Books in Series, 1876-1949 R.R. Bowker Company, 1982 Metal-Polymer Systems Jörg Florian Friedrich, 2017-12-04

The result of decades of research by a pioneer in the field this is the first book to deal exclusively with achieving high performance metal polymer composites by chemical bonding Covering both the academic and practical aspects the author focuses on the chemistry of interfaces between metals and polymers with a particular emphasis on the chemical bonding between the different materials He elucidates the various approaches to obtaining a stable interface including but not limited to thermodynamically driven redox reactions bond protection to prevent hydrolysis the introduction of barrier layers and stabilization by spacer molecules Throughout chemical bonding is promoted as a simple and economically viable alternative to adhesion based on reversible weak physical interaction Consequently the text equips readers with the practical tools necessary for designing high strength metal polymer composites with such desired properties as resilience flexibility rigidity or degradation resistance *Direct Copper Interconnection for Advanced Semiconductor Technology* Dongkai Shangguan, 2024-06-28 In the More than Moore era performance requirements for leading edge semiconductor devices are demanding extremely fine pitch interconnection in semiconductor packaging Direct copper interconnection has emerged as the technology of choice in the semiconductor industry for fine pitch interconnection with significant benefits for interconnect density and device performance Low temperature direct copper bonding in particular will become widely adopted for a broad range of highperformance semiconductor devices in the years to come This book offers a comprehensive review and in depth discussions of the key topics in this critical new technology Chapter 1 reviews the evolution and the most recent advances in semiconductor packaging leading to the requirement for extremely fine pitch interconnection and Chapter 2 reviews different technologies for direct copper interconnection with advantages and disadvantages for various applications Chapter 3 offers an in depth review of the hybrid bonding technology outlining the critical processes and solutions The area of materials for hybrid bonding is covered in Chapter 4 followed by several chapters that are focused on critical process steps and equipment for copper electrodeposition Chapter 5 planarization Chapter 6 wafer bonding Chapter 7 and die bonding Chapter 8 Aspects related to product applications are covered in Chapter 9 for design and Chapter 10 for thermal simulation Finally Chapter 11 covers reliability considerations and computer modeling for process and performance characterization followed by the final chapter Chapter 12 outlining the current and future applications of the hybrid bonding technology Metrology and testing are also addressed throughout the chapters Business economic and supply chain considerations are discussed as related to the product applications and manufacturing deployment of the technology and the current status and future outlook as related to the various aspects of the ecosystem are outlined in the relevant chapters of the book The book is aimed at academic and industry researchers as well as industry practitioners and is intended to serve as

a comprehensive source of the most up to date knowledge and a review of the state of the art of the technology and applications for direct copper interconnection and advanced semiconductor packaging in general Surface Science Russel F. Howe, Robert N. Lamb, Klaus Wandelt, 2013-03-07 Surface science has existed as a recognized discipline for more than 20 years During this period the subject has expanded in two important ways On the one hand the techniques available for studying surfaces both experimental and theoretical have grown in number and in sophistication On the other hand surface science has been applied to an increasing number of areas of technology such as catalysis semiconductor processing new materials development corrosion prevention adhesion and tribology There is however no sharp division between fundamental and applied surface science New techniques can immediately be applied to technologically important problems Improvements in understanding of fundamental phenomena such as epitaxial growth of one metal on another or the bonding of hydrocarbons to metal surfaces to name just two examples have direct consequences for technology Surface science has also become very much an interdisciplinary subject physics chemistry materials science chemical and electrical engineering all draw upon and contribute to surface science The intimate relationship between principles and applications of surface science forms the theme of this proceedings volume The contributions were all presented as invited lectures at an Australian German Workshop on Surface Science held at Coogee Beach Sydney Australia in December 1991 The contributors all active surface scientists in their respective countries were asked to highlight recent developments in their own areas of activity involving new techniques advances in fundamental understanding or new applications in technology Index of Conference Proceedings British Library. Document Supply Centre, 1999 *Carbon for Sensing Devices* Danilo Demarchi, Alberto Tagliaferro, 2014-10-07 This book reveals why carbon is playing such an increasingly prominent role as a sensing material The various steps that transform a raw material in a sensing device are thoroughly presented and critically discussed The authors deal with all aspects of carbon based sensors starting from the various hybridization and allotropes of carbon with specific focus on micro and nano sized carbons e g carbon nanotubes graphene and their growth processes The discussion then moves to the role of functionalization and the different routes to achieve it Finally a number of sensing applications in various fields are presented highlighting the connection with the basic properties of the various carbon allotropes Readers will benefit from this book's bottom up approach which starts from the local bonding in carbon solids and ends with sensing applications linking the local hybridization of carbon atoms and its modification by functionalization to specific device performance This book is a must have in the library of any scientist involved in carbon based sensing application *Low Cycle Fatigue* Harvey D. Solomon, 1988
