Read the Introduction Understanding China through Big Data Yunsong Chen, Guangye He, Fei Yan, 2021-07-14 Chen He and Yan present a range of applications of multiple source big data to core areas of contemporary sociology demonstrating how a theory guided approach to macrosociology can help to understand social change in China especially where traditional approaches are limited by constrained and biased data In each chapter of the book the authors highlight an application of theory guided macrosociology that has the potential to reinvigorate an ambitious open minded and bold approach to sociological research These include social stratification social networks medical care and online behaviours among many others This research approach focuses on macro level social process and phenomena by using quantitative models to statistically test for associations and causalities suggested by a clearly hypothesised social theory By deploying theory oriented macrosociology where it can best assure macro level robustness and reliability big data applications can be more relevant to and guided by social theory An essential read for sociologists with an interest in quantitative and macro scale research methods which also provides fascinating insights into Chinese society as a demonstration of the utility of its methodology *Understanding China's New Common Prosperity* Liu Yuanchun, Song Yang, Wang Fei, Zhou Guangsu, 2024-01-16 This book explains China's new common prosperity policies their significance connotations and goals and explains the economic logic behind these often misunderstood policies First the authors explain the theory behind common prosperity Why is the Chinese government changing its economic policies now and what are its objectives and metrics The authors then go on to explain how the new policies are being designed what the test cases are across the country and how the government businesses families and individuals are working together to promote common prosperity An important book that will help scholars around the world understand China's new economic bottom line This book will be of interest to economists sociologists and sinologists **Teaching in Primary Schools in China and India** Nirmala Rao, Emma Pearson, Kai-ming Cheng, Margaret Taplin, 2013-02-11 This book compares primary education in urban and rural China and India It focuses on how the sociocultural context including educational policy educators and parents beliefs and the conditions under which teaching and learning occur shape classroom pedagogy and determine children's attainment This in depth authentic comparative analysis of the two largest educational systems in the world is a must read for scholars interested in the teaching and learning in these two rapidly developing Asian cultures A common set of questions has been addressed in diverse contexts The empirical work on which this book is based is most impressive videotaping of mathematics and language lessons interviews with parents and educators questionnaires with parents teachers and children and tests of children's mathematics attainment and this done in 3 locations in China 3 in India and 12 schools in total Carbon, Nitrogen and Phosphorus Cycling in Forest Soils Robert G. Qualls, 2019-06-21 The majority of carbon stored in the soils of the

world is stored in forests The refractory nature of some portions of forest soil organic matter also provides the slow gradual release of organic nitrogen and phosphorus to sustain long term forest productivity Contemporary and future disturbances such as climatic warming deforestation short rotation silviculture the invasion of exotic species and fire all place strains on the integrity of this homeostatic system of C N and P cycling On the other hand the CO₂ fertilization effect may partially offset losses of soil organic matter but many have questioned the ability of N and P stocks to sustain the CO₂ fertilization effect Despite many advances in the understanding of C N and P cycling in forest soils many questions remain For example no complete inventory of the myriad structural formulae of soil organic N and P has ever been made The factors that cause the resistance of soil organic matter to mineralization are still hotly debated Is it possible to engineer forest soil organic matter so that it sequesters even more C The role of microbial species diversity in forest C N and P cycling is poorly understood The difficulty in measuring the contribution of roots to soil organic C N and P makes its contribution uncertain Finally global differences in climate soils and species make the extrapolation of any one important study difficult to extrapolate to forest soils worldwide
