrepreneurs without which analysis of the firm makes little or no sense The second part focuses on the firm as innovator placing heavy emphasis on the role of knowledge formation The subjects of innovation and knowledge formation are approached from three perspectives theoretical industry case studies and empirical cross section and panel data analysis In the third part of the book the action moves from the firm to the macro or economy wide level The volume s unique feature is combining institutions the innovative behavior of firms and an intuitively dynamic macroeconomic analysis all from a Schumpeterian perspective It is argued that the study of micro institutions such as firms and the evolving nature of

markets are necessary ingredients to understanding macro oriented phenomena such as economic growth It is in this sense then that the book is concerned with microfoundations Contributors are Daniele Archibugi Spyros Arvanitis David B Audretsch John R Baldwin Gerard Ballot Pontus Braunerhjelm Dagobert L Brito Uwe Cantner Bo Carlsson Robert W Clower Richard Day Rinaldo Evangelista Jan Glete Horst Hanusch Heinz Hollenstein Michael D Intriligator George Johnson Joanne Johnson Aija Leiponen Staffan Laestadius Richard N Langlois Frank M Machovec Maureen McKelvey Valentina Meiciani Douglass C North Giulio Perani Andreas Pyka Fabio Rapiti Roberto Simonetti Frank Stafford Paula E Stephan Erol Taymaz Clas Wihlborg Erica R Worth and S Y Wu Gunnar K Eliasson is Professor of Industrial Economics Royal Technical Institute KTH Stockholm Christopher Green is Professor of Economics McGill University Charles R McCann Jr is Research Associate Department of Economics University of Pittsburgh
