Complex Problem Solving Beyond the Psychometric Approach Wolfgang Schoppek, Joachim Funke, Magda Osman, Annette Kluge, 2018-09-28 Complex problem solving CPS and related topics such as dynamic decision making DDM and complex dynamic control CDC represent multifaceted psychological phenomena In a broad sense CPS encompasses learning decision making and acting in complex and dynamic situations Moreover solutions to problems that people face in such situations are often generated in teams or groups This adds another layer of complexity to the situation itself because of the emerging issues that arise from the social dynamics of group interactions This framing of CPS means that it is not a single construct that can be measured by using a particular type of CPS task e.g. minimal complex system tests which is a view taken by the psychometric community

The proposed approach taken here is that because CPS is multifaceted multiple approaches need to be taken to fully capture and understand what it is and how the different cognitive processes associated with it complement each other Thus this Research Topic is aimed at showcasing the latest work in the fields of CPS as well as DDM and CDC that takes a holist approach to investigating and theorizing about these abilities The collection of articles encompasses conceptual approaches as well as experimental and correlational studies involving established or new tools to examine CPS DDM and CDC This work contributes to answering questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another what learning conditions result in transferable knowledge and skills and how these features can be trained

with an accessible style and practical examples that help students apply what they learn CUSTOM: Grand Canyon University ADM 620 Leading Public Organizations Custom Electronic Edition Peter G. Northouse, 2018-10-18 This is a custom eBook for Grand Canyon University Advanced Abnormal Child Psychology Michel Hersen, Robert T. Ammerman, 2000-02

There was a time when abnormal child psychology was the stepchild of abnormal psychology with perhaps one or two chapters in an entire advanced textbook devoted to children. Given the explosive amount of new research on child development in general since the 1980s, stepchild is obviously no longer a valid characterization. Indeed, in the last 15 years many new journals devoted to childhood problems have made their appearance on library bookshelves. The first edition of this book was assembled in an effort to integrate the empirical and clinical literatures and show the advanced undergraduate and beginning graduate student the breadth and depth of our existing knowledge about the disorders that manifest themselves early in development. Now, since its publication in 1995, a great deal more work has been done. This revised and expanded second edition includes much new material from the first edition, authors, and from several new ones, all respected experts in the field. Part I offers an overview. It outlines historical developments with documentation of the neglect and abuse that children suffered at the hands of society well into the 20th century, developmental psychopathology as a theoretical framework to guide research and clinical efforts, psychophysiological determinants of behavior with special attention focused on childhood autism and attention deficit and antisocial conduct disorders, theoretical, methodological, and practical considerations involved in determining investigatory paths including sampling, design, selection, measurement, data analysis, and pragmatics, and the reactions of children, families, and society to complex and diverse child health problems. Part II addresses assessment and treatment issues. It discusses behavioral treatment of childhood disorders and multiple case examples of commonly used techniques, new developments in pharmacological treatment, and sound guidelines for the consideration of pharmacotherapy and formulations, and a review of preventive interventions. Part III examines specific disorders of childhood and adolescence. It discusses anxiety disorders, affective and mood disorders, mental retardation, autism, specific developmental disorders, conduct disorder, attention deficit hyperactivity disorder, ADHD, and eating disorders, psychological aspects of pediatric disorders, interventions tailored to the needs of the child and family to maximize adaptation and recovery, and substance use disorders ranging from models emphasizing social influences to those focusing on biological vulnerabilities. Each chapter in Part III has an identical structure: clinical description, causes, course, familial contributions, psychological and genetic influences, current treatments, summary, and includes numerous case illustrations. **Doing CBT** David F.
