Abstract

Background: Children with specific language impairment are known to struggle with expressive grammar. While some studies have shown successful intervention under laboratory conditions, there is a paucity of evidence for the effectiveness of grammar treatment in young children in community settings.

Aim: To evaluate the effectiveness of a school-based intervention programme for expressive grammar in 5-year-olds with specific language impairment.

Method & Procedures: Thirty-four 5-year-old children attending a specialized school for children with language impairment participated in the study. Nineteen children received treatment for expressive grammar (experimental group) and 15 children received a control treatment. Treatment consisted of weekly 1-h sessions of small group activities in a classroom setting for 8 weeks. Techniques included direct instruction, focused stimulation, recasting and imitation.

Outcomes & Results: Results were analysed at the group level and as a case series with each child as their own control in a single-subject design. There was a significant difference in grammatical performance pre- and post-treatment for children who received grammar treatment (Cohen's $d = 1.24$), but not for a group of children who received a control treatment. Further, no difference in performance was found in the equivalent time period prior to treatment, nor for an untreated target. Treatment success was more pronounced in children without articulation difficulties which interfered with their ability to produce the grammatical targets (Cohen's $d = 1.66$). Individual analyses indicated the treatment effect was significant for the majority of children.

Conclusions & Implications: Individually targeted intervention delivered in small groups in a classroom setting was effective in improving production of expressive grammatical targets in 5-year-old children with specific language impairment.

Keywords: specific language impairment, intervention, grammar, efficacy.

What this paper adds

What is already known on this subject?

Children with specific language impairment have difficulty with expressive grammar. Intervention has been successful with young children in laboratory settings. The effectiveness of intervention in a community setting has yet to be established.

What this study adds

This study demonstrates that eight weekly sessions of classroom-based expressive grammar intervention can be effective when delivered in small groups, goals are individually selected for each child and a defined cuing hierarchy is used to correct errors.

Treatment as a tool for investigating cognition Lyndsey Nickels, Saskia Kohnen, Brenda Rapp, 2018-02-05 Cognitive neuropsychological research studies of people with cognitive deficits have typically been directed either at investigating methods of intervention or at furthering our understanding of normal and impaired cognition This book reports on research that combines these goals using studies that use intervention as a tool for investigating hypotheses about the functioning of the human cognitive system The introductory chapter discusses some of the unique and more general difficulties that this approach faces while the five reports describe intervention studies with children and adults with cognitive impairments studies which investigate current theories of cognition The studies demonstrate that the use of intervention to study cognition is a promising and valuable methodology Aiming to promote wider use of these combined methods this book makes it clear that while the approach faces various methodological and interpretative challenges it has the advantage of providing advances on issues of theory while at the same time providing treatment to participants and bringing together what have been largely separate research traditions This book was originally published as a special issue of Cognitive Neuropsychology

Language Disorders in Children and Adults Victoria Joffe, Madeline Cruice, Shula Chiat, 2008-09-15 This book contains contributions from eminent clinicians and researchers in the field of language impairment and crosses the bridge between children and adults. It reflects the developments that have taken place in Speech and Language Therapy over the past 10 years and focuses on issues in SLT that have recently come into ascendancy. These include personal and social consequences of language disability and how to measure these, the evidence base for speech and language therapy interventions, language processing and the interplay between language and cognition, and the degree to which impairments in one affect the other. There is a growing concern about the needs of adolescents who have language difficulties, a group who by their age, development, and experience straddle the child/adult divide. It extends the themes by looking at future implications and sets out the challenges ahead for the speech and language therapy profession.

Assessment of Language Disorders in Children Rebecca J. McCauley, 2013-03-07 This book constitutes a clear, comprehensive, up-to-date introduction to the basic principles of psychological and educational assessment that underlie effective clinical decisions about childhood language disorders. Rebecca McCauley describes specific, commonly used tools as well as general approaches ranging from traditional standardized norm-referenced testing to more recent ones such as dynamic and qualitative assessment. Highlighting special considerations in testing and expected patterns of performance, she reviews the challenges presented by children with a variety of problems: specific language impairment, hearing loss, mental retardation, and autism spectrum disorders. Three extended case examples illustrate her discussion of each of these target groups. Her overarching theme is the crucial role of well-formed questions as fundamental guides to decision making, independent of approach. Each chapter features lists of key concepts and terms, study questions, and recommended readings. Tables throughout offer succinct summaries and aids to memory. Students, their instructors, and speech language pathologists continuing their professional education will all welcome this invaluable new resource. Distinctive features include: A comprehensive consideration of both psychometric and descriptive approaches to the characterization of children's language. A detailed discussion of background issues important in the language assessment of the major groups of children with language impairment. Timely information on assessment of change, a topic frequently not covered in other texts. Extensive guidance on how to evaluate individual norm-referenced measures for adoption. An extensive appendix listing about 50 measures used to assess language in children. A test review guide that can be reproduced for use by readers.
