Intended for a one or two semester combined elementary and intermediate algebra course Exploring Introductory and Intermediate Algebra A Graphing Approach is designed to assist students in making connections between mathematics and its applications Its goal is to develop a student's mathematical skills through appropriate use of applications and to use technology to establish links between abstract mathematical concepts and visual or concrete representations The proven Aufmann Interactive Method AIM ensures that students try concepts and manipulate real life data as they progress through the material Every objective contains one or more sets of matched pair examples encouraging students to interact with the text The first example in each set is completely worked out the second example called You Try It prompts students to practice concepts at the time they are presented in the text Complete worked out solutions to these examples in an appendix at the end of the book help students by providing immediate feedback concept reinforcement and identification of mistakes to prevent frustration Technology is integrated throughout the text to assist students in making connections between abstract mathematical concepts and a concrete representation provided by technology Calculator Notes throughout offer tips on using the graphing calculator Eduspace powered by Blackboard for the Aufmann Lockwood Boswell Exploring Introductory and Intermediate Algebra course features algorithmic exercises and test bank content in question pools

**Making Sense of Elementary Algebra** Elaine A. Kasimatis, Cindy L. Erickson, 2000

Reflecting NCTM and AMATYC standards this reform algebra text presents elementary topics in the context of problem solving and concept development Focusing on data equations and graphing students work in small groups to investigate eight core mathematical problems adding skills to their mathematical tools kits through active learning Emphasizing hands on understanding over routine drill the authors incorporate the use of physical objects for developing mathematical models and structures When appropriate scientific calculators are integrated

*College Algebra* Raymond A. Barnett, Michael R. Ziegler, Karl E. Byleen, 2000

Mathematical reform is the driving force behind the organization and development of this new college algebra text The use of technology primarily graphing utilities is assumed throughout the text The development of each topic proceeds from the concrete to the abstract and takes full advantage of technology wherever appropriate The first major objective of this book is to encourage students to investigate mathematical ideas and processes graphically and numerically as well as algebraically Proceeding in this way students gain a broader deeper and more useful understanding of a concept or process Even though concept development and technology are emphasized manipulative skills are not ignored and plenty of opportunities to practice basic skills are present A brief look at the table of contents will reveal the importance of the function concept as a unifying theme The second major objective of this book is the development of a library of elementary functions including their important

properties and uses Having this library of elementary functions as a basic working tool in their mathematical tool boxes students will be able to move into calculus with greater confidence and understanding In addition a concise review of basic algebraic concepts is included in Appendix A for easy reference or systematic review The third major objective of this book is to give the student substantial experience in solving and modeling real world problems Enough applications are included to convince even the most skeptical student that mathematics is really useful Most of the applications are simplified versions of actual real world problems taken from professional journals and professional books No specialized experience is required to solve any of the applications

Elementary Algebra Donald Hutchison, Louis Hoelzle, James Streeter, 1995 This text is written for the introductory algebra course offered at both two and four year colleges At four year schools look for this course in developmental studies programs The focus of this new series by Hutchison and Hoelzle is to make students better problem solvers To accomplish this goal the authors emphasise conceptual understanding They ask students to critically to explore and explain concepts in writing and to extend their understanding through group activities The environmental essays that open each chapter connect algebra to real world problem solving and can be used to stimulate class discussion and promote collaborative learning

**Integrating Research on the Graphical Representation of Functions** Thomas A. Romberg, Elizabeth Fennema, Thomas P. Carpenter, 2012-10-12 This volume focuses on the important mathematical idea of functions that with the technology of computers and calculators can be dynamically represented in ways that have not been possible previously The book's editors contend that as result of recent technological developments combined with the integrated knowledge available from research on teaching instruction students thinking and assessment curriculum developers researchers and teacher educators are faced with an unprecedented opportunity for making dramatic changes The book presents content considerations that occur when the mathematics of graphs and functions relate to curriculum It also examines content in a carefully considered integration of research that conveys where the field stands and where it might go Drawing heavily on their own work the chapter authors reconceptualize research in their specific areas so that this knowledge is integrated with the others strands This model for synthesizing research can serve as a paradigm for how research in mathematics education can and probably should proceed
