The Effects of Radiation on High-Technology Polymers Elsa Reichmanis, James H. O'Donnell, 1989
Handbook of Polymer Blends and Composites A. K. Kulshreshtha, Cornelia Vasile, 2002 *Handbook of Polymer Coatings for Electronics* James J. Licari, Laura A. Hughes, 1990-12-31 This completely revised edition remains the only comprehensive treatise on polymer coatings for electronics Since the original edition the applications of coatings for the environmental protection of electronic systems have greatly increased largely driven by the competitive need to reduce costs weight and volume The demands for high speed circuits for the rapid processing of signals and data high density circuits for the storage and retrieval of megabits of memory and the improved reliability required of electronics for guiding and controlling weapons and space vehicles have triggered the development of many new and improved coating polymers and formulations Both the theoretical aspects of coatings molecular structure of polymer types and their correlation with electrical and physical properties and applied aspects functions deposition processes applications testing are covered in the book Over 100 proprietary coating formulations were reviewed their properties collated and tables of comparative properties prepared This book is useful as both a primer and as a handbook for collecting properties data The Effects of Radiation on High-technology Polymers American Chemical Society Division of Polymer Chemistry Workshop, 1989 Handbook of Polymer Degradation S. Halim Hamid, 2000-06-30 Covers recent advances in polymer degradation and stabilization Focuses on the basics of photo and bio degradability Delineates special and general environmental parameters such as solar irradiation temperature and agrochemical exposure Surveys plastic waste disposal strategies such as recycling incineration chemical recovery by pyrolysis and source reduction **Molecular Building Blocks for Nanotechnology** G. Ali Mansoori, Thomas F. George, Lahsen Assoufid, Guoping Zhang, 2007-09-14 This book deals with a bottom up approach to building nanostructured systems where one starts with atoms and molecules which constitute the molecular building blocks MBBs and assembles them to build a nanostructured material Nanotechnology MBBs are distinguished for their unique properties They include for example graphite fullerene carbon nanotubes diamondoids nanowires nanocrystals and amino acids All these MBBs and more are candidates for various applications in nanotechnology These building blocks have quite

unique properties not found in small molecules Some of these MBBs are electrical conductors some are semiconductors some are photonic and the characteristic dimension of each is a few nanometers The examples covered in this book by the sixteen chapters written by authorities all around the world include 1 carbon nanotubes which are five times lighter and five times stronger than steel 2 nanowires which can be made of metals semiconductors or even different types of semiconductors within a single wire and 3 diamondoids a form of pure carbon materials which provide excellent building blocks for positional or robotic assembly as well as for self assembly The applications of MBBs as presented in this book should enable the practitioner of nanotechnology to design and build systems on a nanometer scale The controlled synthesis of MBBs and their subsequent assembly self assembly self replication or positional assembly into nanostructures is a fundamental theme of nanotechnology These promising nanotechnology concepts with far reaching implications from mechanical to chemical processes from electronic components to ultra sensitive sensors from medical applications to energy systems and from pharmaceuticals to agricultural and food chains will impact every aspect of our future

Polymer Membranes in Biotechnology Seeram Ramakrishna,Zuwei Ma,Takeshi Matsuura,2011 Following an introduction to the general concept of membrane separation in Chapter 1 preparation of polymeric membranes is discussed in Chapter 2 The book then describes in Chapter 3 membrane surface activation which is a key step in ligand immobilizations Chapter 4 focuses on ligand immobilization techniques and the organic chemistries behind them Chapter 5 introduces the application of affinity membrane chromatography Finally in Chapter 6 membranes used in biosensors and gas sensors enzymatic membranes used as biosensor and membrane biosensor for waste water treatment will be discussed
