

The background of the entire slide is a dramatic photograph of a stormy sky. Dark, heavy clouds are visible, with several bright, jagged lightning bolts striking downwards. The lighting is low, creating a moody and intense atmosphere. The text is overlaid on a dark rectangular area in the upper half of the image.

This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps, as most of these works have been housed in our most important libraries around the world and other notations in the work. This work is in the public domain in the United States of America and possibly other nations. Within the United States, you may freely copy and distribute this work as no entity, individual or corporate, has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant.

**Elementary Meteorology** George Frederic Taylor, 1954. Description of basic weather components: heat, temperature, moisture, pressure, wind, and atmosphere circulation, and of storm structure in three dimensions.      A Course in Elementary Meteorology, 2021-09-09      Weather Elements Thomas Arthur Blair, Robert C. Fite, 1957      **A Short Course in Elementary Meteorology** W. H. Pick, 2015-06-25

Excerpt from *A Short Course in Elementary Meteorology*: This unimposing little book is a remarkable one for it marks an epoch; there are numerous books on elementary meteorology, but this is the first which has been written by a British teacher for a class of students who are learning meteorology as a qualification for their profession. The British Empire has produced some of the world's foremost meteorologists: Hailey Beaufort, Abercromby, Blanford, Eliot, and Shaw, to mention only a few; but until recently no one but a few specialists thought it worth his while to make a serious study of meteorology. But things have now changed; for the war taught us the importance of meteorology in practical life, and the aviator has arrived with his active life in the region of nature which we meteorologists have only looked into from below. Meteorology, from being the hobby of a few and the life's work of a still smaller number of despised official weather prophets, has come into its own, and not only the aviator but the general public is asking for the means to study this neglected branch of science. It is therefore with the greatest pleasure that I welcome this little book and trust that it is only the first of a long series for meteorology is still in its infancy and as it develops, text books must be rewritten or they will become worse than useless. This book has been written by a practical meteorologist for practical aviators and by a teacher for his students. This is an ideal combination and the product is not disappointing. I wish, however, to warn the student that there are many unsolved problems in meteorology and therefore he should not be satisfied with any explanation or theory which the book contains. He has been given the best explanations.

which it is possible to give in the present state of our knowledge limited in some cases by the need to use elementary considerations only All this should however give him a greater interest in his work for it will afford him plenty of opportunities to use his own brains to say nothing of the possibility of his making an important discovery What more could any real student desire About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

**Elementary Meteorology** William Morris Davis, 2015-06-15 Excerpt from Elementary Meteorology Those who are already acquainted with the science of meteorology will need no words of mine to show that the greatest share of whatever value this book may contain comes from my having studied and followed the work of the late Professor William Ferrel of Washington To his remarkable insight and ingenious analysis we owe the best part of the understanding of general atmospheric processes that has yet been reached Those who here first come to know something of the science of the atmosphere and who are perhaps thus brought to desire further acquaintance with it should not fail to study Ferrel's Popular Treatise on the Winds in which his more mathematical essays are reduced to a simpler form Yet after Ferrel an almost equal indebtedness must be acknowledged to Professor Julius Hann of Vienna from whose broad and accurate studies I have found assistance at every turn His *Klimatologie* the standard work of the kind and his numerous special articles have furnished me with much information as well as with many well defined examples of meteorological conditions and processes The names of many other meteorologists to whom acknowledgment is due come to mind while revising the pages of this book which presents the condensed results of my reading observing and teaching during the last fifteen years Some of these names are mentioned on the appropriate pages but in general I have not attempted to make explicit reference to the sources of information that have been consulted believing that in a school book as this is primarily intended to be such references are not of much value especially as they too commonly lead to sources of information inaccessible in school libraries A personal acknowledgment must however be made here to Mr H H Clayton of Blue Hill Observatory for assistance in connection with the chapter on clouds to Mr Alexander McAdie of the Weather Bureau in Washington for his advice in the sections on atmospheric electricity and to Mr R DeC Ward successor of Professor Harrington as editor of the *American Meteorological Journal* for many suggestions in connection with the teaching of meteorology in which he has for some years been associated with me in Harvard College About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the

original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
